The following equipment has hardly been used and is in excellent condition:

DENTRON, Clipperton-L Amplifier w/4ea 572B's, GG, like new, full legal output with manual $650.00

DENTRON, Antenna Tuner, MT-3000A, 3kw, 160-10 meters continuous, Three coax output, tri-filer Heavy Duty Balun, Fused dummy Load, with dual metering, five antenna outputs, small scratch on the side which can be painted over since the panel is removable, with manual, $250.00

D. Raddatz, WA9EUN, 525 Park Ln. PO Box 86, Ridgway, Colorado, 81432-0086, phone 970-626-5111, email draddata@gwe.net

4798. SGC 2020

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-17 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6jn6ba$rdu@nnrp4.farm.idt.net>
Source record: 143902

Have been using the 2020 for 2 weeks now.

I have only been using SSB Phone. No problems there. I have made contact all over the world.

The 2020 is a capable little rig with great receive and excellent audio output (from the reports). Even a friend in Florida said the audio output was good when we had a high noise level and I just was able to get over the noise!

I have begun to lisen to CW lately and I am no expert. But people have asked how it does on CW.

I have had no problems.
On 7.030 three statins were sending CW. I was able to select an individual station from the mix by narrowing the receive band with (BW button - band width) and sometimes using the band pass tuing. However the BW seemed to have the best effect. I could widen the receive to hear both stations or narrow the receive to only hear one station! Again I am not a CW expert. I assume thats just the difference between the transmit of the stations. But it allowed me to select which I wanted.

I dont work for SGC and am not love struck for the company nor do I dislike SGC (after all I bought their product). The 2020 radio stands on Its own performance and has exceeded all my expectations. Its a great radio. After using it I dont think the SGC web page has overstated the performance of the 2020 at all.

I have mastered all the controls (I think) and its easy enough to operate.

I have not been able to operate it on battery yet. Just have had no time.

The receive is as good as anything out there.

If I can answer a specific question I will try. But questions like battery life will of course take some time. I am putting together battery packs to test with (D-cell, C-cell, and Gell Cell). But the answers are going to take a while.

I have a Icom IC-HM10 dynamic mobile type preamplified mic for sale
for $45 shipped. It has the up/down buttons on it. It is a great way to increase
the mic gain for an ICOM IC-706 series radio. I later found one similar mic with
tone pad on it so use it now. This will dramatically increase the audio
over the stock mic that came with the 706. I now drop the mic gain setting in
the 706 to 2 instead of running it full bore. Big difference! If interested

> ARES, RACES and foxhunting.

Dual receive s-meters make it good for fox hunting in non-urban areas, because you can tune one receiver to the 2-meter fox and the other to its third harmonic. Now you have TWO meters working for you, one with a bit of attenuation by its nature!

I have heard that attaching any antenna
> that has +gain will overload the receaver and not preform very well.

Have an MFJ 1717 antenna and have hooked it up to my Comet dual band mobile antenna. Intermod is an issue. I have had the receiver cut out when overloaded on frequency with carrier but without modulation.

> I understand that a mobile would work better but I can only afford one
> radio right now.

On the intermod side, yes. If you're urban... buy the mobile. Rejection is better on most mobiles.

Kenwood TM-V7A was the one I bought last Christmas. It died in 29 days... bad solder joint took out the PLL. I suppose it could happen to any manufacturer, BUT the manufacturer allows the dealer only 10-15 days to "switch-out" a unit versus fix it, and so the dealer would not switch out the unit with a new one. Kenwood's policy is obviously a shortcoming. After 3 weeks in the shop, it came back and has worked fine since.

From: feinstei@earthlink.net
Message-ID: <355fa9fb.1480808@news.earthlink.net>
Source record: 143684

At Dayton, I was chatting with an ICOM technician about the abilities of the ICOM T8A on the 220 MHz band. He suggested the use of a 220 antenna for better reception on this band. He also said that it'll put out .8 watt on the 220 band. Does anyone have to mod to open up the transmit for this band? No flames about mod'ing equipment please, I've heard it all before. Why do I always do it? Because it's there!!!!

From: Pete <PMCGREEV@IDT.NET>
Message-ID: <355FDD8F.2B02@IDT.NET>
Source record: 143686

Question -

The 1000MP came out in 95, and the 1000 is an even older design...
Does anyone know (speculation and educated guesses are good also) when,
or ABOUT when, Yaesu will be rolling out a replacement for EITHER of
these radios?

Also, I've heard speculation that the 1000D is going to be dropped in a
year or so, and not replaced... the MP will be its replacement.... True,
False?

Basically, how many more years do you think the MP or D have before being
replaced with newer models (my past experience is a new Yaesu rig has a
3-4 year shelf life... (890, 900, 990, etc).

Pete

>Sorry,Was late night when i typed that...
>Ok, It is a Mobile - Combination RT74FFW23AH

Okay, according to my service manual and based on your combination number
you've got:

A standard control head.
Standard voltage (+12v).
Adjustable 81-128 watt output.
20 KHz channel spacing.
4 frequency capability with the board for 3 more crystals each TX/RX.
Channel guard and noise blanker.
A "23" split which was designed to operate 36-42MHz.
Standard 5ppm stability.
A high power PA (obviously).

>TX Data= KT-138-A
>RX Data=ER-88-A
>At this time it is on 37.640 MHz.
>Looking to put it on 53.830/52.830 Split...
>
>Greg KC4WPN

Um, I don't want to be a "nay-sayer" but the "23"split is useless for amatuer
operation because it's highest native frequency is 42MHz. You could get the
service manual for it and change what I suspect to be a lot of parts to make it
work, in effect converting it to a "33" split, but you're better off finding a "33"
split radio. Look at the end of the combination number for something like W33AH.
Do keep yours for parts though, because a lot of the parts are identical!

For more information visit http://www.mindspring.com/~otterson/mastr2/
They're primarily a Mastr II site though, but you'll still find a lot of useful
information there!

Good luck!

4830. Intermod

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-18 00:00:00 UTC
From: siderius@total.net
Message-ID: <355FEA0A.AEC6038E@total.net>
Source record: 143689

Just purchased an ADI AT-201, (HT) and performed the RX expansion via the keypad and the intermod is now horrendous. By doing the mod have I increased the odds of being plagued with intermod?
The only way I know of to reset it back to it's factory default (144-148 MHZ) is to do a master reset, not something I hoped I would have to do. Any help would be appreciated..

4831. How to reduce drivepower of FT-225RD ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-18 00:00:00 UTC
From: Rob Sijmons <R.Sijmons@psy.vu.nl>
Message-ID: <355FF727.609F@psy.vu.nl>
Source record: 143690

I want to drive a linear amplifier with the old FT-225RD in SSB
But how can i reduce the drivepower so not to overdrive the linear.
Because things go wrong when i transmit in SSB.

4832. Bencher paddles up and running - Thanks!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-18 00:00:00 UTC
From: see.reply-to@address.com
Message-ID: <A1DA83E8BD5F550B.C6522EC472D6D54D.D3E785D490B16209@library-proxy.airnews.net>
Source record: 143691

Thanks to everyone who replied - my paddles are up and running!

Sorry again for the ignorant post. I'm new to HF (but I learn quickly ;-)
The Bencher manual was a flimsy single-page (multi-language) which included one paragraph of instructions: "Consult your keyer documentation for instructions on setting up your paddles". When I read it, I'm thinking, "I don't HAVE a keyer"

My trusty Yaesu 901dm (built-in Curtis keyer) handled my new paddles well, and I was up and running in minutes. I'm currently only at 10wpm, but working hard for the 20wpm and my extra ticket (passed the Advanced written a while back).

I love CW, and look forward to seeing you guys on the air!

btw: If anyone has time to field more stupid HF questions, here goes a couple more:

a. When a CW op sends a long string of dits - does that mean he made a mistake and is correcting it?

b. Are their any unwritten rules for using Lower vs. Upper sideband on parts of the bands, or is it merely personal preference?

Thanks again!

Dave, The FreeTracker guy

The FT-100 was on display at the Dayton Hamvention. It looks to be slightly smaller than the 706. It was not a funtional unit. The Yaesu rep said there still working on the firmware so all the features of the radio are not known yet. The info sheet said DSP was stock. If I get a chance I will post some of the features.

> Thanx to anyone that can clear this up!!!
>
> KF4TUZ... Mike, 73's.
I spoke with a guy at the Dayton Hamvention who performs MODS on several radios. He said the T8A will transmit about 1 watt at 220MHz but the receiver sensitivity is down. He made the comment that it was better at 220 (receive) than the Yaesu FT-50R.

If the repeater is local you can work it.

Ken, N1KK

4837. FS: Yaesu FT-51 UK Version (70-999 Mhz uncut)

My concern on the 2020 - SGC seems to be selectively distributing
them. According to the local HRO - All of HRO only got 3 so far...
Who has them on their shelves. I can't even find a detaled spec sheet.

How much current does the receiver draw?

It sure does sound like a nice little radio though....

4840. Re: IC-706MKII on the road

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-18 00:00:00 UTC
From: Rick <rickmuddX@teleport.com>
Message-ID: <01bd8266$568d0740$50806ac6@dad>
Source record: 143699

depends on what you're trying to do. The menuing is convoluted so if you are trying to program offsets, set tones, adjust cw speed while motoring, forget it...I use mine all the time mobile. I tend to pick a band and operate within the band so the only adjustment is tuning, volume, etc. It is a great rig for that type of use. Band changing is also easy. If you have a multiband hf antenna then even that is not a problem. This is a long winded way of saying the the routine stuff is easily accomplished while driving. My other advice to people is "don't be in such a hurry that you can't pull over." I use single band antennas so I pull over frequently. But I like to stop often when I travel anyways...

You will love the radio.

I've just sold a UHF MC80 for 15 quid - bad luck.

A Storno CQM 5662 goes quite happily at 9k6, and we also use Kantronics
D4-10 radios for 9k6 too. The latter is capable of 19k2.

Cheers !

Gareth.

This is too weird. I just blew up my PRO-43 in precisely the same
manner! The backlight works, a pop is audible when the scanner is
powered up, but all CPU functions are dead. No speaker audio, no
LCD activity, etc. The most I can make of it is the AA batteries
I temporarily placed in the scanner (to replace rechargables that
had gone dead) forced too much juice up the scanner's yingyang.

Your friend wouldn't have been at the San Luis Obispo, CA train
terminal when this happened, was he? Maybe if he was, we could
pass this off as The Curse of The Amtrak Conductors Who Hate Train
Passengers Listening to Their Personal Communications. <g>

To the swan enthusiasts:

I am the proud owner of a Swan 700CX. I would like the wiring diagram for a D-104 Microphone to the phono plug.

Also, I am missing the accessory plug that goes onto the back of the radio. There are paper clips being used as jumpers....does anybody know the explanation of which pins must be jumpered for proper operation? Is there a place I can get a replacement accessory plug?

Thank you for your help, and I hope to be pleasantly adrift with my new 700CX later this week.

73,

> your local Amateur Radio club recommend?

duh. I didn't specify where in California I am sitting at (I work in San Jose and live in San Francisco) since I figured the popular bands would be the same all over the state.

And like I mentioned before in my original post, I haven't been active in a number of years, so I'm not involved in a club at the moment. I wanted to start getting involved in my old hobby slowly again, not go whole hog & join a bunch of clubs or start doing CW again (which I'm sure I will, on both counts, although I'm sure the sight of a dipole hanging in downtown San Francisco might piss off a number of my neighbors, not to mention what it'd do to their TV reception).

Thanks again for any help & suggestions.

Hi,

I would like to attain a Tektronix AM511 or 7K11 CATV pre-amplifier
plug in.

The are units are identical with the exception of their being designed
for different mainframes.

I would prefer the AM511 as it is a TM500/5000 plug in.

If you know where one might be lying around at a fair price, please
email me directly.

Best regards,

Brian Henry, WB6QED

I've searched Deja-news and the web for info about modifying the g5. There seems to be a concensus that cutting the blue wire will expand TX capabilities. There are also rumors about a keypad mod and a 800Mhz mod.

Does anyone know for sure one way or the other about these rumored mods?

If it must be passive and broad band and relatively efficient (low
loss), I suggest that you use a switch and not a combiner.

Would you describe the application?

>The Bencher manual was a flimsy single-page (multi-language) which included one
>paragraph of instructions: "Consult your keyer documentation for instructions on
>setting up your paddles". When I read it, I'm thinking, "I don't HAVE a keyer"

I apologize if my first response was too blunt. You should consider reading the radio's manual before you attach any accesories to it. I don't think my paddles even came with a pamplet, but the radio's manual details how to hook them up.

>My trusty Yaesu 901dm (built-in Curtis keyer) handled my new paddles well, and I was
>up and running in minutes. I'm currently only at 10wpm, but working hard for the
>20wpm and my extra ticket (passed the Advanced written a while back).
>
Keep pluggin after it. I'm an advanced holding steady at 15wpm.

>a. When a CW op sends a long string of dits - does that mean he made a mistake and is
>correcting it?
>

That's what I'd interperate. Sometimes sent a little out of time too (not always sent by holding down the dit paddle).

>b. Are their any unwritten rules for using Lower vs. Upper sideband on parts of the
>bands, or is it merely personal preference?

There are no concrete rules on this. I think the practices we follow now stem from old receiver capabilities. Anyways 160, 80, 40 use LSB, and everything else use USB.

I'm not sure, but I think some satellite transponders may invert your spectra, so you may need to tx USB, and rx LSB.

I have seen some intrest lately in DDF's, in particular from Agrelo Engineering. I thought I would share my experience with you.

I work for a university, and we have a project where I thought an RF direction finder would really help us out. I researched things out there, and found a couple of companies. One of them was Agrelo Engineering. Their product was was medium priced, and looked like it would be OK. I would have prefered one of the military types, but right now their cost is prohibitive.

I put in a PR, and we ordered it. That is Dec 97! I have made numberous calls (> 20), once in a while actually getting through. The majority of excuses they give is that UPS is not delivering properly. Actually, Agrelo has never been able to give me a correct UPS tracking number so I could do some checking.

My accounts payable office tells me that they charged our corporate credit card twice! That was in early Jan 98.

Needless to say, I am very dissapointed.

This is not meant as vendor bashing, but this is a warning: if you are planning to business with them, buyer beware!

If you tap around the oscilator (with a plastic object ie a pen)
lightly you will find the couple of parts that are vibrating. I am
putting my money on the 3.5 turn coil. Try to make the leads shorter
and/or use wax as it was suggested on another post to dampen the
vibration. You might have noticed in some receivers the coils have
some sponge-like material and was all over the place; that's what it
is used for; mechanical stability.

Source record: 143783

I am in a position to buy a FT900CAT with the optional CW filter.I an add the optional SSB filtewr as well.
I now own a IC735 w/foxtangos, fl32a cw filter and keyer
(I have the PS50 and the SP3 speaker, not to used in this analysis, however).
It is a nice system.
Is the FT900 CAT a better rig?
Consider the absolute operation of the rig, Rx sensitivity, selectivity, image rejection. This is for mobile operation primarily.]
The Auto tuner is nice, but not a consideration in this analysis as Ill be using a screwdriver HF antenna.
RSVP
tnx
Jay .

I have an Icom IC735 in excellent condition for sale.
It is as close to perfect as I've seen,
Electrically, mechanically, operationally. It looks just as great.
I also have available the optional FL32A cw filter, and the optional keyer as
well.Further, I have the matching PS50 power dupply and the SP3 speaker.
I have the original boxes for all, as well as the manual for the IC735.
I am asking:
$600.00 for the IC735
$145.00 for the PS50
$ 50.00 for the SP3
$ 75.00 FL32A CW filter
$ 75.00 keyer
I will not brake up the setup until the IC735 sells.
$155.00 for the SM20 microphone (new in the box), never used.
All prices are OBO and do NOT include shipping.
tnx
jef

I honestly do not know why I am replying to this....but here it goes....

Our founding fathers actually expected the government to probably get out of control, and wanted the people to have the rights to gain it back, "The right to bear Arms". The right to bear arms is "necessary to the security of a free state". The problem being you may find this to be a "free state", but many of us are finding it increasingly restrictive.

As a matter of note, most world dictatorships and monarchies start by relieving the public of there weapons so they may seize and maintain power and control. Its in the history books, and in the news.

I do not own a weapon, have no immediate desire to purchase one, but find that most anti gun ownership lobbies to lack a logical basis, usually spouting gun related deaths without mentioning that if a gun was not available a pick axe might have been used to the same affect.

Regards

Christopher Cox

I used one when lived in zone 2 (VO2AA) for several years, and had nothing but success with it. Great on 10/15 not great on 20 but much better than dipole.

I wouldn't hestitate in getting another one!!!!

4881. DSP on the FT-1000MP - How Effective

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-18 00:00:00 UTC
From: Pete <PMCGREEV@IDT.NET>
Message-ID: <3560F9DA.2D92@IDT.NET>
Source record: 143790

I am looking for opinions on how effective the DSP system is on the 1000MP. Does the NB feature get rid of background noise? How about the adjustable contours? Any comparisons to other rigs or add on DSP boxes (timewave, NIR, etc) is appreciated.

Thanx -- Pete

Ok... Rail... Now this is really smart. Only rail transport?
Picture this:
A railroad line, running to every Winn-Dixie, Bi-Lo, Wal-Mart,
SAM's, shopping mall, ad nauseum.
Don't forget fueling the trains.
And of course, don't forget the total pain-in-the-ass of waiting
at a RailRoad crossing EVERYWHERE YOU GO, and the poor guy who
becomes a statistic thinking he can beat the train through the
crossing.
SURE, we could totally eliminate the trucking system and replace
it with rails...
REALLY bright.

According to the Belden Master catalog, it is an RG-11/U triaxial video
cable. Polyethylene insulation between braids, black polyethylene jacket.
100% sweep tested 5 to 300 MHz.

Center conductor:
14 GA./ .064" dia. bare copper
2.5 ohm/M'
8.2 ohm/km

Foam Polyethylene insulation
.285"/7.24mm core O.D.
.475"/12.07mm nominal O.D.

2 bare copper shields with 95% coverage each
1.4ohm/M' each
4.6ohm/km each

Nominal impedance:75 ohms
Nominal Vel. of Prop. 78%
Nominal capacitance: 17.3 pF/ft. or 56.8 pF/meter

Nominal attenuation:db/100" db/100m
1 MHz .17 .56
10 MHz .35 1.2
50 MHz 1.0 3.3
100 MHz 1.5 4.9
200 MHz 2.2 7.2
400 MHz 3.2 10.5
700 MHz 4.6 15.1
900 MHz 5.2 17.1
1000 MHz 5.4 17.7

Barry, what kind (if any) headphones do you use with your FT-847? I've tried 16 ohm phones (as well as 300 ohm phones) and neither give me enough audio to hear the CW sidetone loud enough. If I plug the phones into the audio output on the back of the rig, I am fine (with either phones).

Hi all!
I'm working on a project that requires a very small 2m FM receiver. The smallest I have seen so far are in commercial WALKMAN\radio units, but I really need it smaller. If possible I'd like to get it down to about 1 x 1 inches. Multiple boards can be stacked on top of each other but I'd rather it not be any larger than 1 inch thick. I'm trying to make a pager that goes off when it receives a DTMF tone (or series) and sets off a beeper and/or a flashing LED. The pager unit itself consists of a PCB about 1 x 1 that uses a 567 tone decoder and a 555 timer. The real problem is the receiver. I don't know if it can be built small enough. Does anyone have any ideas or know how I could modify the receiver of an old motorola commercial pager to work? Thanks for your help! Please post responses to rec.radio.amateur.homebrew or mail them to aporr@coil.com.
Thanks a million!

Come over to talk.politics.guns and let us have at you for a while,
or you afraid to go where the real discussion about guns and the second
amendment really is?

>Here is what it REALLY says:
>Amendment II
>
>A well regulated militia, being necessary to the security of a free
state,
>the right of the people to keep and bear arms, shall not be infringed.
>
"The people" are individuals unless you only believe that
collectives have rights and individuals do not.

>It says NOTHING about INDIVIDUALS, N O T H I N G .
>
Yes it does. Who are "the people"? and don't give me this crap
that "the people" being defined as only the National Guard.

>>Numerous writings by our founding fathers state that
>>the prime reason for this right of citizens to own
>>guns is NOT to promote hunting or sport shooting,
>>NOT just for self-defense against criminals, but,
>>and most importantly, for defense against
>>GOVERNMENT TYRANNY.
>
>
>
>Where is that stated?
>

"The right of the whole people, old and young, men, women and boys, and not militia only, to keep and bear ams of every description, and not such only as are used by the militia, shall not be infringed, curtailed or broken in upon, in the smallest degree;...any law, State or Federal, is repugnant to the Constitution, and void, which contravenes this right..." 1 Ga. 243 (1846)

"The right of a citizen to bear arms, in lawful defence of himself or the State, is absolute. He does not derive it from the State government. It is one of the "high powers" delegated directly to the citizen, and 'is excepted out of the general powers of government.' A law cannot be passed to infringe upon or impair it, because it is above the law, and independent of the law-making power." 24 Tex. 394 (1859)

>>gun control debate clearly shows just WHO are
>>>the patriots, and WHO are the traitors to America.
>
>Correct, YOU
>
How many of the estimated eighty thousand to 2.5 million persons that have used a gun per year in defense of themselves as reported by the NCVS and others are you willing to sacrifice to those that would have done them grievous bodily harm? Would you tolerate the increase in violent crimes and deaths as long as the potential victim couldn't defend themselves with a gun? Are you satisfied that the increase in deaths caused by violent criminals will justify making guns illegal?

Hi

I have a number of GP300 and GM350 Motorola radios that I require programming i.e. with different frequencies in the 169 MHz bands. I am in the UK and would appreciate it if anybody could help.

Please mail me direct and may I apologise if this is not the kind of newsgroup where I should be asking, it was just a thought.

Thankyou.

average'Average' means being run-of-the-mill,
mediocre, insignificant, an also-ran, a non-entity.
'Average' is the top of the bottom, the best of the worst,
the bottom of the top, the worst of the best.Which of these is you?
Being 'average' is the lazy person's cop out,
it's lacking the guts to take a stand in life;it's living by default.
Being 'average' is to take up space for no purpose,
to take the trip through life but never to pay the fare.
Being 'average' is to pass one's life away with time,
rather than to pass one's time away with life.
To be 'average' is to be forgotten once you pass from this life.
The successful are remembered for their contributions,
the failures are remembered because they tried,
but the'average', the silent majority, is just forgotten."

No, nor does Bank Robbery constitute a major number in violent crime
related deaths.

> No kids ever killed teachers and students with a pick ax.

Really...I find that surprising, world wide? How about Rwanda?...BUT if you
do your homework you will find world wide that violent crime related deaths
is not attributed to gun ownership...indeed just the opposite was found to
be true. A fellow at OSU finished his findings last your if you are
interested. It is gruesome.....

Take the 'receive audio' from pin 16 of the TBA 750, and the 'transmit audio'
is applied through a resistor of between 4k7 and 10k to the varactor diode
across the 'transmit' crystal.

Cheers !

Gareth.

Included in the Bill of Rights is the second amemdment. The Bill of Rights are viewed as individual rights. Your opinion that 9 are individual rights and one lone amendment is a collective right is incorrect.

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 firm for this beauty. It is a very useful radio and will give you years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

I have a Kenwood TM255A 2 meter sideband rig and it need's the receiver and transmitter frequency to aligned to the same frequency. People are complaining that I am off frequency when transmitting. There is no frequency shift control to adjust this. So it must be internal.

Does anybody have a copy of the tuning procedure with board layout. If so can you scan it and send it to me.

Thanks in advance

Bill Reid

With Burt becoming an increasing annoyance on our bands, Why Communicate (YCOM) has unveiled its new HF/VHF all mode rig with aBDSP. The YCOM 15083856962 features automatic Burt notch for CW and SSB, and a anti-Burt noise blanker for HF. On 2 meters the rig offers up a Burtrodyne-proof receiver with third order Communist filters to prevent front-end overload.

The anti-Burt DSP offers both high and low Burt cut offs, to be used depending on how whiny he is at any moment. Automatic CW and SSB zero beat are included to allow users with appropriate optional filters to eliminate offending signals completely.

Optional accessories: a large detachable heat sink also useful for throwing at ham flea markets and auctions, a mobile whip antenna without saftey tip also useful for poking eyes out, and mousetrap/cw paddles/hand buzzer for "guest operators."

I found out why mine only worked on CW. Someone modified the pot that
allows you to set the output power. Sorry about the bad info earlier. Glenn
you may have the same thing in your radio. I have sold the HTX and got a
Lincoln in it's place.

Steve

~~~W4ABC Writes...

Read those words and choke Burt. Knowing that you come from an overprotective (overbearing) anti-gun state like Massachusetts, I have no doubts who does the thinking for you Burt. I was born there, and I'm not looking back.

My brother still lives there, and he tells me that there is a proviso that states that if an intruder enters your place of dwelling, that you must first attempt to flee. Talk about "BULLSHIT." Here in Florida, you are already eating the wrong end of Mr. Mossberg's M590A1. It is not there to kill, but to "STOP" the unlawfull individual's entry into my home. Sometimes they don't live to draw their own gun though Burt!

Since we are talking about the rights of the "Individual," "Groups," "People," let's talk about one well known individual in history, that disarmed his country so that all would be safe from the ravages of the "gun." His name was non other than "Adolf Hitler."

Burt if you are serious about being "taken seriously," then may I suggest a couple of books that you may wish to peruse.

"More Guns - Less Crime" by John R. Lott Jr. The University of Chicago Press

"The Second Amendment Primer" by Les Adams Palladium Press

Let me tell you the story about this caveman that beat his wife on the head with a gun...

Mint condition only 2 months old (I have the sales invoice). 2m/440,
with PL tone board installed and external speaker, manuals etc. Reason
I'm selling is I'd like to get a Yaesu FT-847.

My cost was $2100. will sell for $1795. firm, you pay shipping.
Serious inquires please.

Mike

4936. Re: Yaesu FC-10 auto tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-19 00:00:00 UTC
From: aaker@NOSPAM.apple.com
Message-ID: <aaker-1905980921060001@aakema.apple.com>
Source record: 143614

Hello Ian,

I have used a Yaesu FT-840 and an FC-10 tuner for about 3 months now.
I bought the tuner because I was used to an *automatic* antenna tuner in my
previous Yaesu FT-990, and I didn't want to fiddle with settings on a
manual tuner every time I changed bands. I have also previously used
manual tuners such as the MFJ-989.

I use a half-wave vertical, center-fed, sized for 14 MHz and fed with coax.
Without the tuner, it works on 14 MHz and 21 MHz, i.e. the "HI SWR" light
does not come on. With the tuner, it works on all bands 7 MHz to 28 MHz.
I still get "HI SWR" on 1.8 MHz and 3.5 MHz, which is understandable given
the little amount of metal I'm trying to load on those frequencies. It's just
too far out of range.

The tuner automatically changes its tuner settings as I use the
FT-840. After initial tune-up on each band, it remembers the settings,
and it takes less than a second to change bands. It is clearly designed to
match and work with the FT-840, and it does. I don't know the max. power rating,
but it works fine with the Yaesu FT-840.

I bought it used for $200 from Murray Neece who frequently trades used
gear on these newsgroups, (thanks Murray!), and think it is a worthwhile
accessory,
especially compared to a manual tuner. The only limitation I see is
that it requires coax input, no balanced line or balun connections like
many manual tuners have.

Summary: It allow me to operate on more bands, and is convenient since it
operates automatically. It cost only a little more than a manual tuner.
I'm satisfied. Nice work by Yaesu.

4940. FT-920 VFO Tracking?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-19 00:00:00 UTC
From: K4REG@my-dejanews.com
Message-ID: <6jserj$33n$1@nnrp1.dejanews.com>
Source record: 143618

Item #44 on page 31 of the owner's manual of my FT-920 states the following:
"VFO Tracking" operation, whereby VFO-A and VFO-B are "slaved" under control
by the VFO-A Tuning Knob (press and hold in the VFO-A [Lock] key while
rotating the tuning dial to engage VFO Tracking).
I have tried this, and several variations of this command sequence without
having the "slaving" function engage in any way.
Does anyone know if the manual is wrong, and the "Tracking" can be engaged by
doing some other command?
I would surely appreciate any and all help.
Best 73s to all.

Sure they are. I was trying to get you to think of joining your local amateur radio club - and acquire some real, honest, first-hand info from folks who are actually DOING what it is you want to do!

As opposed to us here blindly telling you that the Yaseu FT-50RD is the only way to go...or a Standard C558a...<grin>.

I keep asking Yaesu the question. The answer I keep getting is that right
now the MP's are outselling the D's by a number of times. The intention is
to eventually drop the D and keep the MP. But, if the the MP is ever replaced
no one at Yaesu seems to know with what. I've had a D for 8 years and I still
think it's a great radio. Never had a problem with it. Can't justify
replacing it with anything currently on the market; wouldn't gain much. I
use a Timewave DSP 59Y with it (built into the speaker).....Ron, W4VR

HELP WANTED:

PREMIER Communications, the manufacturer of the popular ADI line of radios and the PRYME/PREMIER line of accessories, currently has immediate job openings in both the sales and technical support roles.

Sales duties include maintaining relations with the PREMIER dealer network over the telephone and through personal visits, and promoting the PREMIER product line by attending various amateur radio shows and conventions.

Technical Support duties include logging in and examining returned merchandise, handling customer's questions on the telephone and by e-mail, and assisting in inventory control and shipping when needed.

Technical background equivalent to a Technician class amateur license is required, as is familiarity with MS Word and Excel. No other experience is needed.

Benefits for both positions include medical and optional dental insurance, as well as room for advancement with an up and coming company in the amateur and land mobile radio business.

Just got back from Dayton where I saw the FT-100 to be release this summer. This radio is basically a 706 with 440 besides the HF. 6m, and 2 meter bands. QUite a small package. As far as I was able to determine, it does not support cross-band duplexing like a "normal" mobile dual-bander. ANyway, I wonder if anyone else has seen this at the show and has any thoughts on it.

Well, I recently got a wake up call. Tuesday night I was arrested in Newington CT outside of the ARRL headquarters. Apparently, I was almost naked and assaulted David Sumner as he left work for the day. I say apparently because I was very, very drunk and remember nothing but throwing my clothes out the window on I-95. In addition to assault and indecent exposure, I face DUI charges and illegal possession of a firearm. God only knows what I intended to do, but there was a pawnshop receipt from a Boston area pawnshop, and a box of rifle shells. I want to thank all you guys for not letting me get by with my trolling and relentless ham bashing. I realize now that I have led a frustrating, boring life, and with the help of the treatment program my school's EAP has sent me to, I hope to pick up the pieces of my life someday. It all went wrong after high school, when I was no longer president of the ham radio club at South Dennis High, and couldn't really cut it in college. Ham radio was my life, I had no balance, so eventually, when I realized how empty my life had become, I lashed out. I am truly sorry if I have caused anyone here any pain or anger.

Burt

I would like to establish a ballpark value for a couple of boat anchors.
(I know but I don't have access to that group.)

BACKGROUND
Items 1 through 4 have been in a damp basement and unpowered since sometime
in the late 60's. All are complete except as noted. None have had any
major mods. Condition reflects storage environment i.e. some rust.
Other than that I have no idea about operability.

Item 1 Collins 75A-1 Rcvr SN 4XX, Complete except several tubes are missing.
Some damage to front dial and meter glass.

Item 2 Collins 32V- Xmiter SN 9XX

Item 3 Hallicrafters SX-100 Reciever. Still has "Hallicrafters" tubes.

Item 4 Hallicrafters HT-32B Xmiter. Dial overlay has flaked off.

Any help establishing a value for these units would be appreciated.

Thanks

Pete

I had a 1000MP and a 1000D at the same time, so did one of my friends, and we both sold the 1000MP's As far as I am concerned there will never be a replacement for the FT 1000 D .. I had a FT1000 for a while and now own a D modle... I love these radios...
I think that the DSP on the MP makes everyone sould like they are under water.... and I also think that the MP is WAY overpriced. You could get a good used 1000D for the same price as a good MP... Put me down for the 1000D for a long time to come.
But of course I could be wrong, ha ha...

Trade: Tempo One (greyface) with matching power supply speaker for

Realistic HTX-100 10 meter mobile radio w/ mount and mike.

Tempo One HF transceiver needs some repair. Finals appear to be bad.

Power supply is putting out all the proper voltages. Underside of the

radio chassis is super clean. Top side of chassis is a little dusty. No

parts are missing. VFO assembly is in good shape and works. The cabinets

to the radio and power supply/ speaker need repainted but are dent free.

I have photocopy manuals with schematic.

I want to trade this gear even for a Realistic 10 meter mobile w/mount

and mike. Must be in good condition and working.

E-mail me at crslex@iglou.com or KB4AEP@juno.com

Thanks.....Mark KB4AEP

Well, someone's got to say it. . . check your dilithium crystals! :-)

Seriously, I recall someone mentioning to be sure your speech processor is turned off. On FM, it wouldn't do you much good. Read your instruction manual for tips on operation.

Another possibility is RF leaking into the audio circuits, probably via the mic cable. This could be caused by a poor ground (change the length of your ground lead or try a different ground), operating too close to your antenna (back off), or a length of coax that puts a current node at your antenna connector (you could change the length of your feedline by a few inches). A small disc capacitor across the mic leads might also help if it's RF in the audio.

4973. Re: FT-847 with ATAS-100 Final Review - Update with Instructions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-19 00:00:00 UTC
From: Len <umina@ultranet.com>
Message-ID: <6jtc24$se9$1@ligarius.ultra.net>
Source record: 143651
Cross-posted to: rec.radio.amateur,rec.radio.amateur.antenna,rec.radio.amateur.equipment,uk.radio.amateur

The ATAS-100 and FT-847 make a powerful combination for mobile use. The pair is so fun to use that you will want two FT-847's - one for the shack and one for the car! Of course this may cost as much as a small car, but that's not the subject of this post!

What is the subject is the ATAS-100. This little antenna, along with it's associated documentation can be quite a challenge to understand and get working. In fact that's where this started out, because I was having a lot of trouble with mine, and instructions and hints will follow.

First, I rate this antenna highly as a mobile antenna. It is not too big, performs well and has good bandwidth. Since it covers 450 to 7 Mhz its wide band features make it one of the better adjustible coverage antennas on the market. There are others, like the SGC unit, which I also own, that tune faster, but are much larger and do not cover the VHF/UFH bands. Other units include 75 meters but give up the higher frequencies. If you must have 75 then this antenna isn't the way to go. If 75 is a sometimes thing trust me with 450, 2M, 6M, 10M....40M you will find something to do and someone to talk to!

The tuning time for this antenna is a bit slow, especially if you start from fully retracted. It's important to understand the directions when using this antenna and they are not that clear in the sheet or the manual. So here's the basics.

First, when you install the antenna be sure to change the main control menu 31 (tuner) to antenna. At that point your display probably will not show the "tuner" icon.

When you first push the tuner button (left side of rig) the tuner icon should light (upper right side of display). The antenna is probably fully retracted if you just got it out of the box. Now comes the part that is a bit tricky.

The tuner button actually has three functions. The first function, when no icons are visible is to turn on the "tuner" icon and prepare the rig for tuner operation. This enables the second two functions of this button which are always enabled as long as the tuner icon is lit. Read that again if it doesn't make sense.

The second two functions are executed depending upon how long you push the tuner button.

If you make a short push (a dit at 15 WPM) then the antenna will retract. Since the rig doesn't know where the antenna is when you give it this RETRACT command, the "wait" icon will be visible for a period of time that

has no relationship to the current length of the antenna - even if it is fully retracted. That means if you tell the antenna to retract the timer starts running, the retract voltage is sent to the ATAS-100 and the antenna retracts. Since the FT-847 knows how long it would take if the antenna were fully extended (CW portion of 40 Meters) it sends the signal for that period of time and shuts off the wait icon.

You can manually stop the antenna from retracting if you wish by pushing the tune button again. This leaves the antenna in an "untuned condition" however and impacts the operation of the second function as explained below.

If you make a long push (a dash at 5 WPM) then the antenna will enter tune mode. This can be VERY confusing though because how tune mode is executed depends upon several things. First, if the antenna was left in an untuned condition IT WILL RETRACT FOR THE FULL TIMEOUT PERIOD (even if it's already fully retracted or close to it when you give the command). When the timeout has occurred, the transmitter will come on in low power mode and the antenna will expand until a good SWR is obtained.

If the antenna was already in a tuned condition (on any band) then it will turn the transmitter on in low power mode and move in the correct direction (up or down) depending on the frequency you moved to. Tuning in this instance is fairly quick. Band to band is just a few seconds.

If the antenna was already in a tuned condition and is still showing low SWR when you give it the tune command (long push, 5 WPM dash) you may not see the transmitter come on because the SWR is checked first and if it's low enough the sequence will be aborted. If you only change frequency a few KC then this is likely to be the case.

If at any time the antenna becomes "untuned" for any reason - like an infirm push of the tune button that results in a short push instead of a long push on the button, it will go through a complete untuned cycle - full retraction and then tune from the bottom up.

After you use the antenna for awhile you will learn to be careful about telling it what you want. A quick push is good shorthand to get you to 2M/70CM as the antenna operates there when fully retracted. It is also nice to get you on 6M because tuning from the retracted position is fast for this band and no carrier is radiated if you reset to compact mode. (The other way to get to 6M from say 40M, tuned, would be to request a tune cycle with a long push of the tune button. This will transmit a carrier while the antenna slowly winds down from fully extended until it gets to resonence. Not too good if you are on a repeater frequency, and not good amateur practice if it can be easily avoided.

Bottom line, you will like the FT-847 and ATAS-100 combination. The only thing it's missing is a slow scan image accessory for the dashboard and a camera, and a packet TNC with APRS. At that point you could send pictures of your location, traffic, accident scene, disaster etc. and you could....well that's coming soon I hope - just like a walkie with SSTV built in - or ATV for that matter!

Wow, is ham radio fun or what!

73,
Len

Could someone please give me a breakdown of the following Motorola model number? I beleive it's an MTX800. I need to know power out, number of systems, conventional or trunked, etc, etc. I think it's only single system since there is nothing but a volume/on-off knob on top. No fleet/sub-fleet switches. Any help is greatly appreciated. Thanks!

Model #- H25JGB5170DN

Bill,

I'm puzzled. Why can't you use the RIT to deal with this problem? It
will let you xmt and rcv on slightly different frequencies. I have a
255 and it does have an RIT.

Elsewise you can order service manual from Kenwood.

Phil

Are they new?
How much you want for some? I have a line on some @ $2 each- is that around what you were hoping for? BTW, I don't think it's wise to advise people that they are good @ 2.2kv (or even half of that) as I believe they are rated for an extremely short life at rated voltage (they were basically a throw away part).

Ethan

Robert

The 706 is a great choice for mobile operation. Just dont try to get to carried away with trying to program it while on the road, that is better done sitting still or in the shack. Trying to access all the menu features is just too complex while moving.
I use mine with the High Sierra " screw driver antenna" which is tunable from 75 meters to 6 meters from the cockpit while on the move. I routinely QSY on all of the HF bands with 3 easy steps and feel perfectly safe doing so. You will not need a tuner either if you use the High Sierra it will tune to a SWR less than 1.5:1 on any of the HF Bands. The 706 and a "screw driver antenna" arer a deadly combination.

Those kind of caps are only good for pulse-discharge applications, and have a short life expectancy when used as a filter cap in a power supply. The AC ripple current causes them to overheat pretty quickly. Great for railguns/photoflash/exploding wire applications, though!

I just passed my test too.... and with a little guidance from my HAM roommate
and his HAM fiance, I purchased the Alinco DJ-G5T ....
they both have older alincos, so I took that as a good sign. At Dayton, it
cost a little less than the kenwood and other radios I looked at. It seems to
be a fairly nice radio.

I've recently upgraded my ticket and am ready for HF... I'd like to work some kind of swap for an IC-706 MKII, hopefully with CW filter and tuner, for my 2 month old Drake R8B receiver.

This receiver is in as-new condition, including MS-8 speaker and internal VHF converter, all original manuals and packing included. This was purchased directly from Drake and is in flawless condition. Total purchase cost was $1499

Although my first choice is a 706 MKII, I'm open to any realistic swap with cash or other goods going either way. My interest is in a good, current, minty HF rig with original docs. No tube rigs please, as I plan to do a lot of portable operation.

I would check with the manufacturer before giving up on them, but most of those capacitors really don't hold up very well when passing appreciable ripple current. I learned this from experience. I had a bunch let go in a large HV power supply once, and it made a REAL mess! Mineral oil and bits of foil and paper everywhere! (at least there were no PCB's in them) When one of those shorts out, the spark discharge that usually goes into the flashtube or laser tube is dissipated internally, and generates a lot of gas pressure inside the can.

Main reference oscillator in a W21AT is located at the right side of VHF main board, it's mounted inside a metal can soldered at 90 degrees to VHF board. It is impossible to adjust the trimmer cap inside it without taking the VHF board out, and reconnecting it with a suitable service extender cables. To make things worse, due to miniature design it is very likely that inexperienced person will damage the radio while taking it apart. Consider sending it to a repair shop.

Tracy,

I also ordered a DFjr from Joe last November, and after numerous phone calls and emails, most unaswered, my credit card was charged for just over $500 (of which $128 was for FedEx to Spain). This was 28 days ago, and I still have not received anything.

For the last few months until I got the charge, I also got the 'it must have gotten lost' excuse, although he could not explain why he had sent a unit
with no charge, and could not give me a tracking number either.

I am also very dissapointed, I was expecting to get a nice DF unit for Search & Rescue work, but it seems not likely. I thought I was the only one
in this situation...

I wrote a post in the Hamnet forum in Compuserve, to the tone of your post here, and got a 'reprimand' from one of the sysops for posting such

criticisms apparently 'without reason' - when I have been waiting almost 7 months and a month ago my credit card was charged and still nothing.

Joe's answer phone tells he's going to be back from some exhibition on the 20th, so I'll try again. If I don't get any answers soon, I will consider legal
proceedings, or whatever action may be appropriate - I don't mind waiting as long as it takes, maybe even paying a small deposit aswell, but I don't see justified the full charge plus the shipping when the unit as not even been shipped !!
Neither UPS, FedEx or TNT have been able to find a parcel originating from his zip code going to Spain, so I am sure it has not been sent.

I hope your situation gets resolved, and let me know if you plan on taking any further action on this.

Kind regards,

Michael Puchol
Aeronautical Enginner

You can take any dictator. This is certainly the most extreme (and most undemocratic) way of a government to control "its" people.
You should be careful, however, to compare the government's monopole of using force, as it is used in (quite democratic) countries like Switzerland, Germany or Great Britain with a dictatorship like Nazi-Germany. It is rather arrogant to condemn any idea other than Your own one. The American system of justice may be one way to go, but there are other democratic systems in the world, which realize the same idea of a free society in a slightly different manner.
BTW, do You have a reference for what You mentioned above? I have never heard, that Hitler ever seriously hided his true intentions, why he wanted to disarm the "man on the street" (except in his and Goebbels propaganda, which You won't count much on, do You?). I'd be really interested, where You have that idea from.

Regards

Robert

just let it allocate to commercial people.

keep quality (well... you can't keep quality by testing CW here) and
lose spectrum. period. (actually not many are interested in sitting
down alone in ham shack anymore so opening bands to public likely will
not change so much)

5025. Help Please. Problem with MFJ-432 Voice Keyer & Vox

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-20 00:00:00 UTC
From: John@datasafe.demon.co.uk
Message-ID: <3562b186.14045407@news.demon.co.uk>
Source record: 143530

Dear MFJ

I have just purchased an MFJ432 Voice Keyer.

I have one problem and one question!

PROBLEM.

I have connected the MFJ-432 to my Icom 775DSP and set the internal jumpers for Icom. I am using a Heil HC4 headset, all works fine except when I switch the rig to use VOX. The rig goes to transmit okay but stays in transmit!!

I have tried to remedy the problem without success. The problem persists even when the unit is off and the power is disconnected from the rear panel connector. I have tried reducing the 'output level control' to its minimum, but this does not sort the problem either!

If I connect my headset directly to the rig, all workd fine.

I would be grateful if you could provide me with a solution.

QUESTION.

Is there anyway of increasing the amount of recording time available - perhaps by adding more memory?

I look forward to hearinf from you.

Regards

John

5028. FS: TM-201A Kenwood $125

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-20 00:00:00 UTC
From: ak2f@qsl.net
Message-ID: <6juio9$6vf$1@nnrp1.dejanews.com>
Source record: 143533

For Sale:

Kenwood TM-201A miniature mobile radio for 143-149 MHz
45 Watt transmit (same amp as "50 watt" rigs)
Hot GaAs FET receiver and doesn't overload like many of the broadband radios
LED display, no bulbs to burn out
Tiny dimensions: 1.5"H x 5.25"W x 8"D
5 memories. 3 work with simple +/- 600 Khz switch, with reverse button.
2 store both tx and rx frequencies for odd offsets. Rig will scan.
Microphone: commercial GE, non touchtone. Supports standard Kenwood 8 pin
mikes.
Must run external speaker....rig is that thin...no room for speaker in case!
Power chord.
Have schematic, but no manual. Simple to operate, none really needed.
Rig was the smallest, hottest RF performer in the 1984/5 timeframe when they
were made. It's in the same family as the TM-241A and TM-261A that everyone
else cloned. Icom equivalent is the IC-27H.

See the rig at: www.qsl.net/ak2f/index.htm

Firm price $125

Yup. Knives, and simply threats, are also highly popular, and
effective.

>No kids ever killed teachers and students with a pick ax.
>

Don't count on it. Here, in Rochester, the weapon of choice to kill
teachers and students is also the knife. Unfortunately, it has proven to
be a highly effective one.

Actually, the National Socialists, though they were far from Second Amendment-type purists, considerably loosened gun restrictions in Germany compared to the previous "Social Democratic" regime. Just compare the 1928 and 1938 laws. (A book has been published which prints the two laws side by side, so they can be easily compared. It's called _Gun Control in Germany, 1928-1945_ and I think Noontide Press in California, among others, has it. It is also for sale at a lot of gun shows.)

Guns were widely owned by private individuals in Germany from 1933-1945, but were required to be turned in to the Communist and other Allied authorities when the occupation governments were set up after the war.

....
> The American system of justice may be one way to go, but

....

I'm not necessarily disagreeing with you re the Swiss and the Americans, but this "democracy" bit is a poor use of the language.

Switzerland and the United States are republics, and have constitutions for a very important reason -- to protect us from the tyranny of the majority; to secure rights that no majority and no legislature can ever take away, no matter how large or passionate the majority is that wants to do so.

Democracy and tyranny are perfectly compatible. It's called mob rule.

Democracy and freedom are mutually exclusive.

I'll take freedom.

Cheers,

Kevin, WB4AIO.

13 June Dennis MA BarnstableARC @ThepSmithRd $5/sp@7

Come to Burtvention 98 in June on the Cape. Meet your favorite Burts.
See the actual computers they use to entertain and amaze you. An
autograph session will be held and a panel discussion will follow. Try
to sell your junk at the flea market and spend your day dickering with rich
old men over 50 cents. Pay 2.00 for hot dogs when you can go down the street
and get 6 for that price.

Helpful ham hint. Buy a 7 buck table- just split it between several
people and save yourself the 5 buck rip-off fee.

>1) There are six jumpers besides the lithium battery. What is their
>exact setting (all jumpers!) for a range extended radio? What is the
>exact procedure, is it just enougth if only "LOCK" and "FAST" are
>pressed while switching the radio on?

Jumper 1 should have a simple diode across it.
Jumper 2 should have solder across it.
Jumper 3 should have solder acrooss it.
Jumpers 4, 5, & 6 must be open.

Then, press the LOCK and FAST buttons together
while turning on the radio and you'll have full
coverage of HF, up to 167 MHz on 2 meters, and
up to 512 MHz on 440.

5054. WTT: Icom IC-T8AHP for an FT-50RD **TRADE**

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-20 00:00:00 UTC
From: chia@news.utk.edu
Message-ID: <6jv787gum1@gaia.ns.utk.edu>
Source record: 143559

I have an Icom IC-T8A high power HT that is only 2 months old. It
has a NiMHi bat. And Wall wart charger. EXCELLENT intermod reject. It
is a GREAT radio and covers 6 meter, 2 meter, and 70cm GREAT with 4.5 watts.
When hooked to 12+VDC it is a little over 5 Watts. It has been extended RX
moddified to include the following freqs.

50-75.999MHz
76-107.999MHz
108-135.999MHz (AM air)
136-229.999MHz
300-399.999MHz
400-599.995MHz
600-999.995MHz

The mod is a simple push button and then power on mod that can be
undone by reseting the radio. I want to trade it for an FT-50RD with the
deluxe keypad built in preferably. The only reason that I want rid of this
GREAT HT is that 6 meter activity here is dead there is no use for it on
FM. All the activity is on SSB and there are no repeaters near me to hit.
If anyone is interested and has the FT-50RD then please E-Mail me at one
of the addresses below. Thanks....

The argument is about the definition of people.
I believe it to be we the people as in every citizen in the United
States os America. Therefore Congress can not pass a law which
infringes on ME as a person covered in the group called people.
So in that context the second amendment bars congress from passing
ant gun law.
How did a debate about guns get into the newsgroup?

This is not a discussion of whether CW testing should be banned. This is about the danger of reallocation of part of the 70cm band, which is very widely used by hams. Please don't make comments where they are not necessary.

5058. Major changes at Hy-Gain

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-20 00:00:00 UTC

Just found out that HyGain made the announcement at Dayton that
they will now be selling antennas and other equipment on a factory
direct sales basis. They have installed a toll free number
(800-898-6723) for factory direct orders. Also, they have a web page
at http://www.hy-gain.com with a listing of all the prodousts and the
factory direct prices.

When I checked the factory direct prices, they appear to be
about 10% LESS than prices thru the HyGain dealers. Examples
of prices are TH-11 at $850.46, TH7DX at $639.35, and 204BA
at $379.53

Rotators, VHF, UHF, and other equipment is also included in
the products that can now be purchased factory direct.

>probably need to look for the keypad reset procedure for my 50.

I don't have the scanner anymore so I can't check. If the pinhole
reset button on your Pro-50 works like the same thing on the Pro-2006,
try this (from another post):

To reset your scanner switch it on then:

1: press and hold "Clear".

2: using a pointed object, press and release the
"Reset" switch. (Use a paper clip)

3: after confirming the display goes blank,
release "Clear".

Memories will be erased as well.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will

be attempted. This does not pertain to new guns alone as if you take in a gun for repair a background check is supposed to be ran on you.

How do you feel about a law that was ruled, at least in part, as un-constitutional being beefed up to suit Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol Hill now that would kill Brady cxompletely should it become law. It needs help now as there are only four signed on to it now.

If you want to help you could contact your people in Washington urging them to sponsor H.R. 2721.

Subject: TS870 MARS/CAP Modification
From: Howard Ryder <W4NTW@ix.netcom.com>

TS870.mod
Here is your chance to prove how adept you are at microsurgery.
This mod will enable the TS-870S to transmit on MARS, CAP and othe
frequencies.

1. REMOVE TOP AND BOTTOM COVERS.
2. REMOVE THE TOP SCREW FROM EACH SIDE OF THE FRONT PANEL
ASSEMBLY.
3. CAREFULLY ROTATE THE FRONT PANEL FORWARD TO GAIN ACCESS TO THE
CONTROL BOARD(X53-3560-11 A/4). THIS BOARD IS MOUNTED VERTICALLY
AGAINST THE BODY OF THE TRANSCEIVER. IT IS NOT THE BOARD THAT
IS MOUNTED IN THE FRONT PANEL ASSEMBLY.
4. LOCATE AND REMOVE RESISTOR R244 FROM THE CONTROL BOARD. R244 is below
IC12 ROM and above IC23. There are two chip resistors, one on
top of the other -carefully remove or break the top one..it is easily
fractured -that's R244.
5. REASSEMBLE AND THEN PERFORM THE CPU RESET BY HOLDING THE A=B
BUTTON DEPRESSED AS POWER IS TURNED ON.

IT WORKS!!

Jim,

There were literally thousands of 800Mhz radios at Dayton this year. MTX800 and 810s at $50-75 each, MTS2000 B7s for $300, maxtracs for $50, B3 MTX8000s for $50. Nextel has done a wonderful job of making Privacy Plus and most other Motorola 800 radios worthless. Even Spectras for $150. I bought several as I operate a conventional 800 system. You should be able to find them, although the Smartnet versions are the only ones that have any value left to them. Unfortunately, most governmental agencies don't buy used so even the Smartnet and Astro stuff was not to high. There are a few who still think MTX 800s are worth three hundred, but just keep looking and advertising, they are becoming a "dime a dozen".

Tom

The next great bargain to come, at least for hams, those pesky 25Khz radios about to become obsolete!!!

5070. 70cm Allocation In Danger

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-20 00:00:00 UTC
From: treynolds@email.exide.com
Message-ID: <6jt7ujacg1@nnrp1.dejanews.com>
Source record: 143660
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.policy

The following was from the latest issue of Space News. It seems to be of interest to all hams:

The Land Mobile Communications Council has issued a demand to the FCC that it immediately reallocate of most of the 70 centimeter Amateur band over to private mobile operations with private land mobile designated as the primary user.

Technically the document is nothing more than a formal rule making request to the FCC that has been designated RM 9267. In reality it is more a demand by the LMCC for the FCC to immediately reallocate 420 to 430 MHz and 440 to 450 MHz away from the federal government and over to the Private Mobile Radio Service on a primary basis. The Land Mobile Communications Council is also asking for new allocations at 1390 to 1400 MHz, 1427-1432 MHz, and 1670 to 1675 MHz. It is also demanding a walloping 85 MHz at 960 to 1215 MHz and it wants all of this turned over to the Private Mobile Radio Service no later than 2010.

But LMCC is not willing to wait until 2010 to take over the 70 centimeter band even though this is the second most popular of the Amateur radio services' VHF and UHF allocations. Amateur Radio is a secondary user of 420 to 450 MHz. There are thousands of FM repeaters operating from 440 to 450 MHz and a variety of modes on the air every day in the 420 to 430 MHz segment. While the Land Mobile Communications Council petition indicates that it is willing to permit Amateur Radio to retain some sort of secondary status, this would be only on a non-interfereing basis with the new commercial interests.

Experts say that the best way to kill RM 9267 is though a massive letter writing campaign to the FCC. A campaign that outlines the specific use of the band by Amateur Radio Interests -- informational filings that detail how every hertz of 420 to 430 and 440 to 450 MHz is utilized on a day to day basis by hams.

The commentary cutoff date on RM 9267 is June 1st. This leaves precious little time for radio amateurs around the nation to react. Those responding must be certain to reference RM 9267 at the top of their letter. Send comments to the Secretary, Federal Communications Commission, Washington DC, 20554.

This sounds EXACTLY like what happened to a Pro-43 I had at work. It
was loaned out working and returned in the condition you documented.
I was ready to take it back to Radio Shack (who had already quoted a
flat $100 on the repair) when someone suggest a RESET procedure that
was not documented in the manual.

It worked! The scanner was restored to full functionality. I don't
recall whathat Pro-43 procedure was (something like press 2, 4, & 9

keys while turning the scanner on) and I don't know if there is a Pro-50 reset procedure like that, but it would be worth asking about or researching!

Steve

I couldn't find the reset procedure for the Pro-50, but here is a
testimonial (and the fix that worked for me) for the Pro-43:

E. Scott Sykes wrote:
> Scott Richardson wrote:

To quote Homer Simpson: "WOOOOOO HOOOOOOOOOOOOOOO!!!!!"

I can't believe it! Here I was all ready to send this thing back
to Radio Shack repair (and lose cellular coverage) when all I
had to do was hold down a couple of buttons and turn it on!

I love you, man! And I don't even want your beer!!

All,

I have a Drake TR-22C 2-meter transceiver. I'd like to buy crystals for
it, but where is a good place to find crystals and what formulae do I need
to calculate what crystals I need to have in the receive and transmit
slots? Thanks for any help in advance.
Chuck, looking to get my TR-22C online

I have a few 100uf 2.2kv defib caps. Won't work for shrinkin quarters,
but great for filter caps. Each is a little larger than a coke can,
and weighs about as much. 2 in series should work well. Make me an
offer.

For Sale -- Timewave DSP-59+ in excellent, like new condition. Works great! Kills hetrodynes and adjacent frequency QRM in SSB mode. Provides steep-skirted, narrow filtering in CW mode. Reduces "random" noise in all modes.

All cables, manual, box included.

Sell for $180 shipped and insured.

5081. FT847 Review, Jumpers, Power Amp. Connection

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-20 00:00:00 UTC
From: Guenter Koellner <guenter.koellner@oen.siemens.de>
Message-ID: <35627164.3739DB5D@oen.siemens.de>
Source record: 143671

Hello,

I now have my FT847 here. Its a splendid rig and performs very well. There are a few things that could be better or other way, but thats personal opinion and not common sense.

The noise reduction works fine, its selectable with 15 levels, up to level 7-9 it is usable in SSB, too. There is a selectable bandwidth CW filter from the DSP in it, its width is selectable 25?, 50, 100, 200, and 400Hz. I don't know on which level it works, I guess on the audio. I want to try the radio on EME as soon as possible and verify it to my previous IC475 and an AOR3000 scanner.

My both VHF and UHF ports are equipped with UHF-Connectors, but its very very easy to change them to N style. Its more difficult to change the RF connectors to N, but there it is not urgent.

Up to now I only miss either a separate display of the RIT offset, it just adds to the main display. So it is always a little much work to determine the offset itself, for example, when I work EME or listen to satellite beacons, then I know there is an doppler of 700Hz or 5kHz, and I directly want to set this. In this case, I also very much miss a RIT clear button, or did I just not find it? A XIT would have been nice, too... I currently think I can help myself by just using both VFOs, since both alternatly tuneable with all functions.

I also think that even the "fast" setting of the VFO is still too slow. I now use the channel tuning which is selectable for 1kHz in SSB for searching the band and then take the main VFO for aligning the right frequency.

I tried to do SSTV using the 3pin-stereo-jacket at the back, but the audio there was too low to drive my simple opamp zero-crossing-detection modem. Using the external loudspeaker output at the back then brought success.

By the way, as far as I can interprete the handbook, there is no power limit for continous wave transmissions, like FM, SSTV, RTTY. It seems that full 100W power is available for that modes, too.

Unimportant facts that I miss are a simple roger beep, which would surely have been easy to implement and a transmit power delay for preamp safety switching.

I very very much miss a feature, that would have caused much influence on the radio: the possiblity of a second, independant, receiver... I know it would have caused much efforts, but nevertheless, it would have

been worth it. Even my simple C568 provides that feature, of course, there it's easier when only handling simple FM.

I don't agree to the noisy fans and the high audio output statements that were published here.

Now, my questions:

1) There are six jumpers besides the lithium battery. What is their exact setting (all jumpers!) for a range extended radio? What is the exact procedure, is it just enougth if only "LOCK" and "FAST" are pressed while switching the radio on?

2) Can somebody tell me the exact meaning of the "Standby" pins of the pa control connection. When are these active, on which level, what are they capable to drive?

3) When operating on CW, pressing the CW button again would make the "LSB" mode sign also on. What does that mean?

To all ,

This is a list of technical things,for which, I am looking for either,
parts, information,or manuals and circuits.It would be most apreciated
if anyone could help me ,and many thanks for help received so far.

1/ circuit for A.W.A. distortion and noise meter type
A51932 serial No- 517.

2/ Siemens Halske three contact connector Type 9 Rel kli 6a.

:-Got a lot of duckshoving,got onto someone(BOB),gave me this no_
"9721 2888 and would try to find out the source of the plugs.
He rang back but said the parts did not exist as the equipment
was so old.
-He also said to try customer service on 9420 7325.

Today Mon 25 Aug ,got relpy from tony ?? (from Siemens)
said that the plugs could not be found in any of their storages

3/ Circuit diagram's for :-
Siemens PEGELSENDER 200Hz - 620KHz
LEVEL OSCILLATOR W2055

Siemans PEGELMESSER 200Hz - 620KHz
LEVEL METER D2055
4/ G.E.C. 1300M Cathode ray tube for B.W.D. 521 series of cro.
Also any parts or another BWD521 or 521R and any
manuals would be very mutch apreciated as I'm
restoring one.
5/ See if there is an Australian sorce of info on
AG440 Record/play amplifiers.
AG440 2 track 1/4" tape heads

6/ Enquire about 2track 1/4" tape heads (record and play)for Rola 77MK3
Tape recorder.
7/ C.E.I. 310 camera manual

8/ 10-GHz gunplexer.
Microwave Associates

Microwave Asociates Gunplexer
Model MA87141-3
35 to 40 mW output version.

9/ Sony TV cameras:-
Circuit diagrams/manuals for,
Sony Video camera model HVC 3000 P. Trinicon camera.

Sony Video camera model DXC 1200 P. Trinicon camera.

Sony Video camera model AVC-3250CE and AVC-3200CE vidicon.

JVC Video camera model:- GS-4600E.

10/ Video recorders:- manuals/circuits for,
Sony SL-F1E portable Beta vcr.

Sony SLC-6AS front loading Beta vcr.

Sanyo VTC9300 Beta vcr.

National NV9210 UMATIC vcr.

Hitachi portable UMATIC vcr,Model:- SV-340.
Hitachi ac power adaptor model AP-34.

11/ Circuit for:-
a/ Realistic AM stereo tuner model,
TM-152 AM AM stereo tuner.
b/ Realistic AM FM stereo tuner model,
TM800 AM FM stereo tuner.
12/ Circuits/manuals for Hewlett Packard ,X-Y recorders models:-
7045A
and
7046A.

13/ Circuit for:-
Vintern BTR8 low band 50watt valve base station unit.

14/ Circuit for:-
Marconi TF934, FM modulation monitor(deviation meter).

15/ Manual for:- Siemans, LEVEL OSCILLATOR .3 to 1200 K/CS,REL 3 W 29.

16/ Manual for:- a/ Hewlett Packard,SHF signal generator model 618C.
b/ Hewlett Packard,SHF signal generator model 620B.
c/ Hewlett Packard 50Khz to 65Mhz model 606A.

17/ Manual for:- Cushman Electronics model CE24,selective level meter.

18/ See if you can find out about the following software:-

ok DONE A/ SSTV software to view all sstv standards
on computer,preferably one for CGA,EGA,VGA.

ok DONE B/ Any setup software for IBM PS2 model 80.

C/ setup program disk for NEC APCIV advanced PC.

D/ Find XTREEINS.EXE and XTREEINS.DAT files to
see if they help install XTG properly on other
drives.
E/ Find out about XTreeNet Software,how to get it.

19/ Circuit or manual for:-

Systron donner frequency counter,
MODEL 6052.
Also "NIXI-TUBES",for above unit.

20/ Circuit or workshop manuals for:-
YAESU. A/ Yaesu FRG-7 communications receiver.
B/ Yaesu FT-101B.

21/ Icom:- Internal battery charger module (option) for ICOM IC-215
portable Two metre tranceiver.

22/ Info about Diablo 630 printer,does anyone know,circuits/manuals.

23/ Tunable sound Demodulator & Audio output for satterlite T.V.receivers.
By David Pack VK2GIO.
P.C.B. type:- AATC0001 mk1,from R.C.S.radio.

24/ I.V.C. 1" video recorder circuit manual for :-
I.V.C.video tape recorder model,****.

25/ TS711-A optional computer interface module,how mutch? can it be obtained?.

26/ Circuit diagram or manual for :-
RODE & SCHWARZ - STEREOMESSDECODER-STANDARD STEREO DECODER,
Model:-MSDC.BN4193.

27/ High voltage cable type:-

E64787 RJ
A.M.W. style,3257
250C, 25KVDC.

Note:- I think the "250C",part of the spec,refers to temperature
ratings of the cable,particularly as we saw it in a gas
cooking device dispite the builders obvious lack of
knoledge on high voltage wiring!.

28/ Electronics Australia October1984 AM stereo decoder project circuit.

29/ From DSE :-
A/ DSE Commander, cat,6308,2Meter tranciever, circuit diagram,
also its from EA,January 1984.

B/ DSE Explorer,UHF Tranceiver,cat.6300,and,6302.
also EA about 1984, or 1985.

31/ RANK NEC HPA 4619 Stereo modulator pn 172 48 1614.

This unit uses Sohsin filters,
These are:- 53KHz low pass
Soshin HZI-009401-002
53 KHz LPF
8302011

:- 15KHz low pass
Soshin HZI-009401-001

15 KHZ LPF

32/ Setup disks for IBM PS2 Model 80 and model 55

33/ 600-600 Ohm +20 Dbm 30Hz to 20Khz audio transformers:-
Manufacturer :- Dyne Indudtrys.
Part nunber :- Type 8022.
Telecom app No_ :- RA 77/119.

34/ Radio broadcast UHF/microwave STL Equipment.circuit diagrams needed.

a/ TFT Transmitter model 8300, 900Mhz band.
b/ Electronica Aural STL Receiver Model RX RL-NV. 900Mhz band.

35/ Sony video monitor model CVM1810E circuit diagram reqired.

36/ Poul Kirk Electronics 16 chanel audio mixer.Info and circuits needed.
This unit consists of:-
16 input chanels model, IM-04.
6 output/peak limiter unit,model, GOM-04.
1 talkback/house momitor/test osc,unit,model, TBM-04.
find out about the Duncan faders it uses,price and availability.

37/ Other items of interest:-
Yamaha pa amp model,P2201 100W/chan
DBX 163X limiter/compressor.
38/ circuit for :-
Video monitor
RAMTEK graphic display monitor
model,GM859C s/n 05G375 ,assy 05949.
RAMTEC CORP,SANTA CLARA, CALIFORNIA.
Also the lable on the chassis reads:-
IKIGAMI COLOUR MONITOR
model DM511H REV.
IKIGARMI TSUSHINKI CO LTD,TOKYO,JAPAN.
June 1980.

39/ A circuit or manual for:-
TRANSITRON Model SG-132 ,sweeper generator,
this unit covers 15Mhz to 400Mhz.
It features a built in CRO.
made in Manchester,N.H.

40/ Manuals for Phillips FM-828, and Phillips FM-900,
also, software for the E prom in the FM-900.

41/ Circuit or manual for:-
Sony model,DXF-2ACE, electronic viewfinder.

42/ Circuit or manual for:-
Philips marker sweeper generator model,GM 28775.

43/ Circuit or manual for:-
AWA,VHF/UHF FM radio test set A412.

44/ Circuit or manual for:-
Advance af generator model, J 2 C.

45/ Circuit or manual for:-
ASTOR pulse & bar generator,model, P B 1.

46/ Circuit or manual for:-
UREI dual peak limiter model 1178.

47/ Does anyone know where to get some socond hand 600 ohm line XFMR's,
of the following types?
a/ Arlec LT 347 600-600 ohm A&R Electronics.
b/ L.M.Ericsson-Trimax Broadcast types such as
MS1693 ,MS866,etc.

48/ I am trying to restor an old AN/TRC-24 military radio setup and I'm
interested in obtaining any of the following:-
a/ circuits or manuals.
b/ power supply PP-685/TRC.
c/ Radio receiver R-417/TRC.
d/ Radio transmitter T-302/TRC.
e/ Transformer TF-167/TRC.
f/ Transmitter B band tuner AM-912/TRC.
g/ Transmitter C band tuner AM-915/TRC.
h/ Transmitter A band tuner
i/ Amplifier-converter AM-914/TRC
j/ Amplifier-converter AM-913/TRC
k/ Radio frequency amplifier AM-912/TRC
l/ RF amplifier-multiplier AM-915/trc

So this is a list of some of the radio set I would be most interested
in any of the parts antennas or anything to do with radio set
AN/TRC-24 or its accesories.

49/ Still on the subject of vintage millitary radio equipment,does anyone
know about the following equipment,circuits or parts there of.
a/ MARCONI SHF transmitter type B.D.415, 4.55 to 4.85 Ghz
and accompanying receiver.

b/ Mullard(I think) Type B70 transmitter/receiver,also
of 1950's 1960's Vietnam war vintage.

If anyone can help it would be most appreciated.

50/ Circuit for Equatorial model C-200 . PN 99-0025-08 A,microwave link
and its asociated parts.It comes from Equatorial, Mountain view
Ca 94043 U.S.A. It was made in 1989.

Thanks in advance Nigel .

5085. need expanded RX mod for Yaesu FT-690 MkII

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-21 00:00:00 UTC
From: Peter Shintani <shintani@funtv.com>
Message-ID: <3563A8D5.592397D6@funtv.com>
Source record: 143446

Hi:
I would like to know if the RX range can be expanded on a Yaesu FT-690 mkII. It only covers 50~54 MHz. I would like to know if it can be made to receive down to the 49 MHz band so I can listen to my baby monitors.
Peter

5086. Off freq IC-W21at

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-21 00:00:00 UTC
From: Steve <n8nyu@provide.net>
Message-ID: <35639EBB.8D8DE254@provide.net>
Source record: 143447

Anyone have experience with an Icom IC-W21at 2/440 ht?
I bought it used at Dayton and see that the 440 side is a bit off freq.
(5-8khz low) sounds a little muffled.
Having no experience I still am willing to tweak a pot if there is such
a thing. I do have the schematics for it and have a freq counter. Anyone
steer me in the right direction rather than sending it in to a service
depeatment?

Jeffery:
I have a TH-235A. I think it's a great radio. I use it as an HT, a mobile rig (w/DC cable and a mag mount ant.), and as my 2 meter base with a J pole 35' up... It works well in all three configurations. You might consider getting the "HP" version as it includes the 12 volt battery, (as opposed to the 7.6), and a "cradle" charger, (as opposed to a wall pack). With the 12v

battery you can get 5 watts out on the high power setting, (only 1.5 with the 7.6).
I also picked up an SMC-34 speaker/mic for about $35.00 - a very worthwhile investment - it really is easier to use while mobile.
I'm always getting good signal reports from other folks - even on low power.

When I compare the cost of this rig to some of the used gear at swap meets, I really think it's worth the small delta for the features and the warranty...
Well, that's my 2 cents.. Have fun with whatever you get,
kk

From: Mycom@xtra.co.nz
Message-ID: <6k0rgn$f7q$1@nnrp1.dejanews.com>
Source record: 143457

very interested in reading the comments on the out of band tx mods for the FT847 could someone help me with the following questions:
1) what is the exact out of band tx coverage eg I know it covers the whole of HF but what about 30-76mhz, 118-174 and 420-512mhz once it is modified does it tx on 70mhz like the Euorpean model??
2) are these mods a official Yaesu mod??
3) can someone tell me how the radio rx performs out of band eg 30-50mhz, 54-76mhz, 118-174mhz etc etc
I have a FT847 on order will have it in about a week am interested in any info

Source record: 143461
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

While traveling Im looking for a multi band portable antenna.

Often its hard to get an inn keeper to let me string up 100 feet of wire.

How well does the Perth Outreach with the tripod perform when compared to
a wire dipole? I would like to work 17m, 20m, 40, & 80m.
Can a 12 foot antenna like this really work 80m effectivly?

What antenna have you compared it to (if any)?

Is the tripod easy to set up?

Do you find the price justified by the performance etc.?

Thanks

If your experience doesn't include reading schematics then don't try.
If it does, then hook the radio to a dummy load and ey up, or if no dummy load
is available you can probably get away with putting the radio on e-low.
Be sure to use a center frequency (i.e. 146.000 and 445.000) for tuning. There'll
be a tuning slug (coil or cap.) close to the main crystal. That'll most likely be
the one to use. Make your adjustments very carefully and slowly.

Good luck!

Source record: 143468

Greetings all-
Well, I tried that mod 3 weeks ago, and it did not work.
Possibly, Units shipped to the USA are strapped differently.
On mine, 5 and 6 are strapped. So..what is the combination that will work?
1,2,3 ONLY?...or 1,2,3,5,6?

Please tell us...exactly which pads have straps across them.

Lets get this straight...cuz the pads are flimsy and won't hold up to
repeated soldering and unsoldering.

Thanks!
Bob

I have two available:

1. Radio, antenna, battery (CM-8), and wall charger.

2. Radio, antenna, battery (CM-8), and VOX headset. (you would need to go to Radio Shack and get a wall charger).

Both the radios are in VG condition and the batteries are in good condition.

Both are set for field programming. I have copies of the programming instructions with each radio.

I am asking $250 ea. incl. CONUS shipping.

Kustom MR-7 X band radar unit. Good condition. Does stationary and
moving
car detection. Haas 1 large antenna/window mount for inside or outside
detecting. Dash unit has one or two small cracks in the leather case
and one segment of 1 eight segment speed digit does not work. However,
it is obvious what the speed is. Comes with Tuning fork.

$150 + COD from Boston or can arrange pickup

5118. FT-8500 cross-talk

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-21 00:00:00 UTC
From: tom.soulsby@winning.com
Message-ID: <6k1k2o$f6s$1@nnrp1.dejanews.com>
Source record: 143479

I recently acquired a new FT-8500 and really like it. There is however one issue with the rig. *Sometimes* while transmitting on 2M, I get *feedback* from the 70CM side of the unit. I would expect the designer of a dual-band rig to consider an issue such as this unacceptable. Am I wrong in this regard?

Your comments are appreciated.

73's,
Tom, WA4TS

I have the following books (all in excellent to new condition) available:

Practical Electronics Troubleshooting by Perozzo
Good information on troubleshooting all sorts of electrical
and electronic devices $ 15

Understanding Data Communications by Friend
The title says it all! $ 15

Understanding Communications Systems by Cannon
This one covers all sorts of communication systems -- not
just the data communications like the one above. $ 15

An Introduction to Fiber Optics by Shotwell
Not in great depth, but an easy to understand book $ 15

Introduction to Electronics and Electronic Shop Practices
by Worden - Mainly a "Shop Techniques" book, with lots
of reference charts, etc., but some theory included $ 18

Digital Electronics by Uffenbeck - Technician Level text
Covers from number systems to shift registers to Programmable
devices to interfacing $ 25

Electricity - Principles and Applications by Fowler
Part of McGraw Hill's "Basic Skills in Electricity and Electronics"
group of texts. Mainly theory, in easy to understand
explanations. $ 20

Electrical Measurements by Smith & Wiedenbeck
Classical measurements book - Engineer level $ 15

Principles of Electronic Communications by Mandl
Includes modulation, amplifiers, noise, transmission lines,
antennas, etc. $ 18

I also have

Exploring Handbook - 1958 - close to new condition $ 20

Handbook for Patrol Leaders - 1950 copyright - 1959 printing $ 18

1986 American Red Cross "Expect the Unexpected" $ 2

If you would like more information about any book, please e-mail to
W8EK@usa.net. All books are in good shape.

Prices do not include shipping from NE Ohio.

5120. Re: The truth about gun owners

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-21 00:00:00 UTC
From: Kreblon@ccwf.cc.utexas.edu
Message-ID: <6k1hlm$26b$3@geraldo.cc.utexas.edu>
Source record: 143481
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.ra

Not another responce...but Yes!

The median demographic for ham operators is the following..
Middle aged white with above average income.
(read: $500,000+ net worth and three vehicles)
And what is that group's average belief system?
Republican, christian right wing, and paranoya theory reactionary.
Just listen to 3853..or now even 20 meters.
Why? The white power base in this country is loosing power.
The country is becoming browner. Get used to it.
And the gun ownership issue is just an outgrowth of the basic
fear and insecurity of people who are having their unchallenged
supremacy threatened. All the bravado is inspired by fear. All
the "loss of freedom" paranoya is fear talking. When you cannot
adapt to the new reality, you scream and yell and act as if
you are not scared. The truth is- you are.
Remember that nothing will protect you from a tidal wave of south
americans immigrating. You will know 30 words of spanish.

How about taking responcibility for the fact that- if your life
seems to stink- it is YOU that is to blame. It is not some guy and
his wife in D.C. of whom you have no direct knowledge. Of whom you
have been spoon-fed information by people with an adgenda. Unless
you indeed have ESP, your opinion is the direct result of a multi-
million dollar (and now tax dollar) campaign by the sore loosers.
(what a simple and overlooked concept! Huh!)
It wouldn't take 50 million to indite anyone reading this.
And if the whigs were "getting any", they would forget all about
those who were- and do the job they were sent to do. -I don't
know any attractive women who like crusty -teeth grinding paranoids
with bad attitudes. Go ahead, take a picture of your right hand
and put it in your wallet.

So...get your self tharapy flames fired up...but remember that
true personal power comes from within...you can't buy it in a gun
store, and you can't get it from a bible beater. Your investments
will pay out, and your padded ass will wither on a feather pillow.
So Shut Up.

Bob

PS: Repeat this tharapy mantra: Hillery is richer than me, better looking
than me, and smarter than me - and it doesn't bother me a bit.

> Can a 12 foot antenna like this really work 80m effectivly?

Hi Tom, if 12ft is all the space you have, you might call this antenna effective. What space do you have? Whatever that figure is, use all of it. An antenna that will beat the socks off a 12ft antenna on 80m is the 20ft St. Louis Vertical (the modified version, not the original). You can find information on it with a web search. Of course, you will need a high-Q loading coil and some sort of ground plane/counterpoise system. The St. Louis Vertical is based on a telescoping fishing pole, 3 ft collapsed and 20 ft extended.

I've had the same problem on an FT-8100R. But it's intermittent, and
there doesn't seem to be a real pattern to it. It was my understanding
that the secondary frequency (ie; the non-transmitting frequency) was
always fully muted when the transmitter is active. This is apparently
not the case.

I have contacted Yaesu customer service about this via email, but have
not yet received a reply. When I do, I'll post it to the group.

Good advice, Cecil. Did not know you were a qrp'er!

Had that antenna but broke the pole (using it for unrecommended purposes). Must build a new one soon.

But I am a bit soured on verticals; G5RV seems to outperform all I've tried -- and there are btter horizontal antennas than the G5RV (e.g., yours).

Bill
I had one of those last year. The only one I had ever seen in
25+ years of buying repairing and selling communication gear.
I'ts not that difficult a unit to work on-all tubes and descrete
components. The only item that could be a problem is the multi
section capacitor -no longer available because of the higher
voltages used in those days.
What's the problem??
I have the operators/service manual.
Mike
Le Claire, Ia
Where are you? Possibly a tech oriented ham in youre area can fix it

There is no "jury out" on RF exposure, becasue no one can agree on the
safe limit. The only definitive study I have seen is by Dr. Quirino
Balzano of Motorola who concluded that 7 watts ERP at 800 MHz should be
considered the limit for any direct exposure. Motorola claims that,
above this power level (at 800 MHz), only a roof mouint antenna or
properly installed on-glass antenna (radiator above the roof line)
should be used.

If portables were unsafe inside the vehicle, they would be unsafe
outside the vehicle. A "metal shell" of a car is not a parabolic
reflector that would concentrate the energy on your skull - the
distances involved and the passive reflection pose a far less "threat"
(if there is one) than the direct exposure from the antenna a few inches
away from your head.

Any discussion of RF hazards should be left to those in a position to
collect and analyze real data - not just hypotheses. The real answer is
above - why subject your listeneres to a crappy signal when there is an

alternative - use a magnet mount antenna.

Source record: 143500

Have a busy lifestyle? Need to make a schedule and can't be home
to make it? Out with the family and don't want to miss the swap net?
Need to work that DXpedition before they go QRT and your working late at
the office?

Well don't miss a single QSO with the use of AEA's HamLink! This is a
commercially manufactured product by the now defunked AEA Corporation.

HamLink allows you to fully operate and control your home HF station,
including antenna rotors and amplifiers, from any telephone in the
world! Even operate your HF station from a cellular telephone when stuck
in rush hour traffic.

All modes, SSB, FM and even CW! With the use of the OpLink remote, you
can even operate CW up to speeds of 40 WPM from any telephone!

Just plug in the HamLink controller into any telephone line, the radio's
mic, spk, cw key jacks, and the radio's computer data port (for freq and
mode control, supports ICOM/Kenwood/Yaesu), and away you go.

This is a GREAT solution for individuals who live with CCR restrictions
and can't put up antennas. These individuals can create a ham club at
another location, then dial into the remote from their home and work the
rare ones!

If your interested, make me a reasonable offer on the following complete
package:

I have $100 into the AEA HL-80 HamLink telephone remote, plus $15 into
the ver 5.0 firmware upgrade, $75 into the AEA OpLink remote user
interface, $22 into the build in TiCK CW keyer, and $39 into the add-on
DTMF key pad. The unit comes with all user and programmer manuals.

As you can see I have a total investment of $251 into this setup. So
make me a fair reasonable offer for the above total package and its
yours. I will not break the package up.

Payment will be a cashiers check to me sent to my callbook address.
Include shipping cost within your price quote.

NE7X...

Um... what makes the user manual that they include with the thing less than
proper? It documents the features just fine. The one I have even came with
complete schematics.

Now, there's a maintenance/shop manual that I think they might not have for
sale yet, but that's hardly a "proper" user manual, is it?

And I'll have to pitch my opinion in with KC0DBY's: the radio itself is quite
good. I think it's a little weak on audio output for my tastes, but the radio
is reliable, even though I use it in wilderness search and rescue operations,
where ruggedness is at a premium.

Okay spelling checker didn't work!!

I admit I'm sent this message off without reading over it.

Let have a second go:

I have compared this radio to the IC-706. I think I like the 570d
more. Simply because it doesn't have as many functions that are
stored away in hard to "reach" menus. If there is anyobdy who owns
this radio that has any praise or complaints about it could they
pelase send an e-mail back to me. That would be great. I need some
advise becuase this radio will be for a friend.

Thanks'

I tried the frequency mod for the FT920, I changed the F33-Destina
to outside table through menus from USA. Then checked if I could now
transmit.
I couldn't transmit in band or out of band, then I ran the program
Att0274 gen-tbl.txt and got a error message Not Factory Mode!.
It was supposed to say frequency expanded complete.
Anyone know why or have any ideas what went wrong. I followed the
directions
exactly as stated. Its a serial number 7K from April 1998.

RE 1st impressions; SGC 2020

Got mine (2020) yesterday.....
Only had an hour to play last night ... I'll try to get voltage/current fiqs for tomorrow or the next.

Turned on (13.8 power supply and ant is Gap Titan) and got a loud pop from speaker as voltage surge. Then you get the SGC in code/letters, voltage of supply, serial number (forgot order). Then up pops freq display.

First contact SSB with VE on ten watts (from NY) and a 57 report... audio report as nice / sharp.
Played around with filter , works good from 2.7khz down to 1k... sounds ok.

Second contact on CW with N9 at 10 watts agn.... report 559 and then band drops and lost it. Front end seems a little open, filters work some-what but not great.... closing down filter below 400hz is a waste as the signals get trashed by those outside actually wiping out sig.

So for now...
SSB works great, two dx contacts on 10w, good reports on audio. Tried with a Kenwd mike and a Heil 5 with not much diff on other end as to stock mike.
Rx also good on SSB.

CW is a so-so,... filters tend to ring when closed down tight , the relay for on/off during cw is loud and clacky, and if filters are open , a little to much gets in front end.
RX is almost as good as my Knwd 850.

Noise blanker seemed to make no difference.
Meter is fair to bad... rx seems to be lower then normal reading, tx meter jumps wildly but shows ok with output on CW, SWR reflected supposed to show but not to much luck on known swr.
Speaker is alittle weak... sounds stratchy, audio was much better from walkman phones or external speaker.

I like the voltage readout and other features worked fine.

Looks like a good SSB rig and a , fair/poor CW... ok for now and then...
(I like the CW from my Oak Hill Sprint better!)

More to follow,
Tom aa2vk

Source record: 143518

Got mine today and used it on 20 meters ssb worked, Spain, Germany
and Portugal in 15 minutes with excellent audio reports.

CW was nice, worked a bunch of stateside on 40 and 20 meters. My
impressions of the audio quality are different than the previous post.
CW seems to work fine for what the radio is. Did not have the
overload agc problems I experienced with the INDEX Labs ++.
In fact the SCAF filter seems to work fine and audio quality is very
good. Worked several adjacent signals off 40 meter beam without
much pumping of AGC and radio just chuggs along. It does fine
on CW. Granted a CW filter would be nice but I rate it just fine
as a nice portable low current radio. Noise blanker made for impulse
ignition noise and so have no comparision as to how it will work
on that. It did not reduce AC line noise that is near my house(my
IC 765 noise blanker did not reduce the line noise either) so
I will have to wait and go mobile with the rig.

My first impressions are it is a great all around utility radio. simple
to use and effective. DEFINATELY A GREAT buy at $595.

Hams support the Oregon shooting? Funny, I'm a ham, and a gun owner, but I don't recall showing support for it. Matter of fact, I think it's disgusting. To broadly label such thing against a GROUP is pretty hard to do and be able to back it up with facts.

My weapons are kept where I can get to them, but then I don't have kids to worry about. IN MOST CASES, parents ARE (SHOULD BE) responsible for the actions of their children. But, in this case if he killed them too, then you can't hold the parents other than for that which they may have failed to do PRIOR TO their own demise. Like the day before, when he took the gun to school and was thrown out, but hey, they may have been dead already too, at that time.

It is PEOPLE who kill, NOT THE GUNS. Just like when a drunk takes a car and kills. It isn't the car. Cars, guns, knives, baseball bats, bricks, pipes, etc. Any weapon of choice, does NOT have a mind nor a consciounce to make the choice.

But it is WRONG to say OPENLY that a GROUP supports such a thing. You are speaking for me as well by that statement, and I sir, NEVER support such a dastardly deed. Let me speak for myself, PLEASE.

Hi , I'm looking to Buy either a Homebrew or commercially made Two Meter (144 MHz) and or a (440 MHz) Tube Amplifier. It must be able to amplify an FM Signal and of course have a built in or external power supply. The Power Rating would have to be in the 500 Watt Class. Designed to run off a 120 volt AC Line. I don't want any junk ! I want a good solid reliable amplifier. I will be using it with a Kenwood 144/440 MHz.FM Mobile Radio, so the drive requirements would have to match the exciterï¿½.144 MHz. 5 Watts, 10 Watts or 50 Wattsï¿½.440 MHz.. 5 Watts, 10 Watts or 35 Wattsï¿½.I intend on using it for long distance simplex operationï¿½..

Thank You
Very Much,

Carl Domanico N2MFW

DUI...hmmm.... sounds to me as if we should ban alcohol. No alcohol, no drunks, no drunk drivers, no DUI deaths. Yes, ban alcohol.

Oh, wait. Wasn't that tried earlier this century? Anyone remember the outcome?

Dear Tracy and Miguel,Actually I did respond to both your request and sent you a follow up email including the tracking numbers.The main reason why we have been experiencing these problems is due to growth pains, we are not cut out for high volume sales so we have recently developed a distributor list to carry and sell our products so we can concentrate on what we do best, engineer and manufacture. Also, at this time we have ironed out all the problems associated with back orders on parts.

It is with deep regret that we have to air out our dirty laundry on special interest groups (SIGs) but the best we can do is rectify the problem and move on.

Sorry, we were two days late getting back to work from the trade show because of a death in the family.

Sincerely,

Joe Agrelo

Thanks for replies to my ht being off freq on the 440 side. You
convinced me that I probably will ruin the radio being inexperienced as
I am, and without the expertise it would probably be a waste of time as
the root of the problem may involve almost micro surgery.
Since I can set the 440 offset to whatever I want, whats the harm in
programing the radio to transmit and receive 5khz off?
(it is 5khz low)

Miguel,
I think we are going to send a written request to the Credit card company asking that
Agrelo be back charged. Then I will probably call Doppler Systems (www.dopsys.com) in Az. They make industrial and military type doppler DDF's. They may not have all the fancy features as the Agrelo (of course, it does not matter how many features it has if you cant get it!), and it does cost more, but I am sure that it is a reputable company.

BTW, he saw my posting and wrote me an email. I responded quickly to it, but I have had no response back. I guess he ignores emails also.

Good luck,
Tracy

5194. Re: Yeasu 101EE Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-22 00:00:00 UTC
From: tony <tony.dercole@lmco.com>
Message-ID: <35659129.56C53189@lmco.com>
Source record: 143333

The mod to allow the FT101 to transmit on 11 meters was to cut a wire. Everyone referred to it as the brown wire. It had nothing to do with the 1o meter band. After the mod the radio would work on all of the bands.

Chris wrote:

> Raymond Rolison wrote:

Hey! such a broad statement is invariably incorrect. Nothing and nobody
is 100% bad, or FRAUDULENT.

I've used CorelDRAW for over 6 years and have no complaints. It is a
great drawing program. I've used it to make everything from brochures to
letterhead & stationary, adverts, invitations, etc....

Looks like all of your complaints are for the Word Processor. Why not
limit your comments to the subject you are complaining about, or show
proof that ALL their products are junk.

Mark N6WBC

BY THE WAY, HOW DOES THIS RELATE TO HAM ANTENNAS AND EQUIPMENT??????

The kid killed his parents and then stole a rifle from them to kill
the students.

I just heard that he had a history of killing animals ... if so, why
was he still in school in the first place?

Trying to re-assemble a Hi Gain vertical, all band. Need factory sheet with dimensions and all that stuff to get this going. Only info I have is the Id decal for the coils and these are not too easily read either. Antenna from the early 1960 era. no model number that I can find. sure can use some aid.

Burt has no guts to post his drivel on an appropriate news group
where he knows that he will be torn to shreds. There are plenty of
hams over at TPG for him to vent on. It is he that is the wimp and
without guts. I invited him over the last time he posted his rant and
I see that he hasn't had the balls to show up.

I'm a ham in Oregon. I DIDN'T APPROVE OF ANYTHING to do with shooting anyone. Thank you Butt Fisher for your kind, accurate portraying of how we here in Oregon feel about this tragedy. It's so nice to know you are interested and well versed in how we think. You know, there could easily be someone on one of these list that did know a person or the family of a person injured or killed by that kid in Springfield. But then, you are only doing your part to clean up the world, aren't you. Nice to know you care so...

I have seen commercial pagers around work that operate in the 151 MHz region already. You might have an easier time trying to modify one of these. Also, it is not crystal controlled, nor is it in the Ham band, but I have an FM broadcast receiver that fits in my ear. It is basically similar to a hearing aid, but gets FM instead of amplifying the surrounding area. I have wondered if one of these could be modified to get the ham bands.

Good luck,
Ed

A rare opportunity:

Click on the link below this paragraph to view the full page add from an April 1981 QST magazine. I also have real close-ups available on request. The only component not included in the station is the FTV-107 transverter and phonepatch. Station is a 9 on 10 and all options are installed on the main unit (FT-107M). Boxes and manuals included.

http://www.accent.net/f_ollivier/107add.jpg

I will sell for _best offer_ (via e-mail) on the entire lot. Buyer to pay shipping and insurance (if required).

I will respond to any questions via e-mail.

Good luck, 73....Vince/VE2IFR

Hi

I have 4 Items for sale. I originally had these items posted as for pickup in the MD area. I changed my mind and am willing to ship these items.

Note: The price for the 830 does not include shipping. I am not sure how much it will cost to ship the 830 but if anybody is interested, I can find out

Here are the items I have left:

Kenwood TS-830S HF Transceiver with Shure Desk Microphone- $500
Ameco Preamplifier for HF through 6 Meters- $75
Kantronics VHF1-60 2 Meter Amplifier- $150
MFJ-1276 TNC- $75

For more information, EMAIL me at keithc@mail.com or call me at (410) 682-3594. If you are in the MD area, I can demonstrate the 830 or anything else to show you that it works.

Thanks,

Keith Calligan

Hello. I have a Lenline Handheld Power Microphone for sale. The price is $15 shipped. Please e-mail if interested. The microphone is in perfect working condition and good cosmetic condition. Please e-mail to order or to make trade offers. Here's all of the information on it:

```
-Tone/Volume Control On FRONT
-NO Batteries Or Power Supply Needed
-Amplified Power Microphone
-Heavy Duty Cord W/5 Pin DIN Plug
-Plastic AND Chrome Screening
-Tough And Rugged Casing
-Push To Talk Button On Side
```

=======
Good for you! Keep on trying with the CW, it is worth it for the HF
priviledges.

>I would really appreciate recommendations on what HF gear would be good for
>a first timer. I would love to get some type of transceiver (or separate
>xmit/rcvr) for under $500.
======
I have seen several solid-state type tranceivers for $500-$600
dollars. I bought my rig from Robert Stuedeman (KF8RU), who did have
another one just like it for $500 in one of the news groups earlier
this week. More on my rig below.

>Also comments on what secondary materials are good to have would be
>appreciated (SWR meters, tuners, etc).
=======
Sort of depends on what you really want to do. I think the antenna
setup that I have is one of the most cost effective for all HF bands
that you can get.

>Thanks so very much.
>
>Dean KD5DWO <meds@onramp.net>
>
>
>
=================

I'm a relatively new ham (Aug 1997). I started out as a Tech+, am now
general. Here is what I bought/built/traded for to get started:

USED
Kenwood TS-430s with all filters, hand-mike, FM-430 board
(this is a 160 - 10 meter solid state rig, about 14 years old.)
Kenwood PS-30 power supply
$660.00

USED
RadioShack HTX-202 (2meter handy-talkie)

RadioShack 30 watt amplifier for 2 meters
various accessories, battery packs, charger, speaker-mikes
$200.00

USED
450 ohm ladder line (150 feet)
$15.00

USED
MFJ Electronic Keyer
Bencher Iambic paddles
$75.00

USED
MFJ-941 300 watt antenna tuner (had burnt 12 position inductor switch)
$5.00

USED
generic 30 watt amp for 2 meters
$20.00

NEW
switch to repair tuner (MFJ replacement part)
$8.00
NEW
MFJ-939 W9INN balun
$40.00

NEW at RadioShack, hardware store or hamfest
coax cable
copper antenna wire
connectors
antenna insulators
various parts for several simple interfaces
fuses
capacitors
copper ground strap
8' ground rod
less than $200.00

My math brings that to $1,023.00

So with that, I have a complete base station, and also a
mobile/portable 2 meter station.

At my base station, I use a homebrew 134 foot center fed dipole, as
described in the ARRL Handbook. Took about an hour to build and hang
in the trees. I feed it with 69 feet of 450 ohm ladder line (be sure
your feed line IS NOT equal to 1/4 wave of any operating frequency.).
The ladder line connects to the balun. From the balun I use 10 feet
of coax to the tuner. This antenna is up 50 feet in the oak trees. I
can easily tune all HF bands, anywhere on the band.

For base 2 meters, I use a homebrew 3 element Yagi. I built a "TINY 3" using the plans at:
http://www.qth.com/antenna/tiny3.htm
It is a 3 element Yagi, that has 6.5 db gain, and is also a direct connect. I started out with it at 10 feet above the ground, worked every repeater within 150 miles with 30 watts. Construction time was about an hour.

I have built a couple of interfaces to utilize FREE ham software for digital modes, such as RTTY, CW, PACKET. (I do not count my PC as part of my ham investment, because I already had it)

I use the 2 meter HT in both the base station and in the truck, with an external antenna. Also have a 30 watt amp in the truck now, and run it and the HT from the power jacks (lighters) in the truck.

Just recently bought a used dual bander for the truck, so my HT is my base 2meter rig.

Works like a charm, I am happy.

>
> Wally / AA3RC
>

It would be very easy for you to do so. Are you saying that you didn't get
the 201 reference chart with your radio? Since their manual production did
not keep up with their radio production, they shipped the 200 manual with your
201 radio, along with the 201 quick ref chart.
If the situation is really bothering you, send an e-mail to ADI and explain
that you want the 201 manual. They will ship you one - no cost to you.
Gosh, isn't that easier than bitchin about it on the net?

Brian/N0iMD
happy with my 201

Terry,

Don't blame Burt. It's common knowledge in New England he's got no feelings for anyone but Burt. The rest of us in the east wish nothing but the best for you folks out there where the tragedy occurred. No one would wish this sort of thing on their worst enemy.

Dittos on Poor quality of products they sell!
Their neglected sales person at Dayton may have had better standards
and Quit.
I really hate to see borderline products sold to new hams.
They get frustrated and blame the hobby, Supporting poor quality
radios hurts us all!
The new Hams should not have to learn the hard way.
I am not sure I have the solution.
Honest comments on products offer nice guidelines for most of us.

5237. 10M advice wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-22 00:00:00 UTC
From: wpeloqui@ismi.net
Message-ID: <6k2lkaskm1@nnrp1.dejanews.com>
Source record: 143376

Hi,

I am interested in purchasing a 10 meter mobile for my Jeep. I would really like to get a ICOM 706 or a Kenwood TS-50, but alas, I am a poor man. Does anyone have an opinion on the Ranger RCI-2950 and 2970? Is it worth the 200 extra bucks to go for the 100 Watt model? I have never operated on 10M, but would like to communicate with some friends around the country.

Any antenna recomendations? I was thinking about going with a 108" steel whip. It would look cool on the ol' Wrangler at least! How about performance? Would I be better off going with a fiberglass wound whip, such as a FireStik? My current experience is with di-poles for HF and 2 meters for mobile.

Any comments are welcome.

5238. 9600 BAUD PACKET and ICOM

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-22 00:00:00 UTC
From: !peter@speedline.ca
Message-ID: <3564cf25.10894311@news.speedline.ca>
Source record: 143377

I just picked up a 9600 baud modem for my MFJ 1278 at Dayton on the
wekend.
The rigs that I want to to interface this thing with is pretty old.
(ICOM 471H and 271H)
The manual that comes with the modem does not help with pick off
points on these old rigs.
Has anyone out there any ideas where the proper points are to solder
the leads for the discriminator and modulator on the respective radio?

Any help would be appreciated!

Thanks........Peter, VA3PK.

Hear hear!

Talking with anyone using a portable w/o exterior antenna inside a car
is downright unpleasant. A cheap quarterwave with a magmount costs so
little and the signal improvement is so dramatic one has to wonder why
anyone would do without.

Only my $0.02 worth of course!

WE SUPPLY WOUND CORES FOR SPECIFIC POWER AND RF NEEDS .
WEALSO SELL TOROID SOFTWARE

We have written a Toroid software package for use DC to 300 MHz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side and machining custom phenolic cores from plastic, teflon, wood, ect...
Down load a demo or just view the software main screen at our web

WE SUPPLY WOUND CORES FOR SPECIFIC POWER AND RF NEEDS .
WEALSO SELL TOROID SOFTWARE

We have written a Toroid software package for use DC to 300 MHz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side and machining custom phenolic cores from plastic, teflon, wood, ect...
Down load a demo or just view the software main screen at our web

5257. Re: Realistic HTX100 INFO

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-22 00:00:00 UTC
From: Joe Denison <mjd@ntr.net>
Message-ID: <3564FEB2.AA518EB2@ntr.net>
Source record: 143396

In answer to the below question, I have found that the switch on my HTX-100 does indeed change the power output in both CW and SSB modes. I don't have a watt meter with which to test this, but suffice to say that I have been able to hear stations, but not work them QRP but when I went to QRO they gave me 57 and 59 reports. This to me is sufficient evidence of the functioning status of the switch. From what I gathered from the manual and from questioning a ham who works for the Shack, the switch, unless modified, should function in both modes.

Just my $.02 worth,
Joe Denison

5258. Have same radio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-22 00:00:00 UTC
From: johnn3kbs@aol.com
Message-ID: <1998052205205300.BAA22216@ladder03.news.aol.com>
Source record: 143397

The err2 I believe is a PLL unlocked error that will have to be fixed by the manufacturer. The frequency offset can be changed - I had the same problem with mine at first. The details are in the manual - you have to go into the setup mode on the radio to change the offset. I do not have the radio or manual in front of me but it is an easy problem to remedy.

5259. New Ham Needs Recommendation on Gear

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-22 00:00:00 UTC
From: Dean Wooldridge <meds@onramp.net>
Message-ID: <6k3170$n3e$1@news.onramp.net>
Source record: 143398

Help, help, please.

I'm a very new ham (tech) working hard to get that code done! I'm on VHF
but really want to reach out far..... and touch someone.

The Arlington, TX HAMCOM comes up at the first of June and I'm hoping to be
able to pickup some HF gear. Problem is I don't know what would be
suitable.

I would really appreciate recommendations on what HF gear would be good for
a first timer. I would love to get some type of transceiver (or separate
xmit/rcvr) for under $500.

Also comments on what secondary materials are good to have would be
appreciated (SWR meters, tuners, etc).

Thanks so very much.

Dean KD5DWO <meds@onramp.net>

Attention Fellow Computer Enthusiast:

***** C O M P U T E R S O F T W A R E F R A U D A L E R T *****

%%%%%%%%%% C O R E L S O F T W A R E E X P O S E D %%%%%%%%%%

HERE'S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

'THE SOFTWARE FROM HELL'.

I've never used the product they were referring to, so I can't comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** S O F T W A R E F R O M H E L L ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN'T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON'T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel's own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel's Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL'S WORLD WIDE WEBSITE:
==========

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==========

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
==========

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
==========

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in ?Show Codes? no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a ? (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a ? (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the ?WP6.x Export? now reads ?WP6.x,7.x Export? in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG?s.

Fixes in 3.5.1 patch
====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments?such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==========

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel's website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise

full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

My experience is that when there is a car close by, like a big truck, it can happen more often. I wonder if it is the reflected signal, or it affects my SWR or something. Most of the duplexers inside are pretty cheap design. Also check your freq. because it could be close enough to be on a harmonic. I use FT-8500 at home and in my car.

WHO RULES AMERICA?

The Alien Grip on Our News and Entertainment Media Must Be Broken

By the Research Staff of National Vanguard Magazine, PO Box 330, Hillsboro, West Virginia 24946 USA. FAX# 304-653-4690

http://ww.natall.com

There is no greater power in the world today than that wielded by the manipulators of public opinion in America. No king or pope of old, no conquering general or high priest ever disposed of a power even remotely approaching that of the few dozen men who control America's mass news and entertainment media.

Their power is not distant and impersonal; it reaches into every home in America, and it works its will during nearly every waking hour. It is the power which shapes and molds the mind of virtually every citizen, young or old, rich or poor, simple or sophisticated.

The mass media form for us our image of the world and then tell us what to think about that image. Essentially everything we know -- or think we know -- about events outside our own neighborhood or circle of acquaintances comes to us via our daily newspaper, our weekly news magazine, our radio, or our television.

It is not just the heavy-handed suppression of certain news stories from our newspapers or the blatant propagandizing of history-distorting TV "docudramas" which characterizes the opinion-manipulating techniques of the media masters. They exercise both subtlety and thoroughness in their management of both the news and the entertainment which they present to us.

For example, the way in which the news is covered: which items are emphasized and which are played down, the reporter's choice of words, tone of voice, and facial expressions; the wording of headlines; the choice of illustrations -- all of these things subliminally and yet profoundly affect the way in which we interpret what we see or hear.

On top of this, of course, the columnists and editors remove any remaining doubt from our minds as to just what we are to think about it all. Employing carefully developed psychological techniques, they guide our thought and opinion so that we can be in tune with the "in" crowd, the "beautiful people," the "smart money." They let us know exactly what our attitudes should be

toward various types of people and behavior by placing those people or that behavior in the context of a TV drama or situation comedy and having the other TV characters react to them in the Politically Correct way.

Molding American Minds

For example, a racially mixed couple will be respected, liked, and socially sought after by other characters, as will a "take charge" Black scholar or businessman, or a sensitive and talented homosexual, or a poor but honest and hardworking illegal alien from Mexico. On the other hand, a White racist -- that is, any racially conscious White person who looks askance at miscegenation or at the rapidly darkening racial situation in America -- is portrayed, at best, as a despicable bigot who is reviled by the other characters, or, at worst, as a dangerous psychopath who is fascinated by firearms and is a menace to all law-abiding citizens. The White racist "gun nut," in fact, has become a familiar stereotype on TV shows.

The average American, of whose daily life TV-watching takes such an unhealthy portion, distinguishes between these fictional situations and reality only with difficulty, if at all. He responds to the televised actions, statements, and attitudes of TV actors much as he does to his own peers in real life. For all too many Americans the real world has been replaced by the false reality of the TV environment, and it is to this false reality that his urge to conform responds. Thus, when a TV scriptwriter expresses approval of some ideas and actions through the TV characters for whom he is writing, and disapproval of others, he exerts a powerful pressure on millions of viewers toward conformity with his own views.

And as it is with TV entertainment, so it is also with the news, whether televised or printed. The insidious thing about this form of thought control is that even when we realize that entertainment or news is biased, the media masters still are able to manipulate most of us. This is because they not only slant what they present, but they establish tacit boundaries and ground rules for the permissible spectrum of opinion.

As an example, consider the media treatment of Middle East news. Some editors or commentators are slavishly pro-Israel in their every utterance, while others seem nearly neutral. No one, however, dares suggest that the U.S. government is backing the wrong side in the Arab-Jewish conflict and that it served Jewish interests rather than American interests to send U.S. forces to cripple Iraq, Israel's principal rival in the Middle East. Thus, a spectrum of permissible opinion, from pro-Israel to nearly neutral, is established.

Another example is the media treatment of South Africa. Some commentators seem almost dispassionate in reporting the news of racial strife from that country, while in the voices of other commentators there is open hatred of the White South Africans

and unrestrained admiration for the Blacks. All of the media spokesmen without exception, however, take the Black side; they differ only in the degree of their partisanship.

Because there are differences in degree, however, most Americans fail to realize that they are being manipulated. Even the citizen who complains about "managed news" falls into the trap of thinking that because he is presented with an apparent spectrum of opinion he can escape the thought controllers' influence by believing the editor or commentator of his choice. It's a "heads I win, tails you lose" situation. Every point on the permissible spectrum of public opinion is acceptable to the media masters -- and no impermissible fact or viewpoint is allowed any exposure at all, if they can prevent it.

The control of the opinion-molding media is monolithic. All of the controlled media -- television, radio, newspapers, magazines, books, motion pictures -- speak with a single voice, each reinforcing the other. Despite the appearance of variety, there is no real dissent, no alternative source of facts or ideas accessible to the great mass of people which might allow them to form opinions at odds with those of the media masters. They are presented with a single view of the world -- a world in which every voice proclaims the equality of the races, the inerrant nature of the Jewish "Holocaust" tale, the wickedness of attempting to halt a flood of non-White aliens from pouring across our borders, the danger of permitting citizens to keep and bear arms, the moral equivalence of all sexual orientations, and the desirability of a "pluralistic," cosmopolitan society rather than a homogeneous one. It is a view of the world designed by the media masters to suit their own ends -- and the pressure to conform to that view is overwhelming. People adapt their opinions to it, vote in accord with it, and shape their lives to fit it.

Television Broadcasting

And who are these all-powerful masters of the media?

For a partial answer, consider television broadcasting, which undoubtedly has become the most powerful medium for determining the way Americans think and behave.

Not counting certain specialized cable news systems, virtually all national and international TV news broadcast in the United States is gathered, filmed, edited, and put on the air by just three companies: American Broadcasting Companies (ABC), Columbia Broadcasting System (CBS), and National Broadcasting Company (NBC). Most televised entertainment programs viewed by Americans are broadcast by the same three networks. Each of these three has been under the absolute control of a single man over a long enough period of time -- ranging from 32 years to 55 years -- for him to staff the corporation at every level with officers of his choosing and thus to place his imprint finally, totally, and indelibly upon it.

In each case that man has been a Jew.

Until 1985, when ABC merged with Capital Cities Communications, Inc., a New York-based media conglomerate, the chairman of the board of directors and chief executive officer (CEO) of the network was Leonard Harry Goldenson, a Jew. He had headed the network since he became president of the predecessor corporation, American Broadcasting-Paramount Theaters, Inc., in 1953. (The name was changed to American Broadcasting Companies, Inc., in 1965.) In an interview published in the April 1, 1985, issue of Newsweek, Goldenson boasted, "I built this company [ABC] from scratch."

Under the 1985 merger terms, Goldenson became chairman of the executive committee of the new company, Capital Cities/ABC, Inc.

Although the chairman and CEO of Capital Cities now is Thomas Murphy, a Gentile, he has made no move to replace the men at ABC who served Goldenson, and the network retains its Jewish character today.

CBS was under the domination of William S. Paley for more than half a century. The son of immigrant Jews from Russia, Paley left the family cigar business in 1928, when he was 27, to buy United Independent Broadcasters for $500,000. He renamed it Columbia Broadcasting System and made himself president. He became chairman of the board in 1946 and held that post until his partial retirement in 1983.

When independent broadcaster Ted Turner, a Gentile, made a bid to buy CBS in 1985, there was panic in media boardrooms across the nation. Turner had made a fortune in advertising and then had built a successful cable-TV news network, CNN. Although Turner employed a number of Jews in key executive positions in CNN and had never taken public positions contrary to Jewish interests, he is a man with a large ego and a strong personality and was regarded by Paley and the other Jews at CBS as uncontrollable: a loose cannon who might at some time in the future turn against them. Furthermore, Jewish newsman Daniel Schorr, who had worked for Turner, publicly charged that his former boss held a personal dislike for Jews.

To block Turner's bid CBS executives invited billionaire Jewish theater, hotel, insurance, and cigarette magnate Laurence Tisch to launch a "friendly" takeover of the company, and since 1986 Tisch has been the chairman and CEO of CBS, removing any threat of non-Jewish influence there.

NBC was formerly a subsidiary of Radio Corporation of America (RCA), which was controlled for 40 years, beginning in 1930, by David Sarnoff, another Jewish immigrant from Russia. When Sarnoff died in 1970 his son Robert took over. In 1986 General Electric Co. merged with RCA, and now NBC is a wholly owned subsidiary of General Electric.

There has been no move by top G-E management to change the Jewish "profile" of NBC or to replace key Jewish personnel. To the contrary, new Jewish executives have been added: examples are Steve Friedman,

hired in May 1990 as executive producer of NBC Nightly News and succeeded in January 1993 by Jeff Zuker.

Entertainment Industry

The extraordinary concentration of Jews in the TV industry certainly explains much of the bias of television news. As important as the control of television news programming is, however, television entertainment is even more decisive in determining the way Americans think. Tens of millions of Americans, especially younger ones, never watch network TV news broadcasts, but instead keep their sets tuned to the entertainment programs. And it is in the entertainment field that Jews have maintained the firmest control.

The man in charge of the television entertainment division at CBS is Jeff Sagansky. At ABC the entertainment division is run by two men: Ted Harbert handles the business end of the division, and Stuart Bloomberg is in charge of entertainment programming. Brandon Tartikoff became president of NBC Entertainment in 1980 and held that post for a decade, until he was promoted to chairman in 1990. When he left NBC in July 1991 to take the post of chairman at Paramount Pictures the new president of NBC Entertainment, Warren Littlefield, assumed control.

Sagansky, Bloomberg, and Littlefield pick the programs their networks will broadcast: the game shows, the interview shows, the situation comedies, the historical "docudramas," the family series, the adventure series, the specials. They tell the program developers what they want to see in the programs. They veto anything they don't like. They determine the slant each program will have. They decide just how hard to push various propaganda themes in their network programming: interracial marriage, homosexuality, feminism, gun control, "Holocaust" re-enactments, the menace of "White extremism."

Only one in 36 U.S. citizens (2.8 per cent) is a Jew. But nearly all of the men who shape young Americans' concept of reality, of good and evil, of permissible and impermissible behavior are Jews. In particular, Sagansky and Bloomberg are Jews. So is Tartikoff. Littlefield is the only Gentile who has had a significant role in TV entertainment programming in recent years. This Jewish control of the American entertainment industry and its influence on the American psyche goes far beyond television programming for the major networks; it also includes virtually everything which comes out of Hollywood's film studios. The May 1990 issue of American Film magazine listed the top 10 (in terms of gross revenues in 1989) U.S. entertainment companies and their CEOs and ranked them by size. They were, in descending order, Time Warner Communications (Steven J. Ross), Walt Disney Co. (Michael D. Eisner), NBC (Robert C. Wright), Paramount Communications (Martin S. Davis), CBS (Laurence A. Tisch), 20th Century Fox Film Corp. (Barry Diller), Columbia Pictures Entertainment (Victor A. Kaufman), Viacom Inc. (Sumner Redstone), Capital Cities/ABC (Thomas S. Murphy), and MCA Inc. (Lew Wasserman). Of the 10 top

entertainment CEOs listed above, eight -- Ross, Eisner, Davis, Tisch, Diller, Kaufman, Redstone, and Wasserman -- are Jews. Only two of the top-10 entertainment companies have Gentile CEOs -- NBC and Capital Cities/ABC -- and one of those -- Capital Cities/ABC -- has a Jew in charge of its entertainment division.

There have been a few personnel changes since the 1989 survey, of course. When Japan's Sony Corporation of America bought Columbia Pictures in October 1989, Victor Kaufman was replaced by Peter Guber, also a Jew. Guber's overseer is Sony's vice-chairman Michael P. Schulhof, who arranged the takeover; he is a Jew too. In 1991 MCA was bought by Matsushita, one of Sony's Japanese rivals, but Wasserman remains in his old post. As a general rule, the Japanese are motivated solely by economic interests in their buying of American media, and they leave the propaganda to the Jews. More often than not, in fact, Jews are the brokers of such Japanese media buyouts. Just as Schulhof handled the Sony takeover of Columbia, the Matsushita-MCA deal was arranged by Jewish media magnate Michael Ovitz and Texas-Jewish wheeler-dealer Robert Strauss, later appointed as George Bush's ambassador to Moscow. Steven J. Ross died in December 1992, and now the top post at Time Warner is held by CEO (and chairman) Gerald Levin, also a Jew.

Barry Diller left Fox in February 1992. Rupert Murdoch, owner of News Corporation, Fox's parent company, took a hand in the management of Fox for a few months, but in November 1992 Peter Chernin, formerly head of the Fox Entertainment division, moved up to the top job as chairman of 20th Century Fox Films Corp. Chernin is a Jew. Under him, as president of Fox Entertainment Group since November 1992, is Sandy Grushow, also a Jew.

And Sumner Redstone (born Murray Rothstein) has gained much prominence since 1989, as two of his Viacom subsidiaries, MTV and Nickelodeon, have acquired larger and larger shares of the juvenile television audience. Redstone, who actually owns 76 per cent of the shares of Viacom ($3 billion), is the largest single purveyor of race-mixing propaganda to White teenagers and sub-teens in America and Europe. MTV pumps its racially mixed rock and rap videos into 210 million homes in 71 countries and is the dominant cultural influence on White teenagers around the world. Nickelodeon has by far the largest share of the four-to-11-year-old TV audience in America and also is expanding rapidly into Europe; most of its shows do not yet display the blatant degeneracy which is MTV's trademark, but Redstone is gradually nudging the fare presented to his kiddie viewers toward the same poison purveyed by MTV.

It is difficult to believe that such an overwhelming degree of control of the entertainment industry by Jews came about without a deliberate, concerted effort on their part.

Radio Broadcasting

The "big three" TV networks -- ABC, CBS, and NBC -- not only have a virtual monopoly on commercial network television broadcasting in the United States; they account for most of commercial network radio broadcasting as well -- or they did until recently. For many years their only significant competitor in the latter arena, Mutual Broadcasting System (MBS), with 941 affiliated radio stations (but no TV stations) across the country, was headed by Martin Rubenstein, a Jew. In 1985 Norman J. Pattiz, also a Jew, took over MBS as chairman and CEO. Two years later Pattiz, through his holding company, Westwood One, Inc., bought the NBC Radio Network from General Electric. The MBS and NBC stations together make Pattiz the number-two radio broadcaster in the nation, behind only Capital Cities/ABC. The current MBS vice-president in charge of news broadcasting, Ron Nessen, who formerly held the position of White House press secretary under Gerald Ford, is also a Jew.

Newspapers

After television, daily newspapers are the most influential mass medium in America. Sixty-three million of them are sold (and presumably read) each day. These millions are divided among some 1,640 different publications. One might conclude that the sheer number of different newspapers across America would provide a safeguard against minority control and distortion. Alas, such is not the case. There is less independence, less competition, and much less representation of majority interests than a casual observer would think.

Only 412 (25 per cent) of the 1,640 publications are independently owned; the rest belong to multi-newspaper chains. Only 121 of the total number have circulations of more than 100,000. Only a handful are large enough to maintain independent reporting staffs outside their own communities; the rest must depend on these few for all of their national and international news.

In only 54 cities in America are there more than one daily newspaper, and competition is frequently nominal even among them, as between morning and afternoon editions under the same ownership. Examples of this are the Huntsville, Alabama, morning News and afternoon Times; the Birmingham, Alabama, morning Post Herald and afternoon News; the Mobile, Alabama, morning Register and afternoon Press; the Springfield, Massachusetts, morning Union, afternoon News, and Sunday-only Republican; the Syracuse, New York, morning Post-Standard and afternoon Herald-Journal -- all owned by the Jewish Newhouse brothers through their holding company, Advance Publications.

The Newhouse media empire provides an example of more than the lack of real competition among America's daily newspapers; it also illustrates the insatiable appetite Jews have shown for all the organs of opinion control on which they could fasten their grip. The Newhouses own 31 daily newspapers, including several large and important ones, such as the Cleveland Plain Dealer, the Newark Star-Ledger, and the New Orleans Times-Picayune; the nation's largest trade book publishing conglomerate, Random House, with all its subsidiaries; Newhouse

Broadcasting, consisting of 12 television broadcasting stations and 87 cable-TV systems, including some of the country's largest cable networks; the Sunday supplement Parade, with a circulation of more than 22 million copies per week; some two dozen major magazines, including the New Yorker, Vogue, Mademoiselle, Glamour, Vanity Fair, Bride's, Gentlemen's Quarterly, Self, House & Garden, and all the other magazines of the wholly owned Conde Nast group.

This Jewish media empire was founded by the late Samuel Newhouse, an immigrant from Russia. When he died in 1979 at the age of 84, he bequeathed media holdings worth an estimated $1.3 billion to his two sons, Samuel and Donald. With a number of further acquisitions, the net worth of Advance Publications has grown to more than $8 billion today.

The gobbling up of so many newspapers by the Newhouse family was in large degree made possible by the fact that newspapers are not supported by their subscribers, but by their advertisers. It is advertising revenue -- not the small change collected from a newspaper's readers -- that largely pays the editor's salary and yields the owner's profit.

Whenever the large advertisers in a city choose to favor one newspaper over another with their business, the favored newspaper will flourish while its competitor dies. Since the beginning of this century, when Jewish mercantile power in America became a dominant economic force, there has been a steady rise in the number of American newspapers in Jewish hands, accompanied by a steady decline in the number of competing Gentile newspapers -- primarily as a result of selective advertising policies by Jewish merchants.

Furthermore, even those newspapers still under Gentile ownership and management are so thoroughly dependent upon Jewish advertising revenue that their editorial and news reporting policies are largely constrained by Jewish likes and dislikes. It holds true in the newspaper business as elsewhere that he who pays the piper calls the tune.

Three Jewish Newspapers

The suppression of competition and the establishment of local monopolies on the dissemination of news and opinion have characterized the rise of Jewish control over America's newspapers. The resulting ability of the Jews to use the press as an unopposed instrument of Jewish policy could hardly be better illustrated than by the examples of the nation's three most prestigious and influential newspapers: the New York Times, the Wall Street Journal, and the Washington Post. These three, dominating America's financial and political capitals, are the newspapers which set the trends and the guidelines for nearly all the others. They are the ones which decide what is news and what isn't, at the national and international levels. They originate the news; the others merely copy it. And all three

newspapers are in Jewish hands.

The New York Times is the unofficial social, fashion, entertainment, political, and cultural guide of the nation. It tells America's "smart set" which books to buy and which films to see; which opinions are in style at the moment; which politicians, educators, spiritual leaders, artists, and businessmen are the real comers. And for a few decades in the last century it was a genuinely American newspaper.

The New York Times was founded in 1851 by two Gentiles, Henry J. Raymond and George Jones. After their deaths, it was purchased in 1896 from Jones's estate by a wealthy Jewish publisher, Adolph Ochs. His great-grandson, Arthur Ochs Sulzberger, Jr., is the paper's current publisher and CEO. The executive editor is Max Frankel, and the managing editor is Joseph Lelyveld. Both are Jews.

The Sulzberger family also owns, through the New York Times Co., 33 other newspapers, including the Boston Globe, purchased in June 1993 for $1.1 billion; twelve magazines, including McCall's and Family Circle with circulations of more than 5 million each; seven radio and TV broadcasting stations; a cable-TV system; and three book publishing companies. The New York Times News Service transmits news stories, features, and photographs from the New York Times by wire to 506 other newspapers, news agencies, and magazines. Of similar national importance is the Washington Post, which, by establishing its "leaks" throughout government agencies in Washington, has an inside track on news involving the Federal government.

The Washington Post, like the New York Times, had a non-Jewish origin. It was established in 1877 by Stilson Hutchins, purchased from him in 1905 by John R. McLean, and later inherited by Edward B. McLean. In June 1933, however, at the height of the Great Depression, the newspaper was forced into bankruptcy. It was purchased at a bankruptcy auction by Eugene Meyer, a Jewish financier and former partner of the infamous Bernard Baruch, industry czar in America during the First World War.

The Washington Post is now run by Katherine Meyer Graham, Eugene Meyer's daughter. She is the principal stockholder and the board chairman of the Washington Post Co. In 1979 she appointed her son Donald publisher of the paper. He now also holds the posts of president and CEO of the Washington Post Co.

The Washington Post Co. has a number of other media holdings in newspapers, television, and magazines, most notably the nation's number-two weekly newsmagazine, Newsweek. The Wall Street Journal, which sells 2.1 million copies each weekday, is the nation's largest-circulation daily newspaper. It is owned by Dow Jones & Co., Inc., a New York corporation which also publishes 24 other daily newspapers and the weekly financial tabloid Barron's, among other things. The chairman and CEO of Dow Jones is Peter R. Kann, who is a Jew. Kann also holds the posts of chairman and publisher of the Wall

Street Journal.

New York's other major newspapers are in no better hands than the New York Times and the Wall Street Journal. In January 1993 the New York Daily News was bought from the estate of the late Jewish media mogul Robert Maxwell (born Ludvik Hoch) by Jewish real-estate developer Mortimer B. Zuckerman. The Village Voice is the personal property of Leonard Stern, the billionaire Jewish owner of the Hartz Mountain pet supply firm. The New York Post, suffering from severe financial problems, has been bouncing back and forth for a year among a succession of especially sleazy Jewish billionaires -- Peter Kalikow, Steven Hoffenberg, Abraham Hirshfeld -- and Australian newspaper mogul Rupert Murdoch.

Other Mass Media

The story is pretty much the same for other media as it is for television, radio, and newspapers. Consider, for example, newsmagazines. There are only three of any note published in the United States: Time, Newsweek, and U.S. News & World Report.

Time, with a weekly circulation of 4.1 million, is published by a subsidiary of Time Warner Communications, the new media conglomerate formed by the 1989 merger of Time Inc. with Warner Communications. The CEO of Time Warner Communications, as mentioned above, is Gerald Levin, a Jew.

Newsweek, as mentioned above, is published by the Washington Post Co., under the Jewess Katherine Meyer Graham. Its weekly circulation is 3.2 million.

U.S. News & World Report, with a weekly circulation of 2.3 million, is owned and published by the aforementioned Mortimer B. Zuckerman, who also has taken the position of editor-in-chief of the magazine for himself. Zuckerman also owns the Atlantic Monthly and New York's tabloid newspaper, the Daily News.

Or consider books. There are literally thousands of publishers in the United States, and among these thousands are many with little or no direct Jewish control; there are some which actually dare to publish books not approved by the Jewish Establishment. But all of the latter publishers are very small, and their books seldom reach the great mass of Americans who buy their reading material from drugstore news racks or from the chain bookstores.

Among the giant publishing conglomerates, however, the situation is quite kosher. Three of the six largest book publishers in the United States, according to Publishers Weekly, are owned or controlled by Jews. The three are first-place Random House (with its many subsidiaries, including Crown Publishing Group), third-place Simon & Schuster, and sixth-place Time Warner Trade Group (including Warner Books and Little, Brown).

As pointed out above, the Newhouse family owns Random House, and Gerald Levin is CEO of Time Warner Communications, of which Time Warner Trade Group is a division. Simon & Schuster is a subsidiary of Paramount Communications, Inc. (formerly Gulf and Western, Inc.), of whom the chairman and CEO is Martin S. Davis, as already noted.

Another publisher of special significance is Western Publishing. Although it ranks only 13th in size among all U.S. publishers, it ranks first among publishers of children's books, with more than 50 per cent of the market. Its chairman and CEO is Richard Bernstein, a Jew.

Those are the facts of media control in America. Anyone willing to spend a few hours in a large library looking into current editions of yearbooks on the radio and television industries and into directories of newspapers and magazines; into registers of corporations and their officers, such as those published by Standard and Poors and by Dun and Bradstreet; and into standard biographical reference works can verify their accuracy. They are undeniable, and when confronted with them Jewish spokesmen customarily will use evasive tactics. "Ted Turner isn't a Jew!" they will announce triumphantly, as if that settled the issue. If pressed further they will accuse the confronter of "anti-Semitism" for even raising the subject. It is fear of this accusation which keeps many persons silent who know the facts.

But we must not remain silent on this most important of issues! The Jewish control of the American mass media is the single most important fact of life, not just in America, but in the whole world today. There is nothing -- plague, famine, economic collapse, even nuclear war -- more dangerous to the future of our people.

By permitting the Jews to control our news and entertainment media we are doing more than merely giving them a decisive influence on our political system and virtual control of our government; we also are giving them control of the minds and souls of our children, whose attitudes and ideas are shaped more by Jewish television and Jewish films than by parents, schools, or any other influence.

The Jew-controlled entertainment media have taken the lead in persuading a whole generation that homosexuality is a normal and acceptable way of life; that there is nothing at all wrong with White women dating or marrying Black men, or with White men marrying Asiatic women; that all races are inherently equal in ability and character -- except that the character of the White race is suspect because of a history of oppressing other races; and that any effort by Whites at racial self-preservation is reprehensible.

Our Responsibility

We must oppose the further spreading of this poison among our people, and we must break the power of those who are spreading it. It would be intolerable for such power to be in the hands of any alien minority, with values and interests different from our own. But to permit the Jews, with their 3,000-year history of nation-wrecking, from ancient Egypt to Russia, to hold such power over us is tantamount to race suicide. Indeed, the fact that so many White Americans today are so filled with a sense of racial guilt and self-hatred that they actively seek the death of their own race is a deliberate consequence of Jewish media control.

Once we have absorbed and understood the fact of Jewish media control, it is our inescapable responsibility to do whatever is necessary to break that control. We must shrink from nothing in combatting this evil power which has fastened its deadly grip on our people and is injecting its lethal poison into their minds and souls. If we fail to destroy it, it certainly will destroy our race. Let us begin now to acquire knowledge and take action toward this necessary end.

(Let me take these last few moments to urge you to get the book that is sweeping like wildfire across America, and awakening the American people to their peril. By educating Americans, by getting the truth - the whole truth, not just a watered-down partial truth - into their hands and hearts and minds, we can take back America and make her great, strong, and beautiful once again. Write today for our radio offer Number 4, which is our huge 217-page encyclopedic collection of the best articles from our patriotic newspaper from over a twelve-year period. Just send a contribution of $25 or more to National Vanguard Books, Department R, PO Box 90, Hillsboro WV 24946 USA. Send whatever you can to help this truth-telling program on the air, a minimum of $25 and remember to ask for radio Offer Number 4.)

Can you be more specific as to what the symptoms are? Circuits in new radios are under a lot of CPU control, some other problem might be shutting down TX. Do you see red LED and bar graph when you key up? If you don't, do you still hear it's signal on a nearby receiver? Does it receive? How much current does it draw when the problem occurs? If your problem occurs only above 146 MHz on 2m, and only above 440 MHz on UHF the problem is definitely related to bad extended TX modification.

Adnan, Icom America Service

Media is focusing too much on one violence.

As media broadcasts the violence, the situation becomes even worse
(you hear this and this is going on and so forth and some people think
it is normal to do such thing). Anyway... please don't focus too
much... you will make it even worse...

There was a research done regarding to the TV / movie etc. There was
a small community with no TV (ie. no freq to receive and no cables
either). After setting up the TV system (either freq or cable), the
crime rate raised suddenly by 2 times or more.

As for guns, I believe that the parents are responsible.
If the parents are responsible for their kids, the kids will be
responsible for themselves. It's natural. And amazing enough...
most kids (who get focused on medias) get guns from their family...

There are about 40,000 deaths do to DUI in the US each year. Obviously
cars are the problem. Should the government come to your house and
confiscate your car?

If the cars did not exist, 40,000 people who died last year would be
alive.

Still for sale (lots of tire kickers, but no takers) - *package only* - I don't want to separate the items:

(1) Kenwood TR851A UHF all-mode transceiver; 430-440 MHz, all-mode rig w/25 watts out. Rig is a cosmetic 8, but 100% functional in every way. It includes owners/service manuals, hand mic, and power cord

(1) Mirage D3010N UHF Amp; 100W out, perfect match for the TR851A. In perfect physical and functional condition. Includes manual, power cord, and box

$600 for the pair, shipped to your door.

Serious buyers only, please.

Please drop me a note at: PEKnSLK@aol.com if interested.

73, and have a safe holiday weekend!

Ron,

Thanks for the response. On the FT-8500 (mine at least), the secondary
receiver isn't muted at all. I'm not aware of a means by which this can be
modified, though it would be nice to have it automatically go to 20% volume
or something similar anytime the other transmitter is keyed.

No, he might have left explosives (one of his "interests"), or thrown a
molatov cocktail, or mixed up a toxic gas from recipes on the 'net, or
driven a car into a crowd of students, or any number of other forms of mayhem.

If he had been thrown into jail when he was caught and arrested for
bringing a **stolen** gun to school the day before instead of having his
hands slapped and being sent home to his so-called parents, do you think
he would have been in that cafeteria?

Burt: unencumbered by the thought process.

I don't have one myself but from the description of the problem it
sounds like you will need a new EEPROM for the unit. It is possible
that the mod had already been performed. When the mod first became
known, there was a report similar to yours about this happening. You
might check out DejaNews to find the relavent article.

> VK4CWT
After installing the DSP unit into your IC-706, you will find a new menu, S4. On this menu are 3 choices:
NF
NR
NRL

The "NF" button toggles on/off the automatic "Notch Filter" feature. The DSP will automatically notch out a particular audio frequency that seems to be extraneous to the rest of the signal. For example, while trying to work a distant station on 10 meter SSB while driving back from the Dayton Hamvention (where I bought my DSP), I heard someone injecting a tone into the pileup as he tuned up his antenna. I hit the NF, and the offending tone disappeared like magic. I turned the NF off, and sure enough, he was still tuning up and making noise, it wasn't just a coincidence that his noise disappeared when I hit the NF.

The "NR" button toggles on/off the "Noise Reduction" function. More on that in a second.

The "NRL" button allows you to set the "Noise Reduction Level". Once you push this button, the menu area shows a numeric value from 0 to 15 arbitrary units of noise reduction, and you can turn it up or down using the detented knob that normally selects a memory channel.

Basically, as the NRL increases, the noise reduction increases, but the signal's audio quality also decreases. You need to strike a balance between the amount of each effect that you need and are willing to tolerate.

The first time I turned on the IC-706 after performing the installation, I tuned to the 10 meter band on SSB. As usual, there was plenty of "white noise" plus ignition noise from my vehicle. I stumbled through the menus until I found the DSP menu (I had read the instructions too quickly and was looking for M4 instead of S4), and hit the NR button. Like magic, the background noise faded out over 2-3 seconds, as if I had just turned up the squelch! And yet real signals still came through.

I have too little air-time so far to tell if the DSP will allow me to make contacts I would have otherwise missed, HOWEVER I can say without question that it will at LEAST reduce the fatigue factor of listening to the typical white noise of an inactive band while hunting for a contact for prolonged periods of time. I think my investment was well

worth it, even though the unit isn't as sophisticated or as powerful as something like a Timewave DSP599zx. And, of course, it has the advantage of always being there in the radio if you want to use it, with no extra boxes to carry around or plug into place. (Obviously, that may be a DISADVANTAGE if you have several radios without DSP's in them and would like to share one high-end DSP among several of them.)

I have for sale various ham related books and cd's, also some software I don't need anymore. All software includes manuals. All prices include shipping. Here is the list.

Books:
Antennas and Techniques for Low Band DXing by John Devoldere $15.
Vertical Antenna by William Orr W6SAI
$10.

ARRL books and CD's
Your VHF companion
$5.
Your Packet Companion
$5.
Vertical Antenna Classics
$10.
Radio Buyers Sourcebook vol. 1
$10
VHF/UHF Radio Buyers Sourcebook
$10.
Operating Manual 5th edition
$15.
1998 Radio Amateur Callbook
$30.

Non ham related software all on CD's
Microsoft Visual J++ Professional
$25.
Corel Cad version 1
$50.
Norton Utilities for Windows 95 version 2.0
$25.
Comanche 3 helicopter game
$20.
Activision Spycraft
$15.
Tom Clancy's SSN submarine game
$15.

Please inquire by email if interested.

> Comments on either rig, anyone?

Some additional info...

I've previously owned an Icom R71-A receiver which I LOVED and a Kenwood TS-430S which I was I was HAPPY with, but didn't like as much as the ICOM (then again, the Icom couldn't transmit).

Between the 756 and the 870, I'm leaning to the 756 for the following reasons:

Better sensitivity/Dynamic Range numbers in QST
Dual Watch
Transmit Audio manipulation

and also the following "features" which are NICE, but not as important in my book:
6 meters
Spectrum Scope
Easier Mars/Cap modification.

Reasons I might consider the 870:
Better construction quality in Kenwood vs. Icom (so I've heard)
"Brick wall" DSP filters in the IF

Being a 90 and 60 meter broadcast band DXer before I was a ham makes me very "receiver-cetric", which is why the filters in the 870 mean a lot to me. But, not having ANY REAL experience with digital IF filters (only add-on audio ones, and I KNOW their limitations), I wonder how WONDERFUL they really are?

So, that was a little background. ANY assistance would be helpful here. Please e-mail me, or better yet post here to share the info with the group (and maybe even start a RELEVANT thread here in the newsgroup. Wow, now THATS a concept :))

Genie

A man found a bottle and was dusting it off when a genie appeared. The genie said, "I will grant you only one wish, what will it be?" After thinking a moment the man said, "Well, I have plenty of money, a nice house and a wonderful family, but there is one thing I would like to have: a vacation. I know, I would like to go to Hawaii, but I don't like to fly, and boats make me sick. What I want you to do is to build a bridge from California to Hawaii so that any time I want to go there I can drive." The genie replied, "WOW, do you realize what a tremendous request that is? That is over a thousand miles and across probably the deepest part of the Pacific ocean. Can you comprehend how much steel and concrete that would take? That would be a tremendous undertaking. Are you sure there isn't something else you would like to wish?" The man thought for a minute and said, "Yes. Please explain hams to me. They are so boring, they repeat things, they never show any guts and they hide behind their mikes. How can anybody have a life like that? The genie replies
"Will that be 4 or 6 lanes."

I like that Burt. I think it is funny, however I have been a Ham for over 25 yrs and very much enjoy talking to people all over the world. I don't think you can explain Hams anymore that you can explain life. There are too many aspects of the hobby to narrow it down to one simple answer.
I do enjoy most of your responses to other folks (most don't realize that they are the one being had).

Hmmmmm.... shoving too many mA's up the scanner's ying yang sounds improbbable since the scanner will only draw what it needs according to ohm's law. More probabble is your friend use an incorrectly polarized AC adapter? Maybe it was set on the wrong voltage? (too high)? I'd be curious to find out what the exact problem is.

You've clearly stated the problem. However, you failed to state the
cause.

Burt won't go somewhere else, even with all the ridicule that's been
heaped on him. He, by some perverted reasoning, thinks that he's not
only right but that he can also post off topic at will.

Now for the cure: Filter Burts posts.

>Neither UPS, FedEx or TNT have been able to find a parcel originating
>from his zip code going to Spain, so I am sure it has not been sent.

Neither UPS or Fedex can track a package this way. Absence of proof is not
proof of absence.

I can relate some personal experience here. I ordered a DF Jr in November
96, and
got it in early January, (which is not too bad really, given the other
orders I had out with much
bigger companies that took longer to arrive)

When it got here, I had some initial trouble, and joe spent quite a lot of
time with me on the
phone (his nickel) to resolve it. Turns out that the combination of -10F
weather, gloves, and
me trying to out-think the unit were the problem. (press the buttons
gently!)

I have seen joe replace antenna units that were clearly blown by
transmitting into them, even
though it wasn't his fault, and this limitation is clearly spelled out in
the manual. (BTW, some
HT's key up momentarily on powerup, I use a scanner.) It's quite
unmistakable, there isn't
enough energy available in that circuit to blow the tops off the amplifiers
unless it comes
up the coax from a transmitter.

As of last november, I began working with him on the uPLL project, and I'm
happy to say that it's
shipping, and people are very pleased with it.

Remember folks, everyone makes a mistake now and then. I know for a fact
that joe ships lots of
orders without problems, and I also know that occasionally there is a
problem. Since he is often
out selling, (he was at the Dayton Hamvention May 14,15,16,17,18) he is
sometimes hard to reach.
Since human cloning is in such controversy, he just hasn't been able to
afford one :)
Every problem that I have seen (I can count them on one hand) has been
resolved, except what's
being discussed here.

We also discussed ways to modify the biz structure so joe can concentrate on making products, and
not be out selling all the time. Some of this is underway now. Grove is distributing the Agrelo units,
and you can order from there if you like.. Same prices AFAIK.

I am still not speaking as an employee here, (fact is, I'm not an employee of agrelo) Just relating what
I see. NOBODY controls what I say.

About the only refuge for leftists in the NYC media is WBAI-FM (99.5). The rest of it is the standard corporate fare, controlled by the arms merchants and media conglomerates that own the media. Calling GE, Westinghouse, and Walt Disney "liberals" is a joke! The media are only as liberal as the corporations that control the access to the airwaves!

Message-ID: <6k6rgi$q88$1@juliana.sprynet.com>
Source record: 143188

My old 2 meter HT died recently and I decided to buy a 2m/70cm dualband HT. From my research I believe the ICOM IC-W32A is my best bet. It has all the features I want and more.

I have kept an eye on this Newsgroup for comments about the radio and I have heard only one complaint. That being that the front end will get overloaded easily if you hook up a +gain antenna in place of the one that comes with it. I also heard a ham on a local repeater with an IC-W32A complaining of excessive intermod in urban areas, and his problem was solved (or at least lessened) by using the antenna that came with the radio. I guess you could say that due to the extended receive capabilities of the radio it does a poor job of rejecting those unwanted signals.

I would appreciate any comments on the radio pro or con. And if you believe another radio is better I would appreciate knowing what it is and why you think it is better.

Thanks in advance for you comments.

With the help of a WWW site, I did the money conversion of
16000 Skr to U.S. dollars and came up with $2,056.60. That sounds much
higher than a IC-706.

Has anyone else tried the conversion?

5310. Installing HF Mobile in Toyota PU

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-23 00:00:00 UTC
From: Bart Hackemack <hackembl@ix.netcom.com>
Message-ID: <3567062D.41A1AD41@ix.netcom.com>
Source record: 143199

I am in the process of installing HF in my 1992 Toyota PU and having one heck of a time trying to elliminate ignition noise. Here's what I've done:

- Changed ignition wires using suppression cables
- Changed plugs, resister plugs were used
- Replaced distributer cap and rotor
- Bonded bumbers to frame w/grounding strap
- Bonded exhaust pipe in front and rear to frame w/grounding strap
- Bonded motor to frame by using a grounding strap to "jumper" my motor mount
- Replaced factory ground? wire from back of motor to firewall. Previously, this was a 14ga wire, well worn screwed to the firewall without removing paint.
- Grounded antenna mount directly to frame w/grounding strap
- Bonded hood to frame w/grounding strap (Removed paint under bolts too)
- Bonded block to firewall in three places w/grounding strap (Removed paint too)
- Removed paint at points the battery is grounded to the firewall
- Placed a .5 coaxial capacitor in the primary coil wire from the ignition
- Ensured the coil mount was securely grounded to the firewall by removing paint under the mount.

(Grounding straps have been built from 1" copper braid with heavy duty terminal lugs soldered to them for attaching to various auto components)

I still get ignition noise in my ic-706 when the engine is under load. If it is just idling or reving the engine with the PU at rest no problem. Accellerate under normal road conditions and the familiar pop, pop, pop of ignition noise cuts right through the noise blanker.

What experience does any have regarding successfully installing HF in Toyota PU's???

Thanks in advance for your thoughts and assistance...

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq
I can't think of anything witty to say here.
Oh well, no one is perfect.

What do you know about what is scheduled to happen
in November as regards the Brady Law?

Do you remember that back in 93 when it was being
debated it was presented as a 5 year Law that would
prevent handguns from falling into the hands of
Criminals and fade into the sunset in 98 ...???

Not so. It was in the original language that five
years after enactment that the word handgun be
replaced with firearm, and an instant background
check be conducted for the purchase of a FIREARM.

It seems that the law has been modified by various
agencies (is this legal in itself) to the point
that a National Firearm registration program will
be attempted. This does not pertain to new guns
alone as if you take in a gun for repair a background
check is supposed to be ran on you.

How do you feel about a law that was ruled, at least
in part, as un-constitutional being beefed up to suit
Clinton and his gun grabbing Corps..?

There is a bill (H.R. 2721) going around on Capitol
Hill now that would kill Brady cxompletely should it
become law. It needs help now as there are only four
signed on to it now.

If you want to help you could contact your people
in Washington urging them to sponsor H.R. 2721.

For more information and links to Your
Congressmen and Senators please visit:

You know what; what I have heard from many people that this radio has close to no intermod. (I also ownt this radio so I know from experience also) This was actually one of the main reason that I purchased this radio and I live near and travel in a very urban area... (NYC) . And about hooking up a +gain antenna I have had no problems with that also. I hook up my Larson mag mount antenna with no problems. There is only one complaint about this radio..... the voice clarity is not very good. Most people say that Im too low or not clear. I went out and bought an external mic and now its clear as a door bell. Hope I helped... maybe I have a sercret experimental model that doesnt have these problems... he he

Ok tnx Cousin Jethro. I'll buzz by your site and see if I can figure out how to post my message about Corel.

Thanks

I notice there are replies favorable towards Corel's bullshit products. Sure, there will be some who like it and and have no problems. No, not everything is bad, as the one fellow said.
That's true

I just look in the recent magazines and when writers for PC World and PC Week say Corel Suite 8 is all fucked up, then it most likely is fucked up.

But you can't look for accurate reviews in Macworld cuz they're all friggin lyars. They say EVERYING IS BEAUTIFUL. If it runs on a Mac, then it must be ok. Macworld, totally unreliable reporting. Too bad, really, cuz the Mac is a nice machine. U should try one, Jethro. I've tried your PC.

I'd rather take the word of magazine reviewers who find lots of problems with a product than an inexperienced non-professional computer ""hobbiest"".

Don't fucking mantter, man. Just look at Corel's own website, review all their bug fixes and you get the picture. Denying it don't fix it.

Nothing new here Jethro. I hear you slugging it out on the radio. It's all good entertainment. Very funny. U'r both right, both wrong.

Everybody bitches, moans, jams, pontificates.

I don't pay much attention to all the politics anymore. There are so many WHITE TRASH white people where I live, I just wish Kevin Alfred would come down here and have a look for himself. White folk need to clean up their own gargabe pile before bitching about negros and jews. That's how I look at it.

And the Christians need to examine their own dirty laundry before pontificating about all the crooks in congress, etc. Most of these politicians they bitch about are Christians. That's the pot calling the kettle black.

Christian logic is ILL-logical. A hodge-podge of confused thinking.

And Side Car Sidney needs to get himself a brain.

Ditto for KE2LO. Ditto for way too many of those turkeys on 3950. I've heard frogs burping in the night that make more sense than some of the shit I now hear on 3950.

Doesn't much matter tho. Things are going the way they will, and are not likely to change because people are greedy, and lazy, and have no idea who their enemies are. And even if they did, what would they do about it?

Uncle Vic has nothing better to do than bitch about Slick Willie. Who the hell cares who Clinton is fucking??? How wasteful can one get? If Vic did get Slick Willie impeached, would he be happy with Al da whore Gore?? No, then just more bitching to impeach Gore. Yes, a never ending spiral of nonsense.

So why get upset???????????

KJI needs a conscience, which he's never had. A few pins in his coax, too. And a muzzle for his dirty mouth. Some cobwebs in the final of his amp.

KJI, the ultimate scumbag of ham radio.

And someone ought to go drown that fucking moron AB5 Monkey Vomit character.

Oh me, 3950 never changes, does it? But if it did change, maybe no one would enjoy it anymore.

Really, who would bother tuning 3950 if everyone behaved like gentlemen?

I think maybe I'll run for mayor of Freistatt next year. If I lose, then I can try for Radio Commissioner in two years. Pass an ordinance requiring all Freistatt residents have shortwave radios that tune 3950. Next thing you know, my apartment will burn to zee ground.

cul tnx

good luck slugging it out on 50. have fun. That's what ham radio is supposed to be about. Have a little fun, whatever it takes.

NX0T

What others tell me:

Hello Burt,
It is rather tragic to see the juvinile garbage coming from the USA in many area of Internet, including the amateur sections. Reading the comments from various so-called amateurs on the amateur newsnet leaves oh so much to be desired. The garbage is all and only from the US. I just picked out you by chance to reply. I would like to inform you and all your tunnel-vision US amateurs that a greater percentage of "hams" around the world work "barefoot" - 100 watts and quite often with not much more than a dipole and/or long wire.

...Calling CQ-DX is quite common on all international HF bands. It is quite possible because of all the drivel eminating on the "ham" bands in the US, you may rarely get to hear the rest of the international amateur fraternity. Perhaps - and I would be surprised if what I am to say were not true - too many American Amateurs treat the radio hobby as CBers treat and violate the CB bands....!

It is indeed unfortunate in that too many of your compatriots fail to grasp the fact that the whole world sees (Internet) and hears (amateur radio) so much drivel originating from the USA. While there are many good and highly skilled amateurs in the US, there would appear to be a majority who are nothing much better than the worst type of CB operator. During the Second World war there was a well known saying...."When the British were bombing the Germans ducked for cover. When the Americans bombed everyone but the Germans ducked." It would seem that saying still applies today. When US operators are on the Net the rest of the world turns off. And when you are on the Amateur Bands.....! Need I say more! You have my full permission to insert all my comments on the BBS Nets used by yourself and other US amateurs.

I have received a number of personal Email complaints about off topic posts. I must admit the posters had a point. No matter how important I think not owning a gun is, it may not belong in any of the above newsgroups. I will endeavor to post only messages with a ham radio theme and that theme will be related to the conference I am posting in. Thus I doubt you will see any more posts in any group but misc. Is that better? People have a right not to deal in weighty issues if they want to get away from it all. They could be called off topic but they were not SPAMS.

Comments?

Burt

5337. FS ARRL Project Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-23 00:00:00 UTC
From: Larry Asp <larry.asp@sympatico.ca>
Message-ID: <35675AC5.21F9@sympatico.ca>
Source record: 143226

Found - ARRL Direct Conversion reciever project, (YY Special) Circa 1978
. Panel, chassis etc. from Circuit Board Specialists. This radio was
featured in QST (cant remember the issue). All there, but not working.
Clean panel, looks like fun to get going - $15.00 plus postage.

5338. FS: Preamped Icom mic for 706

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-23 00:00:00 UTC
From: Hurricane145 <Hurricane145@worldnet.att.net>
Message-ID: <6k7m40$92@bgtnsc03.worldnet.att.net>
Source record: 143227

I have a Icom IC-HM10 dynamic mobile type preamplified mic for sale
for $45 shipped. It has the up/down buttons on it. It is a great way to increase
the mic gain for an ICOM IC-706 series radio. I later found one similar mic with
tone pad on it so use it now. This will dramatically increase the audio
over the stock mic that came with the 706. I now drop the mic gain setting in
the 706 to 2 instead of running it full bore. Big difference! If interested
reply via this address or to K7MH@Juno.com
Thanks and 73, Mike K7MH in Seattle.

Honestly would prefer the NORTH Metro Atlanta area, however all others are/will be considered.

Looking for the following - Radio MUST be in excellent cosmetic condition as well as electronically.

TS-850SAT
TS-940SAT

ALL OTHER HF RIGS WILL ALSO BE CONSIDERED!!!

Also wanting it to be a COMPLETE station, would also like either the SP-31 or SP-940 for the speaker, I already have a phone patch.

Email me with your offers, READY TO PURCHASE TODAY!!

73 Daniel KC4OXP
kc4oxp@flash.net

Looking at $1000 or less for the radio - adding a few extra possibly for the speaker & other goodies that might be included.

5350. Yaesu FT-50R Problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-23 00:00:00 UTC
From: Seth Miller <seth.miller@-NOSPAM-worldnet.att.net>
Message-ID: <6k80pn$vn@bgtnsc02.worldnet.att.net>
Source record: 143239

I recently purchased a Yaesu FT-50RD and have noticed a problem when receiving broadcast FM stations in wideband FM mode (the audio is extremely distorted, as if the 'wide' filter isn't nearly wide enough...).

I have seen some references to this problem but no details. Sorry if this is a re-hash, but is this a known problem or do I have a defective unit?

Thanks -

Seth N6BMB

5351. REVIEW: SHORTWAVE RECEIVERS PAST & PRESENT 3rd Ed. Fred Osterman

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-23 00:00:00 UTC
From: mc@shore.net
Message-ID: <6k804l$g2h@northshore.shore.net>
Source record: 143240

REVIEW: Shortwave Receivers Past & Present, 3rd Edition, Fred Osterman

This guide covers communications receivers from 1945 to 1997 and details information on over 770 table-top models. The 3rd edition contains 120 more pages and 250 additional receivers than the second edition published last year so the author has found even more radios to include. The equipment it deals with are not ordinary table broadcast units but specialized pieces of equipment made for amateurs, short-wave listeners, military and government customers. Many of the older receivers are highly sought after by collectors, hobbyists and hams who are interested in "Boatanchors", a term of endearment for older, tube-based (and consequently heavy!) equipment.

Initially there is information on buying a used receiver, restoration and repair, a bibliography of periodicals, publications, clubs and on-line resources on the subject as well as an explanation on how to use the guide. Each manufacturer is given a chapter. A short discussion about the company, its logo, addresses and other general information follows. Each model is generally given a half-page with just about everything you'd want to know about the radio short of having the manual. Just some of the listings include features, specifications, circuit compliment (tubes and their function where applicable), accessories, comments, variants, where and when made, voltages, a neat symbol that indicates the type of frequency readout used, size, weight, etc. There is information of interest to collectors too, such as an estimate of rarity, new price and a general price range of current prices. The guide even has a section of radios that never were such as the Hallicrafters SX-112 and others!

Also included are the "dream" receivers - high-end equipment that most of us will never see - with names like Watkins-Johnson, Rohde & Schwarz, Harris, Racal, etc. Its nice to look at the pictures, enjoy the descriptions and dream.....

Shortwave Receivers Past & Present is very well illustrated and produced. The author really knows his receivers, choosing models that are of major interests to hobbyists. As an example of this, Osterman has included certain military receivers such as the Collins R-390/URR and its younger brother the R-390A/URR because they are of great interest to hobbyists. Also included are the sought-after Collins 'A' and 'S' line receivers. In addition, some rare and virtually unknown receivers such as the DAVCO DR-30 and the Mosley CM-1 are included. Many of the receivers listed are from other countries. Twenty four pages are devoted to Eddystone which is a well-known British manufacturer. I found the price

information pretty consistent with what I've seen on the Net and at some flea markets. A nice touch is that the author quoted a few of the radios' values in Japanese Yen as well! Japanese enthusiasts are well known at larger US hamfests for buying up nice clean Collins and other American-made radios.

This guide is a very complete collection of equipment from all over the world and should be of great interest to anyone interested in radio receiving equipment. It is available from the publisher.

5357. HELP! Lots of Radio Tubes-What to Do????

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-23 00:00:00 UTC
From: beauaa@aol.com
Message-ID: <1998052301492800.VAA22475@ladder01.news.aol.com>
Source record: 143298

FIRST of all let me say I absolutely know NOTHING about radio tubes..never the less, I recently acquired a number of them, they are new/unused, acquired from a former salesman, they were/are still packed in his original salesman's case. What I would like to know is how in the heck do I know which have any worth and which don't? Basically, I don't know what to do with these things....any suggestions will be GREATLY appreciated...naturally each tube in is its original box.

If possible please respond via e-mail as I seldom get to the boards...thanks again for any help, insight, or information you can offer...

Miss Beau
Thanks

5359. FT847/ATAS100 apartment use?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-23 00:00:00 UTC
From: kg0jn@aol.com
Message-ID: <1998052302363000.WAA23638@ladder03.news.aol.com>
Source record: 143300

Anybody try the FT-847 with the ATAS100 antenna as an in-home/apartment installation? I realize there are certain compromises, etc., but for those with severe antenna restrictions or wanting to take the rig portable (and not just in the car) this would seem to be a nice compromise...assuming it works!

How long is the antenna when full extended? (In other words, would it fit in an attic or tall garage?)

Just considering the possibilities...

73,
Eric...KG0JN

Has anyone checked or told the HAM newsgroup about this? They are really into that sort of gear and may have more answers than one would think. I ordered a small low cost unit about 10 years ago and had I not lost it in a divorce I am sure it would still be working today. It only took a few weeks to get it from the USA to Italy. Sorry I can't remember the name of the little thine, but it was simple and good to .5 degrees.

Hi. buzz buzz. A friend of mine has a pro 50 with somewhat of the same problem.
My opinion is to take out the battery pack for at least ten days. Your memory will
be lost and will need to re-program. If your radio is asleep, take a volt-ohm meter
and start at your positive-negative wires on your battery pack and look for a non-
conductive connection. Also on your battery pack, look for a bent connector. Most
of all, check your batteries with a good tester! Also, has your scanner been dropped? If so, you could have a cold solder connection. Please respond. Hope this helps! I have 25+ years in scanning. Good luck.

This is too weird. I just blew up my PRO-43 in precisely the same
manner! The backlight works, a pop is audible when the scanner is
powered up, but all CPU functions are dead. No speaker audio, no
LCD activity, etc. The most I can make of it is the AA batteries
I temporarily placed in the scanner (to replace rechargables that
had gone dead) forced too much juice up the scanner's yingyang.

Your friend wouldn't have been at the San Luis Obispo, CA train
terminal when this happened, was he? Maybe if he was, we could
pass this off as The Curse of The Amtrak Conductors Who Hate Train
Passengers Listening to Their Personal Communications. <g>

Brian

If the scanners have a CPU reset proceedure, try that first. If not,
try removing and reinstalling the lithium backup battery. And if that
doesn't work, the CPU my be fried.

5383. Getting into Amateur Radio...

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: "Ryan Faricy (& James Tonsager)" <jtonsa@worldnet.att.net>
Message-ID: <6k9s4i$p71@bgtnsc02.worldnet.att.net>
Source record: 143074

I am new to amateur radio (I am a scanner enthusiast), and would like a recommendation on some cheap but good handheld equipment.

Looking for:
- at least 440MHz
- new or recent handheld
- extended receive (need about 100-500MHz)
- Icom, Yaesu, Kenwood, Standard, Azden, Alinco, any well-known brand. (Kenwoods look cool...<g>) Would not prefer Radio Shack, unless they're good.
- DTMF capabilities.
- around $150.

Also, I've always wanted to know how DTMF works. I've heard you can make phone calls. Is this possible and how is it done? I've heard others on my scanner do this.

Lastly, is there an easy way to get a permit [without learning code] ? Should I get Radio Shack's book? (Here in Minnesota, a permit is also required to use a scanner in the car, so I can kill two birds with one stone.)

Thanks VERY much!

The TE systems amplifier has been sold.

5385. Icom T8A question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: Charles <chjoch@ix.netcom.com>
Message-ID: <01bd874c$2fc5d340$d32dd3c6@uspppchjoch>
Source record: 143076

The Icom description of the radio says, "123 memory channels with 10 scan edges"

What are scan edges ? Does this mean the memory channels can be 'grouped' into different areas (such as a group or bank for aircraft, one for police/fire, one for repeaters, etc.) Or does it mean setting a lower and upper frequency limit, and scanning everything in between ?

Is is possible to scan through the frequencies stored in memory ?

I am thinking about buying this radio, to replace both my scanner and 2 meter HT. But I have not been able to determine the specifics of how the memories may be used.

Any information appreciated.
Thanks, Charles.

5386. FS Various books and software, check it out.

I have for sale various ham related books and cd's, also some software I don't need anymore. All software includes manuals. All prices include shipping. Here is the list.

Books:
Antennas and Techniques for Low Band DXing by John Devoldere $15.
Vertical Antenna by William Orr W6SAI $10.

ARRL books and CD's
Your VHF companion $5.
Your Packet Companion $5.
Vertical Antenna Classics $10.
Radio Buyers Sourcebook vol. 1 $10
VHF/UHF Radio Buyers Sourcebook $10.
Operating Manual 5th edition $15.
1998 Radio Amateur Callbook CD $30.

Non ham related software all on CD's
Microsoft Visual J++ Professional $25.
Corel Cad version 1 $50.
Norton Utilities for Windows 95 version 2.0 $25.
Comanche 3 helicopter game $15.
Activision Spycraft $15.
Tom Clancy's SSN submarine game $15.

Please inquire by email if interested.

5397. ICOM 720 & 701 Relay Problems?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <6kaak1$e7s$1@coranto.ucs.mun.ca>
Source record: 143088

Does anyone have any info on preventive maintenance on
the band switching relays used in both the ICOM IC-720
and IC-701?

Did ICOM Release any FIX's or Updates on this Problem?
(Any mods posted in magazines would also be helpful
on both models IC-701/IC-720). Would love to read
an article on the relay failures.

Is the relays used in the 701 the same as the 720?

My last question is what is the differences between the
ICOM IC-720 and IC-720A?

BTW> I don't have the problem but would like to know
if I can do anything to prevent it to happening
to me.

I also know of the mod on the QRZ site to replace
the relay but that don't help prevent the problem.

5398. Yaesu FT-50R v. ?? For purchase and NTIA specs

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: sidmanm@apk.net
Message-ID: <6kadqj$nke@junior.apk.net>
Source record: 143089

Greetings world,

I am a newbie to Radio, so if you don't like the stupid question, at least give me credit for checking with you pros...

I am looking to buy a Yaesu FT-50R to handle 148.150 Mhz, but don't want to plunk down the cash because NTIA is going to change the band in 2006 (2008?). While I may not be in the same radio, I don't want to force myself into an upgrade if I can avoid it, especially since the radio plus mic plus cover, plus charger...it all adds up.

So, I am looking for any knowledge that specifically points to compliance for NTIA changes, as well as capable for CAP use with appropriate authorization.

If you know of a different vendor's product that fits the bill, let me know...or if you know of any good distributors that can sell that product to me...thank you very much for your time!

Cheers,

Michael

>
> please , any help appreciated....
>
> thanks ,
> Darren

The Input connector goes to the Transmitter.The Ant 1, 2, 3, connectors go to the Antenna.

To measure SWR:
1. Flip POWER/SWR switch to SWR.
2. Flip CAL/SWR switch to CAL
3. Key Transmitter.
4. Adjust CAL potentiometer to full scale deflection on the meter (CAL on the red scale)
5. Flip CAL/SWR switch to SWR
6. Read the SWR on the meter (on the Red Scale)

To Measure Power:
1. First Measure SWR as described above.
2. Flip POWER/SWR switch to POWER.
3. Flip the FWD/REF switch to FWD to measure Forward Power.
4. Flip the FWD/REF switch to REF to measure Reflected Power.

Note that you can measure these quantities with or without the Matching Network, depending upon which ANT selection is made.

5405. Icom 706 MkII HF mobile operation

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: John Timmers <john_timmers@mindlink.bc.ca>
Message-ID: <3568E01E.5F40A0BD@mindlink.bc.ca>
Source record: 143096

I just recently purchased the 706 MkII, and am in the process of installing in my pick-up. I would appreciate any ideas on what I should install, to get the best HF performance from it, while driving, etc. ie: what type of antenna, any additional amplifiers, etc.

I am contemplating an (1-60 MHz) automatic antenna tuner, with about a 9 ft long stainless steel antenna mounted to the rail of the pickup (or even the back bumper). I didn't come up with this idea myself, as I'm new to this business; this was suggested by a salesguy in a local radio shop, and it sounded the most reasonable (not necessarily the cheapest, obviously) method of getting what I want.

Would appreciate any comments or suggestions.

Dear OM,

I bought and installed the UT-106 DSP unit two weeks ago. It is not as usefull
as I hoped. The noise filter can be nice in CW, but you have to adjust it from case to case, which means that you have to switch to the DSP menu again...
The automatic notch filter can be a help in SSB, but otherwise just reduces the sound quality.

I think you can live without it. Better invest your money in a Braun HF preselector,
which improves every ham transceiver to a real 'reciever'.

> It says NOTHING about INDIVIDUALS, N O T H I N G .

Neither do the first, third, fourth. . .amendments.

In the first amendment, the right of the "people" to peacabley assemble applies to individuals and limits the power of any level of government. If the "people" are a collective such as the state, no one can assemble unless they are members of the national guard or other state sanctioned function.

Also, in the fourth amendment, the right of the "people" to be secure from unreasonable searches and seizures is an assertion of individual rights and a limit of all levels of government. Same for the other amendments comprising the bill of rights.

In the second amendment, the right of the "people" to keep and bear arms are an exception???? a collective right??? Think!

A state cannot have a RIGHT. States only have AUTHORITY granted to them by consent of the PEOPLE who have RIGHTs.

Read the federalist papers. They explain it all.

5411. dealer treatment of customers question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: jim <kw3u@warwick.net>
Message-ID: <3568828B.14CB@warwick.net>
Source record: 143102

Hi all;
Before I go off half cocked please let me pose
a question because maybe this is the normal practice
of Yeasu and their dealers.
Bought a FT-920 brand new from a big
advertiser in qst (not saying which one at this time)
and operated it 1/2 hour each nite for a week(work
conflicts with my fun) and on day off after 10 mins the
receiver died while listening to a qso and reading the
manual...called dealer and they had me call tech support.
nothing worked so told to send it back for repair((on my
nickel-no help for shipping even!)called the dealer and
asked for new replacement and no deal....called yeasu cust
support and same runaround, told no dealer would do that!!
So I am wondering if someone can enlighten me if
this is the deal for all dealers/manufacterers or did I
just get lucky. Being my first major purchase in many years
I cud kick myself for not asking what happens if rig dies
within couple hours.....tnx for ur input....

I also like the idea of the 756's more "intuitive menus" over the 870.
I do stand corrected about the transmit audio adjustment, though ;)

Message-ID: <6k96r9$lh2@bgtnsc02.worldnet.att.net>
Source record: 143130

I have a Sharp VC-C10 color camcorder to sell or trade. The camera is in good condition and has a new battery. It comes in its own carry case and is ready to use. This is the larger type camcorder that used standard VHS video tapes, not the small size tapes that need conversion.

The camera has a 9-54mm 1:1.4 auto focus zoom lens, built in mic., carry handle and carry strap. Also a swing up viewer. An adaptor is provided so you can play the tape through your TV without needing a VCR player. Very handy. Of course, you can play the scene through the view finder but not in color.

I would like to trade this for useful ham gear. I could use a small 2M HT, HF antennas, Mobile
equipment, test equipment, what have you.

Will I sell it? Sure. It is worth a hundred or so. Make an offer.

Thanks,

AL

I have a Kenwood TL-922A with 10 meters. It also has the AG6K mods so it is full QSK (quiet). The mods are fully documented. Spare 3-500Z and spare Jennings relay (the RF switching relay for QSK). Have both Operator manual and a copy of the Service manual. Prefer pickup in the New York City area, will drive some reasonable distance to meet. $1,000.

Don, I have had one for a couple of months now and I live in the
Dallas-Ft Worth metro area. I've used both the standard antenna that
comes with it and also the MFJ long duckie (model number forgotten,
but it's the one that costs $19.95).

In all cases, I've noticed no problems with intermod, either working
direct or through the repeater. However, my mobil and base rigs are
also dual-banders and run gain antennas. I've had moderate to severe
intermod problems with the mobil rig, and I suspect that if went to a
straight quarter-wave antenna, they would lessen.

The point here is that in an urban area, a gain antenna of any sort is
an invitation to intermod, regardless of the rig you are running. And
in the case of HT's or mobils, the front-ends are quite sensitive, and
thus are more prone to intermod problems.

Knowing all this, I generally always use the duckie only in town on the HT, and probably could get by just fine with a quarter wave on the mobil.

When travelling or working an event away from town, then the gain antennae are a better choice.

Hope this helps...

Hello Group:

I am interested in hearing comments/opinions about usefullness of the Yaesu service manual for a FT1000-D.

Is the manual for the FT1k-D model different than the manual for the straight FT1k model?

I have suspicion of need for calibrating master oscillator in my 1k-D radio, and wonder what the service manual states as procedure to be used and if there is external equipment needed for MO adjustment?

Thanks in advance,
73s,
Vince

I bought a Microwave Moudles LTd MMT432/28 transverter at Dayton this year. I got a small about of documentation with it. I am looking for more information about it.

1. Was this a kit or an assembled transverter when they were being sold?
2. Does anyone have any information on them?
3. Did anyone buy them out and start making them under another name?

Any assistance with this would be apprecitaed. Thanks in advance for any help that you can be.

Thanks

5436. ICOM T8 problems

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: Chris Boone <cboone@earthlink.net>
Message-ID: <356834C0.7CEA@earthlink.net>
Source record: 143147
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have found a MAJOR flaw with the ICOM T8....the battery
clip breaks ALL TOO EASILY....I lost BOTH of my batteries in 2
days...including the new BP200 I got at Dayton (and they are hard
to get!)....trouble is they use plastic in a flex area...and
the torque at that spot is more than the plastic can handle
and it breaks straight across.....(just at the top of the curve
if you look at the battery sideways!)...did it on both at the SAME spot!

I called ICOM and told them this was idiotic.....
this is a POOR design.....they should have used METAL there
as the spring NOT plastic OR made it a SLIDING clip NOT
a bending one....ICOM IS supposively sending me replacements free of
charge....BUT I cannot use my HT until then.....and what if THOSE
break????? THEN what????? I CALL on ICOM to issue a RECALL on all
batteries and replace them with a NEW and stronger design....ALSO,
change the CHARGING port to the BATTERY, NOT the HT!!! I cannot use
the wall charger unless the battery is connected to the radio...that
sucks!!!! The radio is GREAT....but ICOM sure didn't do its homework
totally on the battery system! Cmon, guys, time to fix it is NOW or else
lots of people will be pissed!!!

If you own a T8 and have had the battery clip break, I want to know...
also lets write ICOM and demand a better battery clip......(BTW I
tried glueing the clip back using SuperGlue...the glue held...until I
either put the battery in or tried to unlatch it...depending on my luck!
too much torque stress at that point for it to handle....period!)

: > scratchie fading signal. 35-45 watts will cure that.

: QUESTIONABLE advice <grin>. We don't know what's happening for this gentleman
: in his neck of the woods to be able to make that suggestion for him.

: For example, I live in a Southern california valley where i can his all I need
: to with a single watt or so to hit scores of repeaters.. I don't mean to brag
: - but I just happen to live in a very repeater-rich area. So I do not need
: "35-45 watts" to accomplish anything!

: So let's tell gary to JOIN his local Amateur radio Club - and discover what's
: happening in his area. THERE he will receive excellent advice from those
: performing the same types of communicating that he desires!

I think the point is that for general amateur operation in
a variety of conditions, the 1 or 2 watts of RF power can
be a limitation. Hams have a habit of pushing the range of
their communications. Also, keep in mind that some people actually
operate simplex and don't always rely on the good work
of the local repeater groups.

And, by the way, if you are implying that Gary is a not-very-informed,
inexperienced amateur radio operator, you are barking up the wrong antenna.

Dick Grady (grady@mdc.net) wrote:
: I've decided to buy a 2m/70cm FM handheld transceiver. Looking at the
: specs of some of the competing models, I noticed that none of the radios
: transmit on the entire 420 to 450 MHz band. The transmit range of the
: Kenwood TH-G71A and the ADI AT-600 is 430 to 450, while the Alinco DJ-G5TH
: is 438-450 and the Icom IC-W32A is 440 to 450.

: I'm trying to figure what Tx range I should insist on. I understand about
: the ARRL band plans. Repeater inputs and outputs are in the 440 to 450
: range, which is probably what Icom is targeting. But 435 to 438 is for
: satellite, and they use FM. And 432.1 to 432.3 and 432.4 to 433.0 are for
: "mixed mode and weak-signal work"; couldn't FM be a part of "mixed
: signal"? And H-Ts have weak signals.

Dick,
For most amateur operation on 70 cm FM in the US,
440 to 450 MHz will be just fine.
Some exceptions I can think of are:
- FM satellite opearation (AO-27)
- repair and maintenance of repeater links below 440 MHz
- operating in other countries that have different
band plans (Japan, for example).

Many/most of these radios can be modified to transmit down to
430 MHz. However, good amateur practice is to NOT operate
FM in the weak-signal portions of the band.

Hi Bart
You have nearly built a new car. Your problem is more likely in the 12V IC Regulator and wires going to it. This is hidden usually in the trunk area behind the walls and near the computer. This has been a problem in the Toyotas from 85 on. You can try building a metal enclosure around both the computers and the 12V IC regulator also wrap the lines with shield. Get an HT and place it near all the different devices like the wiring and the alternator, check fuel systems and the ECU. Also check to see if the noise is in the DC lines or is it RF by taking off your antenna and see if you can stiil hear it. Another good indication is do other people detect it on your transmitting signal. Some radios are more prone to this than others. Some of the Yaesu dual band mobiles fall into this category. Your attempts to repair the problem are from the old book. It was easier then to locate and eliminate ignition-charging interference. In the last decade this task has become nearly impossible.
Many cars including the Toyota use several computers and unshielded wiring. The tachometer at time seemes to make noise and also the fuel injection system. Even the individual injectors can cause it.
We asked for all this HI-Tech and now we have to fix it?

Source record: 143163

>>What is the battery life, at the 5 Watt level?

Quite a bit longer than expected, Charles. Of course, the first accessory you should buy is a replacementbattery - like a MAHA NiMH with its extra capacity. And a mAHA MH C&&& Universal Conditioner/Charger, too (which you can use on almost ANY rechargable pack...).

If you are working weekend-long events, you might like a Quantam HAM BATTERY, which is a belt-carried 2Amp rechargable pack. But I'll bet you'll be pleased with the FT-50's performance!

>>Is the audio output loud enough, to allow the radio to be used in a car?

Audio output is very good - the best I have heard in units this size.

>>And lastly, how easy is it to use?

If you have a home computer, you'll love the ADMS-1 software that will painlessly program the unit for you. In the field, programming frequencies is not difficult. You might want to write up a "cheat sheet" for the first few times, but it isn't gruesome by any means.

I'm still cleaning the shack and found some Dow Key relays. Two are 115vac
and one is a 12 vdc model. $25 each. You ship.

Need tuning knob with or without the skirt. Half moon shaft not
round shaft. What is your price? Might even take a junker KWM2A or
KWM2 as long as knobs are there, the cabinet and wiring is all intact.

Your absolutely correct, Great Radio.....Lousy Battery. You would think a design group capable of packaging a radio as complex as this could figure out the easy stuff.

Where is Maha ? Hopefully they will solve the problem with a better belt clip as well.

5458. Kenwood TM-V7A questions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: malloy@execpc.com
Message-ID: <6k9pbo$dg0@newsops.execpc.com>

I have ben thinking about getting the Kenwood TM-V7A. I would like to use it to run APRS mobile packet and monitor my local 2 meter repeater at the same time. Can this radio be listening and transmitting on one channel (144.39) while I monitor 146.91. When I want to transmit on 146.91 will it automatically switch to that channel or will it require that I do this manually. How would you compare this radio with the Yaesu Ft-8500 or FT-8100?

You can actually have a full packet QSO on one band while at the same
time having a voice (or packet) QSO on the other band.
You can at least monitor another frequency in the same band, but you
will have to manually change VFO to transmit there (you want to stop
the packet QSO as well for not to interfere). I use a button on the
microphone to change VFO.

Need several Spectra mics and speakers. Must be in good - excellent condition.

Any decent brown or black Motorola speakers are OK - I can make the Spectra cables.

Thanks,

Jim

I just bought two IC-16. One is an IC-16U and the other an IC-16H. Is there a way to modify the IC-16U to an IC-16H so they could be used together ?

Any suggestion would be greatly appreciated.

Didier

Seth:

According to Yaesu, the original design implemented a WFM, (Wide FM) filter, that wasn't wide enough. When complaints started pooring in, Yaesu claimed there wasn't enough room, physically, to install the proper filter to allow a wide enough band width to make commercial FM broadcast have good fidelity. Funny thing is... about a year later, they release a new model, that's about half the size, with an excellent WFM filter. Progress I guess.

5470. Yaesu FT-50R question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: Charles <chjoch@ix.netcom.com>
Message-ID: <01bd86c4$821a0fe0$747a5ecf@uspppchjoch>
Source record: 143251

I am considering the purchase of a FT-50R, but have a couple of questions for those of you who already own one.....

- What is the battery life, at the 5 Watt level ? (My concern is that it would be very limited, due to the small size.)
- Is the audio output loud enough, to allow the radio to be used in a car ? (With an ext antenna)
- Can the memories be stored in 'banks' , to allow grouping by 'subject', such as aircraft freqs, repeater freqs, etc ?
- And lastly, how easy is it to use ? I've had one 2 meter HT that was very easy to use, and another which required constant use of the instruction manual because the controls were less than intuitive.

Thanks for your time, Charles.

: is a re-hash, but is this a known problem or do I have a defective unit?

It's a known limitation of the 50...the "wide" mode is not wide enough for
FM BCB use-however it IS wide enough for television audio.

: Thanks -

5473. COLLECTION OF 325 NOS RADIO/TV TUBES FS!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-24 00:00:00 UTC
From: beauaa@aol.com
Message-ID: <1998052404303400.AAA20663@ladder03.news.aol.com>
Source record: 143254

COLLECTION OF 325 PLUS NOS TUBES FORSALE AS A LOT!,

I posted a note last evening requesting insight and help regarding a collection of radio/tv tubes which I had acquired, and which I knew NOTHING about. ❍As I shared in my note last evening, I was out of town and my husband who knows no more about tubes than I do, bought these while I was gone thinking I could do something with them! At the moment neither of us knowS exactly what he thought I should do with them, as we are antique dealers who handle European antique furniture, and these tubes aren❍t something we know or have a market for❍❍this will teach me to leave my husband alone again!!!! J

I was amazed at the number of kind, helpful folks who e-mailed with information and suggestions, and who helped me decide what to do with this "collection," I had acquired and want to dispose of.

I understand, from some of the helpful gentlemen who wrote today, that these tubes are know as NOS, that is they are new in their boxes. They are also in a professional carrying case. I have counted and re-counted the collection, and there are approximately 325 plus tubes. The following is the list of tubes in the case. A picture of the tubes and the case can be seen at:

http://www.snowhill.com/~beau/tubes.jpg

The following is a list of the collection of tubes. I want to sell the whole "collection" as a lot, with the case. If you are interested, I am open to offers, which can be sent to me via e-mail.

The following is the list of tubes in the case❍.there may be some typo❍s, but since none of this means anything to me, (that is none of it represents anything in my experience) it is impossible to proof the list. IF there is some specific number you need clarified, please let me know. Thanks.

For one an inanimate object can not be responsible for anything as it can
not do anything by itself. Second point: if you can not think of more
efficient ways of dispatching a large group of people, you are far less
intelligent than the average criminal that , on average , have IQ ratings
in the double digit category.

And, just why can't they do so? The tracking is from depot to depot, so it
is UPS or FedEx equipment that does the tracking.

battery life is great. esp if you get a 1400ma

Sorry the memories are not in banks. You may lock out individual mems. but this is not much fun to go back through and unlock them. This bums me out..

The audio is really good. Not as good as my couple of htx-202's. Almost as loud but not quite as smooth.

It gets easier to use when you realize that there are different functions for each key according to how you touch it. tapping a key is different then pressing for a bit less than 1 second.

There is a dtmf memory that will hold around 70 characters and will allow you to scan codes off the air and view them. A bit different than some decoders on ht's I think.

I do really like my ft-50r. I can listen to it in the shower. Rain or shine. sand etc... this radio still looks brand new after a year.
The ft50r does have it's quirks but I really wouldn't trade it.

I had the same problem. What cured it was a really good ground from the
base of the antenna to the engine block/frame mount, and also one to a
radiator bolt. I used the shielding off some RG8 coax. Clean all the
paint off really, really well. Have you put a capacitor across the
fuel pump? Leave the pre-amp off. If you need the pre-amp to hear
them, they probably won't hear you anyways.

Good luck :)

I have an Icom 900a for sale. It includes the high power 2 meter and 440 band units. It is in perfect working condition. I rebuilt the display unit two years ago and replaced both the clear plexiglass window and the luminescent display pad. I purchased it new and all manuals are included. It also includes the auxiliary cooling fan.

It is on display (consignment) at Mikes Electronics in Ft. Lauderdale, Florida. The telephone number there is 954-491-7110. Please ask for Mike or Walt. It can be purchased with a credit card. I hope this method eases the concern associated with the sale of used equipment without a face to face meeting. Also, please feel free to contact me.

Does anyone have a VX-10 ?

I have a 50R. The VX-10 looks just like it, might even be the same radio.

I am wondering what software I need to program it. Can I use the same as the 50R ?

Thanks

Dave

I'd like to add that for the car, a decent investment it to get the clip-on speaker mic. I leave the radio down on the console and clip the mic onto my shirt or the seatbelt shoulder strap in the middle of my chest.

Unfortunately, it doesn't support banks. Just 100 channels (plus 4 or 5 upper/lower limit channels for limit searches).
I get by using the skip feature to only scan the channels I happen to be interested in at the moment. It is a slight nuicance when compared to a true scanner with banks but I've been getting by fine now that I'm used to it.

You could stretch the use of the adms software by keeping frequencies grouped into subject within different downloadable rdf files. But then doing a bank switch requires plugging into your computer and downloading. That's quite a stretch and not feasible in most cases. Selective skipping would work better.

Most of the basic functions are pretty easy to use with one read-through and some practice. Then after getting used to the radio for awhile, I went back and re-read some of the more advanced paging features and such. Haven't memorized them yet but haven't had a call for them in over a year.

Inasmuch as the original poster mentioned UHF as his "bad of choice" I would suggest that he get involved with his local repeater associations - I don't know a one that can't use the $$ 8). Since he is from So Cal he should have no trouble finding a decent wide coverage repeater (like Mt. Wilson..)

ARES / RACES / SkyWarn are always looking for members (don't know what SkyWarn does on Calif...)

Try that! Just getting on the air and making the call is a tough way to go on UHF..

I agree .. and may I suggest you get a earbud & microphone setup like Radio Shack's 19-315?
That way you will not have to hold your HT to use ... makes for a muck easier package.

I've just bought A U16 and I'm trying to use it with a GP300 at a frequency of 462,5000 Mhz. I can receive with U16 but I don't receive anything on GP300 altough the red light turns on. I've programed the frequency on U16 but it looks that I'll have to do more than that. What is encoder and decoder tones about ? Will I need offset ? Help !!

Second question:

I'd like to have the frequencies used on a IC-M12 (VHF). What frequency is used by A,B,C,...I, WX, 6, 16 ?

Any kind of help would be highly appreciated.

I purchased my AT-600HT after looking at a lot of HTs for a long time. I use this radio exclusively for my ARES and SkyWarn and as a backup for my public service work. No ... it is not a Kenwood or an ICOM ... but I didn't spend that kind of money to get it either.

A few comments...
1. The audio is weak, but I usually use an earbud with this radio
2. The manual is a riddle in places, but I have managed to get all functions to work
3. The customer service is superior - I have never been placed on hold and forgotten and my questions have been answered

In the Bang / Buck division I feel this radio is a superior buy.

5514. Re: Yaesu FT-50R

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-25 00:00:00 UTC
From: Philip Rosenberg-Watt <philip@dim.com>
Message-ID: <BKma1.124$8D.5309131@wormhole.dimensional.com>
Source record: 142995

How long is the battery life, at 5 Watts? As small as the rig is, it
>would seem the talk-time would be much shorter than that of a full size HT,
>due to the smaller battery.

The standard Yaesu 5W NiCad battery that comes with the rig is rated 9.6V,
600mAh. I use a MAHA NiMH battery rated 900mAh.

>- Are the memories arranged in 'banks'? Can you set up some for aircraft,
>some for ham repeaters, etc, without having to scan through all 112
>memories ?

No "scanner-type memory banks" on this rig. However, you can opt to skip a
mamory channel in scan mode. Remember, though, ths primary function of theis
device is that of a 2-way, not a purely listening device.

Also, 100 of the memory channels are scanable; Ten are for Upper/Lower
frequency range scan limits, and two are for "home" frequencies for each of
the two TX bands.

>- How substantial is the audio ? Is it loud enough to hear inside a car,
>etc?

Although this is the only HT I've ever owned (so far), the audio is
excellent. I've read many reviews where the audio is constantly rated
top-notch. It is very lous and easy to hear in a car, but that depends on
how loud your CAR is. Audio is nothing to worry about.

>- And lastly, how easy the FT-50R to actually use. I've had one HT that
>was very easy to use, and another with required constant use of the
>instruction manual because the controls were not very intuitive.

As a declared "gizmo man," I am easily adaptable to various electronic
devices' interfaces. However, after no more than two days (again, this is
very subjective), I did not need to refer to the manual to activate 100% of
the functions I *needed* to use. I do not use DTMF paging (yet), so I
naturally do not need to know how to use it. But I believe that the controls
are a good balance between total user-ease and fitting all those functions
into something so compact.

To answer your question, since I have nothing to compare the FT-50 to, I
would say... more difficult than programming my (not your) VCR, but easier
than using WordPerfect 5.1 for DOS.

By the way, I sold my Radio Shack scanner to help pay for this rig. Although
it does not have banks, you can program the memory channels differently with
the ADMS software kit from Yaesu (I recommend it to any FT-50 owner). One
file for police, one for fire, or however you want to organize them. I

realize this is not a very practical way to select listening frequencies, and if you don't have a laptop to carry with your HT all the time it is rather impractical, but it is *possible*.

>Thanks for you time. Charles

My pleasure.

5516. What's the deal with the ICF7600 AC pwr supply?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-25 00:00:00 UTC
From: eljefeNOSPAM@halcyon.com
Message-ID: <3569f63b.93898247@news2.halcyon.com>
Source record: 142997

I've got a Sony ICF-7600g. Went looking for an AC power supply/adapter (AC E-60M Sony part#). The guys at Radio Shack, who've pretty much got an after-market adapter for anything, say they can't get one for the 7600g. Since it's only 6v, and the jack slot looks standard, I can't figure out why it should be a rare OEM item. (Or for that matter, where to get an OEM adapter.) Anybody have a line on this?

Also, has anyone used either the AN-1 or AN-102 MW antenna for the 7600g? I primarily DX medium wave, and would be interested in first hand reviews of these.

Thanks.

Bart:

I purchased my 706MKII the first week of February, it took a little over eight weeks to from the time I sent my registration card til I got my seperation cable. I have heard from others that said they got their cables in as little as 2 weeks. I think the coupon for the cable says it will take 4-6 weeks. I received my DSP unit on April 15th. Hang in there, they will arrive.

Once again the media (and other foolish types) blame an object for a crime rather than the PERSON who committed it. If the courts in this country would lock up (permanently) or execute all violent criminals the FIRST time they commit a violent crime then maybe teenagers these days would see that crime doesn't pay. And maybe parents these days should expect some responsibility from their children at a younger age instead of letting them run around like wild animals. By the time I was 13 I knew darn well what was right and what was wrong and that my parents would hold me fully responsible for my actions. Today many kids have nothing expected from them until they meet the real world and by then it is too late.

OK, How about clarifying "The Law"? Is it illegal to own a cell capable scanner, or is it illegal to *use* it? Is it illegal to own a cell modified pro-2006, or to use it? Is it legal to modify a scanner to make it cell capable? Is it illegal to publish *how-to* ifo. on modifying scanners to make them cell capable?

HELP IC-746 OWNERS!!!

Do any of you have problems with ALC with your rig? Whether it's FM phone or CW on 40m, my ALC is always WAAAAAY out of the brackets. The manual is just not helpful.

Have any of you run in to a similar situation? If so, how have you solved it.

My IC-746 is a GREAT rig, but this ALC problem concerns me. I don't know enough about ALC, and am wondering if this problem is actually damaging my rig in some way.

73, and hope to hear from YOU soon.

Tod, N9ZWY

Hi, well I want help you all to get into a good club to build a good group of friends. Look at the ARRL site for clubs in your area. Do'nt stop with the first club if the members are not interested in adding a member. As the Present of the local club here in Fairfield Calif. We encourage all to get involved, we have a monthly meeting where we help newcomers with their radio's and a weekly breakfast to get all together. We also train for licenses. 1/2 of our members are Technicians. So I hope you all who are meeting the bad guys of our hobby can find good friends to enjoy the hobby with. 73 Dar K6USW
P.S. Also check out the local RACES or ARES group since they aways need new volunteers.
I know this as a fact since I am the local ARES DEC and RACES Director.

Well, there's a broad question! For the price of some 300 ohm twinlead, a piece of coax and a connector you can make a J-pole. I regularly work a repeater at least 25 miles away with my 2.5 watt HT. I hang it from a pin in the door frame next to my desk. For just a little more money, you can get some 5/32 or 1/8 brass rod and a piece of sheet brass from the local hobby shop and build a ground plane. I have about $12 and a couple of hours in it. I'm waiting for the next club meeting to borrow a VHF/UHF SWR meter to tune it up. I built it long so I can cut it down to size. Remember, "measure twice, cut once." The plans are in "Now You're Talking." Hey, measure and cut a wire dipole. There are a multitude of ways to exfoliate a feline.

I have built both antenna types you refer to, and I find the J pole works a greater distance, but the 1/4 wave ground plane gets out of a canyon or depression much better. I also found the J Pole to have a much flatter SWR curve. I would now like to find plans for a much higher gain type like a collinear.

Try Ten-Tec. I purchased their 2m to 6m transverter kit several months ago
and it works great! I am currently letting a friend use it with a Yaesu
FT-290RII, and a few nights ago during a good band opening he made a
half-dozen or so 800-1000 mile contacts, one with a station in the Bahamas
(this from NW Louisiana). Not bad for a 7watt rig! The kit is $96 and the
assembled unit is about $170 or so.

Their web site is: http://www.tentec.com/

Their phone is 1-800-833-7373. Give em a look.

5538. Bad Microphones on Kenwood Blue faces

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-25 00:00:00 UTC
From: Larry KJ7YM <kj7ym@bigfoot.com>
Message-ID: <6kdhuj$706$1@news.goodnet.com>
Source record: 143019

I have two Kenwood blueface radios (TM-V7A's), and they both have serious microphone problems. At first I thought that it was just real bad luck on my part, but there is a rather tight group of friends of mine that also own TMV7A's at least 9 radios of this type are owned amongst us, and virtualy all of us are experiancing mike failures, mostly intermittent inability to key up. One of mine went out permanently untill fixed by a friend of mine in a nieghboring town. This fix however has not lasted. One of my really good friends, Kieth KC7KC (Go see his page on remote controlling of this radio) has also had one of his fail permenantly like, and it is now at the warranty station.

Any way the mike has a few other problems that Kenwood will warranty on the mike brand new. All you have to do is buy your brand new radio and then send it right off to a warranty station and they will fix it right up. But the one in question now is this loss of ability to key up.

If any one else has or is experiancing this, and especially if you have an answer for it, would you please share it with the rest of us? When my friend gets his back from the warranty shop, if they will tell us exactly what was wrong with it I will then share it as well.

If any of you are like me, you probably also really dislike buying a brand new radio, just to have to ship it right off for warranty repairs and there are enough possibilities with this radio for this with out adding anouther to the list.

I am hoping it will be something simple we can all do at home.

So, please share your experiances with us. Thanks, Larry

Thanks for that, Joe. I too regret that it has come to newsgroups postings. I didn't intend on posting at all, but when I saw Tracy's post, then I really got worried, and added my bit.
You have to admit that you could have been more informative, if this was the cause of the delays (restructuting and so on...) - I can understand this, anyone can go through changes that affect operations.
But the fact that you either didn't reply to email or phone calls, and that when you did it was to say it was going to be sent 'this week for sure' took a toll on my patience, and when the credit card charge came and I couldn't reach you for four weeks, then I got REALLY worried.
It was also unfortunate that your homepage dissapeared for a while, so then contact was completely lost, wich added to my worries.

All I can say now is that I apologize for any damage caused to your reputation, and that PLEASE keep your costumers informed of the truth and progress of their orders - even when something is your fault, or when you have so many orders that you can't handle them all.

My best regards,

Mike

From: Loek Dhont <a0927429@dlemail.itg.ti.com>
Message-ID: <01bd87e1$51b8d160$0a23a8c0@A0927429.itg.ti.com>
Source record: 143028
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

FS: Rockwell/Collins KWM-380 in pristine condition, mid-serial number.

This unit is like new, factory condition, with only one minor paint scratch
on the right side of the case. Front panel and rest of the radio is like
new, no dings, scratches or rubmarks . All printed text and marks are
clear, no "erase-effects" from cleaning solvents or finger rubbing.
Also internally the radio is pristine, no rust, oxides or other blemishes.
Radio is a "non-smoker".

Installed options:

- Kiron memory board version M3-A (also called "red-dot" version)
- 1.7 kHz narrow-sideband filter, Collins P/N 622-2441-001
- 360 Hz CW filter, Collins P/N 642-2439-001
- 6.0 kHz AM xtal filter , Collins P/N 642-2442-001
- Keyboard control interface, Collins P/N 641-7150-001

Additional accesories:

- Desk-top microphone SM-280, Collins P/N 020-0261-010
- Pipo keyboard (boxed incl cable) for direct-entry of frequency and memory
channel
- Collins service manual, original version, not a copy
- Collins owner's manual, original
- Kiron memory board manual

Service bulletins (manuals & parts):

-Service Bulletin #15
-Service bullentin #12
-Service bullentin #18
-Service Information Letter 1-84
-Service Information Letter 2-84
- 913-5019-560

The SB's and Information letters are not installed as I always wanted to
keep the radio in factory condition. The KWM-380 works fine without them
anyway.

Price: $3200.- plus shipping.

5548. Bird Model 4311-200

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-25 00:00:00 UTC
From: tgold@microvest.demon.co.uk
Message-ID: <896104469snz@microvest.demon.co.uk>
Source record: 143029

I've got a Bird 4311-200, apparently vintage 1975. It's similar is appearance to Model 43 but it's able to perform peak measurements. In addition to the normal model 43 components the case also encloses a pcb, a couple of switches (peak read and battery test) and two batteries. The unit is not working although the line section, the element, the cabling and the movement are all fine.

The batteries appear to be two piles of coin sized NiCd cells stacked and wrapped, and I count them (5 and 10 cells) to be 6v and 12v respectively. They're wired in series with the join grounded, so it looks like the pcb uses +12v and -6v respectively, and they are charged together, so I presume they use an 18v charger.

Can anyone confirm that these are the correct batteries and voltages for this instrument? Maybe the coins are not NiCd and I've gotten the voltages all wrong.

The batteries are labeled Varta, but I don't see any model number visible anywhere.

BTW there is also a small component wired directly across the meter movement. Anyone got any ideas on what this is?

Thanks for any clues.

Regards,

Yves, I think the photo is authentic -- just poor quality. I saw two prototypes at the Dayton Hamvention... it's real. The unit is about 2/3 the height of an IC-706 and about the same width. Wish I had taken a snapshot of the rig to add to my Web site (see --> http://www.en.com/users/rayd/ft-847).

5550. Looking for help with a Maritime SSB antenna system

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-25 00:00:00 UTC
From: Scott Beers <sbeers@mediaone.net>
Message-ID: <6kbvgk$b9k$1@ndnws01.ne.highway1.com>
Source record: 143031
Cross-posted to: rec.boats,rec.boats.electronics,rec.ham-radio.swap,rec.radio.amateur.equipment

Hi all,
I have a 26' Wellcraft 260 AFTCABIN (sportcruiser, no antenna arch). I just traded for a SEA 222 SSB radio and automatic antenna tuner. Now that I have it and looked at it closely, I realize that I should have asked the previous owner a bit more about an antenna setup. The radio has a SO239 50 ohm connector on it. The auto tuner has a SO239 input...now here comes the part I want input on. The output is 2 insulated studs...one goes to ground and the other goes to the ...longwire antenna or similar. My question is: What if I want to connect a 50 ohm SSB vertical antenna with a SO239 on it. do I just plug a PL 259 into the antenna and then split open the coax running the center to one stud and the braid to the grounding stud (the studs are about 12" apart on opposite ends of the box) or is there a better way?
Thanks all
P.S. Hi Clint if you see this maybe you can help

Well, I called UPS and FedEx here in Spain, and said "Could you tell me if there has been ANY shipments in the last
month from postcode A to Barcelona in Spain" and both said "No."
It can be done. They won't be able to tell you if there is a parcel for YOU, but they can tell you if the sender has sent
either NONE or SOME parcels in the last few days. Specially when the sender company has an account with them :)

5555. SWAN 270 Afficionados?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-25 00:00:00 UTC
From: Major Fred Mooney <fmooney@sprintmail.com>
Message-ID: <35698AE9.78FC@sprintmail.com>
Source record: 143036

Greetings.

I have a SWAN Cygnet 270 that works great for CW, and marginally with the microphone. I can't align it because the balanced mixer, and the transistor oscillator feeding it are not wired as in the schematic diagram. I'm wondering if it was customized by a previous owner, or if SWAN shipped them with mods undocumented in the 1970 manual. Anyone know this transceiver well enough to comment?

After reading this, I can only suggest that you (and others like yourself) make an effort to join a local amateur radio club or association. If you are having problems finding one, just go a retail store which sells ham-radios, etc. and ask them if they are familiar with any in your area.

You talk about using the radio to meet new friends, but its generally the other way around, I would think; first you go to the club to meet people, then cultivate these friendships through use of the radio. Get involved in club projects, club nets, etc to become more familiar with an expanding knowledge of the hobby.

I became a licensed radio operator with very little knowledge of radios, propagation, antennas, etc, but have become more knowedgeable through the methods described above (who says you can't teach an old dog new

tricks...)

Cross-posted to: rec.radio.swap,rec.radio.amateur.swap,rec.radio.amateur.equipment,rec.radio.amateur.antenna;

We will be moving soon, and unless a ham buys the house, will have a variety of antennas and towers for sale.

All are located in NE Ohio, with pickup being preferred.

The following are available.

Hy-Gain "Hy-Tower" Vertical - This is the full size vertical that is about 55 feet tall, with about 25 feet of actual tower on a tilt over base. $150

Cushcraft A-147-22 two meter beam - pair of stacked 11 element antennas with phasing harness, etc. $ 100

65 feet of very heavy duty Riverview tower. This tower is rated to hold 14 square feet of antenna, with no guying required. Obviously, it will hold much more if guyed. $ 450

You can also get all of these antennas, and much more, by buying the entire house, located on one of the highest locations in Stark County. E-Mail to W8EK@usa.net, or call (330) 499-7388, for more details.

Cars deaths are accidental. I don't remember hearing of a kid steering a car into a crowd of students. You have no point. Shooting someone with intent to kill is not an accident. Kids grow up with a fasination of guns. TV, the news, and gun lovin' parents are likely at fault. The NRA say's that education is the key. Gosh I think these kids already know how to shoot.

Enough said, our society has no real use for guns regardless what you say. They kill, thats what they were made to do and thats what they're being used for.

Sir,

I am a member of the K7PP Repeater Group in Washington State. We provide communications on the 147.200 MHz + 443.400 MHz from 80+ miles into Canada north to Portland, OR south. Through out Washington State into Northern Idaho and parts of Montana. We have Satellite links with Hawaii and provide auto-patch for the Seattle area and with over 100 police/fire/resque/U.S. Coast Guard dispatchers in Western Washington.

Our repeater system would go away with the passing of RM-9267. At present, we have a web page devoted to getting the word out. Take a look at "http://www.halcyon.com/wb7vlv/newsdesk.html". If you can help get the word out, please feel free to contact us (George Miller WB7VLV) with any questions and add a link to our site.

I received one of the first T8 radios available in my area and immediately put it into hard service. It accompanies me everywhere - hiking, running, cycling and so on. My battery has been on and off the radio dozens of times with no problems. The battery performs well and fits the radio very securely.

Aside from the original antenna I have found the T8 to be an exceptional performer. It has outperformed the many Icoms I owned in past and it has exceeded my highest expectations.

Perhaps Icom had a bad series of batteries in a more recent production run?

As an aside - did the clips break while the batteries were being taken on or off the radio or did they break while the radio was being worn on a belt clip?

Good luck with your replacements.

Hi,
Another newbie question. If I got a portable (leaning towards the Yupi 7100), Will an outdoor antenna always have benefits only, or can it "overpower" the reciever? I'm thinking for now any of the Radio Shack antennas like the discone or the smaller ones.

Thanks!

Bob

4800,N,8,2 is the CAT standard and it's fixed, at least it has been in
every Yeasu box I've seen.

Unfortunately, from what I hear Los Angeles is a worst-case place to
be getting into ham radio..

I have not encountered any profanity here in the Nashville area, nor
on any of my other travels. (but I've never taken a VHF rig to the
West Coast) The lack of anyone to talk to, however, is real. I do
make some occasional QSOs on 146.52 simplex (most of which are quite
pleasant and interesting).

I agree with the VE7; joining a club and getting to know some people
that way would be very helpful. (unfortunately not an option in my
case as I work weird hours & can't attend club meetings..)

I would also consider looking at some used 6m SSB gear. You're always
welcome in a 6-meter short-skip opening, and you'll work some
distances that will leave the 2-meter gang green with envy..

If you have a 300-watt pager transmitter down the
street from you, sure....an external antenna could
pipe in enough signal to overload the front end
and cause all sorts of havoc and consternation.

Much depends on the quality of the design of the
receiver, though. Some are susceptible to overload
and some are not. I don't know about the Yupiteru
and no one else does, either, because technical
data, including schematics, aren't available.

You have to go on someone's word....a most suspicious
aspect, really. And, of course, the Yupiteru radios
are illegal to import into the USA. This is said as
a matter of fact, just so's you know.

Back years ago, people brought in illegal "export"
CB radios by the droves. With impunity. Then all
of a sudden the FCC and US Customs cracked down and
people's heads rolled all over the place.

Something to keep in mind when opening and wantonly
discussing illegal contraband in these open, public
newsgroups where the gendarmes can read, same as you
and me. If you are going to do something, just do
it....but to talk about illegal activities in an
open forum isn't one of the best of your options.

IMHO.

I'll second Kevin's idea. Even though I can't believe that this type of
tragedy would happen, I wouldn't wish it on anybody...not even Butt...I
mean Burt. My best friend was shot and killed in a drive-by shooting two
years ago. I will NEVER forget the moment when I was told what had
happened. Maybe this isn't the right place to talk about this, but maybe
Butt...I mean Burt, should get a life, and realize that this COULD actually
happen to him. What would he say then?? Would he still ridicule the
world??? I'm not saying I'd want it to happen to him, but maybe he needs
to clean the pre-mordial ooze out of his eyes and his one brain cell and
take a look @ the world.

E.F. Johnson Viking Challenger Transmitter and Morse code key
with Johnson manual. Price reduction--$125 or best reasonable
offer plus shipping.

Some nice folks advised me that this unit does not have the
original Johnson stock meter setup, but was upgraded by the owner
at one time from examining the meters in the photo.

Photo at:

http://www.geocities.com/Athens/Forum/3417/VIKING.JPG

The unit's power cords, etc. need replacing due to the old rubber
insulation cracking. Could not be plugged in for this reason.

Purchased off the son of the gentleman who bought it brand new.
This unit was represented to me by this gentleman's son as
probably being in good cond, but he did not remember his father
using it for quite a while. His point was that it probably ran
the last time his father used it many years ago.

Will consider $125 or best reasonable offer plus shipping.

Thanks.

Grid-Dip Meter made by James Millen Mfg. Co. Inc., Malden, MA.,
U.S.A. Model Number 90651. Price reduction to $175 or best
reasonable offer.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GRID-DIP.JPG

This unit cannot be told from new and is in amazing condition.
It even has the original box with it. One lucky person
apparently sold a unit for $325 in this super condition and I
have seen them for $65 as well in decent condition.

Price reduction. Understandably, was not moving at higher price
so reduced price to $175 or B.R.O. plus shipping due to the
wonderful condition of this unit.

Thanks.

5589. FS: Two Nice Hammerlunds

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-25 00:00:00 UTC
From: Karlan@juno.com
Message-ID: <6kckec$rg5$1@nnrp1.dejanews.com>
Source record: 143070

TWO NICE HAMMARLUNDS FOR SALE:

HQ-140-X (no speaker)

HQ-170 with matching Hammarlund Speaker (original owner).

Both units are in extremely nice shape for units this old. Of course there's some minor scratches and the like, but these would be considered extremely well kept and collector quality. Plus both units were owned by people who were not smokers, thus the meters and dials are pure white and not yellowed as one usually would expect with old boatanchors.

Photos:

HQ-140-x:

http://www.geocities.com/Athens/Forum/3417/HQ-140-1.JPG

Purchased off the gentleman directly who owned it.
He is retiring and wishes to reduce his collection. He stated that the unit was recently gone over and is in super operating condition. $250 or b/o plus shipping costs. Will consider a good condition & complete Hickok USN or USAF AN/118B cardmatic for a swap for the 140-X.

HQ-170 & Matching Hammarlund Speaker:

Have taken all sides so you can see the condition.

http://www.geocities.com/Athens/Forum/3417/HQ-170-1.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-2.JPG
http://www.geocities.com/Athens/Forum/3417/HQ-170-3.JPG

Purchased off the son of the gentleman who bought it brand new. The unit was represented to me by this gentleman's son as being in good cond., because that's the way his father was. The son said it was operating fine before he removed it from his father's home. Said he and his brother were listening to the Dodger's game. I am not an expert at this type of radios, but know well what they are. The only things I can see is that one of the light bulbs that illuminated one of the dials needs to be replaced and the fine vernier adjustment will need a dial string (a.k.a. some folks use dental floss). Since neither this gentleman's son, nor I are experts at the use of these radios that is all I can say and you can see the condition yourself.

HQ-170 & Matching speaker $400 or b/o plus shipping. I realize
both prices are on the high side, but these unit's physical
condition are really nice.

Thanks.

From: rbritt@visi.net
Message-ID: <3568cc10.1571614@news.visi.net>
Source record: 143108

I have a Atlas 210 which I use mobile and the noise blanker wont cut down on power line or alternator whine. Is this noise blanker effective with this type of noise? If so, any hints on how to adjust it? When I go mobile on 40 meters I hear every noisy power line on the side of the road. Thanks for your help.

73 Richard W4MCD

rbritt@visi.net

Please reply via email directly to the address above or I probably wont see the reply. Thanks.

5598. **WANTED** Good working 2 meter mobile rig. Prefer Radio Shack, or Yaesu.

I have a Standard C168A 2.5watt 2 meter HT that I will trade with
200 memory channels and a Standard Lapel/ear bud mic for it. I am
interested in a good 2 meter mobile rig that I can mount in my truck. If you
may be interested then E-Mail me and I'll get back to you with more info. The
HT is only 3 months old. I need more power mobile. Thanks...

I was talking to a couple running a booth at Dayton. They are
from Oregon and sell bags and other goods (like holsters) at
hamfests and gun shows. They were so used to west coast hams
that are very liberal and very anti gun.

They were very surprised that midwest hams are conservative and
usually carry guns. I would guess that the third of the folks
at Dayton had a weapon on them. My guess is that different types
of folks get into amateur radio depending on the area. Midwest
liberals just are not interested in technology.

Think carefully before sinking too much money into this hobby. I am
also a new ham and I am starting to feel that maybe I made a mistake.
As soon as I got my license I spent several hundred dollars on a top
of the line HT and accessories and after 3 months of daily attempts
have not found anyone to talk to. I don't know if people in other
parts of the country have had the same experience or if it is just the
city I live in (Los Angeles). All the requests for contacts I have
made on the air either go unanswered or are met with rudeness or
profanity. More experienced hams I meet seem very resentful that
someone new is trying to "horn in" on "their" hobby. I took a beginner
class and read everything I find on ham radio and I am learning but
not having a technical background it is a slow process. As far as

asking other hams for help forget that. Whenever I ask someone about something I don't understand, such as what a particular function on a radio does, they all have the same response that they repeat word for word like a broken record: "if you don't know what it is then you don't need it". I would recommend that you try and get a few friends to study for the license with you so that you know you will have people to talk to before you lay out any serious money on equipment. I listen to a lot of traffic on the air in my area and the only things I have ever heard were people who already know each other having private conversations on pre-arranged times and frequencies. I thought I would be using my radio to meet people and make new friends but I know now I was pretty naive. I hope your experience turns out better than mine. I'm not blaming anyone but myself. Maybe I should have learned more about the field before investing so much money but in any case, it was a very expensive mistake.

5609. New Yaesu Mini Mobile HF RIG. FT-100 (Jpeg attached) 1/1

>
>Looks pretty cool.
>[A MIME image / jpeg part was included here.]
>

This photo looks like a forgery.

The display appears to come from the Icom IC706, the main tuning control
and buttons to the right from the Yaesu FT-2500 and the rest from bits
of other radios. The picture quality is also rather suspicious.

I think the picture has originated from Yaesu as a UK dealer has also
used same in a mailout. However, it would be interesting to see if the
FT-100 really does look like it when it is introduced. I do hope Yaesu
do not cut any corners as far as the receiver is concerned. As we move
towards the sun-spot cycle peak, a good receiver will be needed to sort
out signals.

Source record: 143121

They are NOT comparable, at least in the sense you mean.

TM-V7A is a true dual band, VxV, UxU, VxU,UxV transceiver.
The TMG707 is not. It is either tx on VHF rx on VHF or tx on UHF rx on UHF at anyone time. ie no monitoring you local 70cms repeater while tx'ing on 2m.
Think of handhelds such as the IC32 or IC24 etc etc and that is essentially what the TM-G707 is.
TM-G707 is not the rig for you if you want to receive in VHF both bands at the same time, as you say in your posting.(and for that matter, neither is the IC207H).
Good luck!

Look at the ISOTRON by Bilal Co. (1-719-687-0650) Ask for there catalogue.

They make a good antenna for a low price. I use them, they work great. A 20 Meter Antenna is only 21" long X 8" wide X 4" tall,,,,,,,,,,, there 40 Meter is 15" deep X 16" wide X 22" high. Try to beat this for size.

Ryan,
Reading all the above may tend to give you a pretty bleak out look on ham radio. If all you want is to talk to other hams on vhf, id say your interest will die off in a matter of weeks.However , there are so many areas of things to do in ham radio , you dont always need someone else who is a good ham to keep you interested,,although it helps. Go ahead and get the no-code , but dont be surprised if your disappointed.Use it as a starting place for things to follow.I find that Im doing things I never before was interested in. I have problems myself. Like when I built an atv setup. Come to find out, no-one in range really gave a hoot about it. I had no-one to exchange video with, so now I enjoy flying my rc airplane by video. Dont need anyone to have fun! This is just one for-instance , there are many others. So dont ever give up, the license is definately worth getting! 73,Doug N0WVA

The Radio Shack HTX-202 2m-only rig, manufactured by ICOM for RS, is
reputed to be bomb-proof.

> - DTMF capabilities.
> - around $150.

At that price point you will probably need to visit local ham radio
swap fests to find a used unit.

> Also, I've always wanted to know how DTMF works. I've heard you can make
> phone calls. Is this possible and how is it done? I've heard others on
> my scanner do this.

A local repeater will usually be equipped with a "phone patch", a
piece of hardware in the repeater controller which decodes DTMF codes
as numbers and dials the phone. The repeater controller then acts as
a hardware interface between the repeater's receiver (to which you
transmit with your HT) and the phone line. Likewise, the repeater's
controller takes the audio from the phone line and transmits it over
the radio waves so you can hear the other party's speech on your HT's
receiver.

> Lastly, is there an easy way to get a permit [without learning code] ?

Yes. The lowest grade of amateur radio (ham) license is a Technican
class license. This license requires no Morse code.

> Should I get Radio Shack's book?

Radio Shack sells a re-branded copy of the ARRL's "Now You're Talking"
book, which is IMHO far and away the best book for a beginner who
wants to get the no-code Technician license. The book takes you
through all the material you will need to know for the written test,
and contains the complete set of questions in the test pool, along

with the answers.

Your local public library may also have copies of the "Now You're Talking" book, as many amateur radio clubs make it a point to donate copies of all the license upgrade books to the local libraries

>Using two stop bits instead of one just increases the inter-character
>time during transmit.

True.

>I don't think it affects receive - the UARTS
>I've looked at should only need the first stop bit to end the character.

However, many simple devices do not use an UART, but instead use a
software loop to wait for the first stop bit. Some time is required
for processing of the assembled character before the next character
starts. I have seen one device that definitely required two stop bits
on 1200 bit/s and did not get a single message correct with only one
stop bit. Even with two stop bits from a fast computer, I had to add
some intercharacter delay for completely reliable operation.

>So a computer set for N/8/1 should talk to a radio set for N/8/2.

It is always safe to have the _receiver_ at one stop bit (if the
receiver supports it) and the transmitter at two stop bits. This just
extends the mark time between the end of the last data bit before the
start bit of the next character.

This is problematic situation if there is a duplex link, since I have
never heard of split-stopbit (1/2) UARTS :-)

Looking at blowing that tax return on a new toy, and I would
like to get a 2m HT. I have been looking and the Icom and Kenwood
units fit my price range and my feature set, so I was looking for
experience and comments on either.

The Icom IC T2A or the Kenwood TH 235A are the two options
I've been looking at and any comments are welcome. Please email me
with the comments. I have looked on DejaNews for both subjects, and
while there is a lot of discussion about the mic modificatino for the
IC, there is zilch for hits on the TH...

Thanks in advance...

Lloyd,
You may find the best results are obtained on the higher hf frequencies (up to 40m) by using a wire snaked around the ceiling and fed with a tuner. Make sure the wire is insulated. If you have rf problems you might try another wire running along baseboard and using this for a ground. I have used this and it has worked good. Make the wires as long as possible. You may also want to look into loops. I read an arcticle I think in 73 mag. about a loop strung around the ceiling and fed with some kind of matching device. Cant remember the issue. 73, Doug

5640. Re: Bad Microphones on Kenwood Blue faces

Hi Don, and thanks for sharing this with us, actually the hot mike problem is yet another of the little tidbits that Kenwood will warranty at zero mileage on our radios. This is something that really should be done if you plan to crossband or remote control. I have not had any problems with that problem myself because I remove my microphone before use.

A question though, has the mic held up very long since repair and did the repair center give any clues? Yhanks again Don for your reply, Larry and the Gang.

Subject: Re: Microphone problems with Kenwoods Blueface.

Hi Larry,
I also own a TM V7A but have not experienced this problem YET.
A friend of mine bought one a couple months ago and had your problem.
I think Kenwood called it hot mike, not sure though could be one of the other problems this radio has.
Anyway he sent his off to kenwood and was fixed and is now working fine.
I know Burghardts in Watertown S.D. are familiar with this problem.

5642. FS: Collins TCS-12 complete setup for sale

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-26 00:00:00 UTC
From: kr4wmNOSPAM@bigfoot.com
Message-ID: <MPG.fd540a3d499c2639896c7@news.infoave.net>
Source record: 142854

Here's your chance to own a piece of Collins history! I have a Collins TCS-12 Navy set (transmitter and receiver) that I need to have removed from my shack. It just takes up more room than I have to spare. I've gone through it with a fine-tooth comb, and the receiver is in great working order. It is speckled on the front like something got spilled on it sometime in the past, but the control labelling is not damaged. I rate it a 7 1/2 or 8 out of 10. The transmitter looks as-new, I rate it as a strong 8 1/2 or 9. Of course it has some age dings. Anything this old will. The inside almost sparkles! A box of spare tubes, two power supplies (small and large) remote control box, and (rare?) hand mike are included. One cable is new, I removed the inventory tag myself. The other cable is in good condition. Transmitter and receiver both have shock mounts. Noise blanker has been installed. I have not had the transmitter on the air (tubes still in the boxes I got them in).

I have the complete original military shop manual and a copy, and instructions on conversion to 50 ohm coax.

I had a set like this when I was a teenager, and couldn't resist it when this one came available. I drove from South Carolina to Maryland to pick it up! It sure is nice, but just doesn't fit into my miniscule shack. So- Best offer over $225 takes this one home. Pickup only, unless you're prepared to pay for professional packing/shipping services. Web Williams in Myrtle Beach, SC

NO, I will not copy the paperwork for you. I will forward your request to the next owner, however.

REMOVE NOSPAM in e-mail address to reply

Shipping zip code: 29577
Shipping weight: about 260 pounds
(85 pounds TX and RX, heavy power supply is about 100 pounds, small power supply about 75 pounds.)

5643. FS: Kenwood twins (R-599/T-599 with speaker)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-26 00:00:00 UTC
From: kr4wm@bigfoot.com
Message-ID: <MPG.fd5410e4746cb149896c8@news.infoave.net>
Source record: 142855

This set is in perfect working condition, and includes the Kenwood external speaker. I have the original boxes and manuals. Although the cabinets are clean, some lettering has been worn off the front of both units, but can easily be replaced with rub-on lettering. The receiver is missing one of the lock-down buttons on the hinged lid. I've only owned them for a couple of months, but just found something else I want more (Kenwood TS-940). Will sell for $325 for the set. Will include non-amplified D-104 for $25 more, or a Kenwood MC-50 for $60 more.

Will consider a trade of a Yaesu equivalent mike for the MC-50 that will go with my recently acquired Yaesu FT-101ZD (will not separate mic. from the Twins unless they sell without it.)

No, I will not make copies of the manuals, but I will forward your request to the next owner.

Double-box packaging is included in the sale price, however, shipping is not.

ZIP CODE: 29577
WEIGHT: about 50 pounds, three boxes.

Look up your shipping costs at http://www.ups.com

They do include schematic, and everything else you'd need to service a 706.
Actually, service manuals we sell are the same manuals we at Icom use to
service radios. Where did you get yours? Was it used?

Deviation probably needs to be aligned. You can't do it without test equipment and special extender cables to remote the modules while the radio is working.

If you wish to email me, please remove the letters "cq" from the start
of my email. (I put the letters "cq" so that the automatic email SPAM
programs will get the wrong address.) :-)

Dear Ken,

Before you write off Ham Radio as an expensive mistake, I hope you'll
try a different approach to the hobby. The 2 meter FM Band (using
repeaters) in Los Angeles isn't at all like the HF Bands where one
can call CQ CQ CQ ... Here are some tips and ideas for new Hams in
the Big Cities:

(1) SEEK OUT A HAM RADIO CLUB: You may need to look at several clubs
before you find the ideal club for you. Different clubs have a
different feel to them. Just remember, the LA area is full of clubs,
visiting the clubs will expose you to lots of different people. Here's
the URL for the club I belong to:

http://home.earthlink.net/~pcc_csm/SBARC.html

If our club is too far from where you live, check out the ARRL WEB
pages for a club near you:

http://www.arrl.org/field/club/clubsearch.phtml

(2) NETS ARE A GREAT WAY TO MEET OTHERS: For a new Ham, it's
tough, you'd like to talk to others, but you don't know anyone and no
one know who your are. Nets are a great way to "meet" others. I'm
no expert on Nets in the LA area, but I do know of a few:

Wednesday 147.195, + offset, pl=100Hz, I think it starts at 8 or 9 PM
Thursday 145.320, - offset, pl=114.8, Starts at about 6:30 PM
Thursday 145.320, - offset, pl=114.8, Starts at about 9 PM

There are a lot of Nets every week; however unless you search the different
repeaters at the hour and half hour times (when people are home from work),
you may not know which are out there. Try to consider your search like
a hunt; make it like a game to see how many Nets you can find. You may
want to keep a log of what you find. The most inportant rule is, always
listen before you jump in. That way you'll know if the Net is open or
closed to newcomers. In addition, you'll know what the context of the
Net is about. In most cases, the person doing Net Control will ask if
there is anyone out there who would like to join the Net.

Some Nets are small and that gives everyone several chances to talk. Others are very large and you may get only one chance to talk for 30 seconds. The Wednesday Net, listed above is ideal for saying a bit, listening to others and coming back again. The Thursday Net at 6:30 PM allows you one shot to say something at the time you check in. The Thursday Net at 9 PM is great if you want to play a trivia game. If you know your stuff, you have several chances to speak.

Remember, some clubs may not run their Nets every week.

(3) PLEASE DON'T TRY TO REACH OTHERS BY CALLING CQ CQ CQ ON VHF/UHF: We're just not that formal on VHF/UHF. In general I would say, "This is KF6JHG listening." That works great where there are others out there who know me, but when I first got on the air, that didn't work. It's funny, but many Hams are shy. One trick is to come on the air and say, "I'm testing to see if I'm reaching this repeater OK, this is <call sign>, could someone please give me a signal report." You can get a brief conversation out of it if someone answers, but I wouldn't use this trick too many times. Least everyone starts to think that your hobby is just testing radios. <smile> By the way, if someone says, "This is <call sign> listening." That's a good chance to give him or her a call, "<call sign> this is <your call sign>, the name here is Ken ..." You may need to listen for a while, but few Hams will ignore a response like that.

(4) HOW YOU SAY IT IS AS IMPORTANT AS WHAT YOU SAY: If the tone in your voice hints of anger, frustration, or just seems pushy, people will not want to respond. I'm not saying you are doing this, but I've heard new Hams come on the air with that sort of tone. It's very important to relax and smile when you talk. Try to project a friendly sound to your voice on the air.

(5) THE WORLD IS FULL OF JERKS, DON'T LET THEM BUG YOU: Nice people outnumber the Bozos. However it's the stupid Bozos that we seem to remember. Life is short, just try to ignore the jerks and seek out the nicer people.

(6) I LIVE IN THE LA AREA: If you want to test you rig on the air or just talk, email me. The "CQ" at the start of my email address is there to trip up all the spammers. You'll need to remove the "CQ" from the address to reach me. If I knew the general area of LA you live in, I could select a repeater that you could reach without problems. You may be able to reach the 2 repeaters I listed above. Some nights I'm busy and can't go on the air, but many nights I'm free to talk. Drop me an email and we could arrange something.

73,
Bob
KF6JHG

>HEREï¿½S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR
>HARD EARNED MONEY)

This is about the biggest bunch of drivel I have ever read.

Everyone does NOT have the massive resources of Microsoft and Microsoft simply doesn't admit to having any errors (even to the United States Congress under oath).

I would much prefer a list of errors... and fixes... that can be downloaded from a web site (no matter how difficult it might be for me) than denial that there even is a problem. The only people that have ever sent ME notification of bugs in their software is Intuit... and they have a financial interest in not making errors in the tax returns they generate.

I have never heard from Microsoft or even IBM... but I check both sites.

If you want to see a list of errors, check out IBM's for OS/2 Warp 4 (for instance). It makes this sniveling list of 41? fixes look like the program maintenance guys aren't even working at Corel.

By the way "J." which gave you the biggest problem in the list of errors, the German "esset" or the French "acute" accent? Did the title change in 3.5.2 really improve your productivity (or at least get you out of a work stoppage). Which tables that you couldn't import before did they add with their enhancement (not fix) that really got you out of a hole. Of course, if you are editing long blocks of Japanese characters, those constant crashes must be annoying (I personally never encountered that problem with MS Word, but I don't think it handles Japanese... I know I don't).

You can save yourself a LOT of money, by waiting until perfect, thoroughly debugged software is available... you'll never need a computer.

On the other hand, if you want to lease code at multi $1000s a month, I KNOW IBM gives you far more personalized and direct support.

In the meantime, beware Microsoft, they may not even tell you of a known bug.

Ron

Along the same lines below, but slightly different application, has
anyone tried to download .RDF files from the ADMS-1D software to
program the Yaesu FT-50RD by using a simple battery-powered EPROM
circuit instead of the RS-232 cable and laptop?

I would be interested in building such a device.

Note: my email address is chris.cavigioli@analog.com, not the one above.

>Bill Smith - n2asa

I agree with the previous two replies. I am happy with my FT-50RD and
the speaker/mic is a life saver in mobile operation. The sound quality is
surprisingly good through the speaker/mic too.

However, the FT-50RD does not have the programmable channel banks originally
asked about. instead you upload/download new memory definitions from your
laptop. This is fine .. if you have your laptop with you. I agrree that
it would be nice to have some other method without laptop ... for example
with small plug-in smart cards which you could pre-program from a laptop
and then carry in your pocket to use outside .. on the spot. But this
doesn't exist.

Get the FT-50RD anyhow ... it's pretty good.

Oh yeah, I also dislike that the keypad isn't illuminated. It's a pain
in the butt at nighttime. Too bad Yaesu don'e sell an aftermarket
keypad with lights to retrofit the current models. I'd buy one.

P.S. note my correct email address is: chris.cavigioli@analog.com, not the
"from" address above. 73s de WB1FBZ

5658. Icom IC-746 Mod!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-26 00:00:00 UTC
From: Craig Spada <craigs24@worldnet.att.net>
Message-ID: <6kekvl$1vg@bgtnsc03.worldnet.att.net>
Source record: 142881

Hi Folks,
I just bought a IC-746 and finally found the mod to open up the receive and transmit!!.
I received this mod from a friend which he applied it and it works!!, but be careful, I take no responsability, also this mod appears to work on all I have spoken to, but there might be a problem, rumor has it that there are different version of firmware (a.k.a. software in the radio).
Good Luck here it is:
Open the radio and cut the following diodes (you can find where the diodes are located in the manual on the diagram).

Locate diodes D1717 and D1714 cut one side of these diodes
the D1717 is for the expanded receive and D1714 is for expanded transmit.
after cutting the diodes do a full reset press the F-INP and M-CL together with the power-on

Have fun, I would like to know how this works out, I am trying to figure out if there are different version of software.

Please email with your findings craigs24@worldnet.att.net

Take Care,

Craig WA2TWF

I have one. It was not all that expensive $30(?) but I also
found it to be next to useless. It had some alignment data
and a few other odds and ends but it doesn't hold a candle
to the service manual for my FT-990, which is > 200 pages
while the IC-706 is less than 50 and doesn't even include
a complete schematic as I remember, just a block diagram.

I�ve had the same problems with my Microphones that goes with both of my TM-733�s, looks the same, I�ll bet it is the same. I've had to repair all 3 of my Kenwoods microphone PTT switches. One of them being a TM-261A, but same microphone, the newer one. The switches still clicked/ but didn�t work. Kenwood repaired the first one, under warranty, I did the other two. These are the newer style back light DTMF, I found a replacement from Digi-Key. Digi-Key Part number SW408-ND, this is 150g force. If you like a lighter feel, then I would go with ... Digi-Key Part number SW407-ND, this is 100g force. These are made by Omron, minimum life is 300,000 cycles, and drop right in place, perfect fit. Should last a little while, cost...45cents. I have over a year, since I replaced them, still not a problem one. I desoldered them without taking the boards apart. Also on mine the lock switch on the back kept getting switched accidentally, so I removed the plastic top of the switch, easily done, and covered the hole with a thin piece of hard black plastic. Didn�t use it, and it was frustrating to go to use the mic and couldn�t change channels.

They do have a minimum order
Digi-Key # 800-344-4539
I hope this helps,
Zac... KF6ATH

>> for a good price. Most places I've seen on the net want $60+
>> for a single battery, and that is just completely outrageous.

No, Dan - what is really outrageous these days is the original manufacturers offering us original equipment NiCad packs at the same price - or MORE - than 3rd party vendors offering NiMH packs!

Personally, sixty bucks for a quality-cell NiMH pack is quite a deal these days. NiMH offers sometimes 60% greater capacity than the NiCad packs - in the SAME SIZE battery pack!

The Nicad Lady in Southern California offers excellent products, unbeatable customer service, and good prices. She will also take your existing battery pack and fill it with high-capacity NiMH cells:

http://ggfx.com/nicad/index.htm

The best charger I've seen is the MAHA MH C777a Universal Conditioner/Charger for about fifty bucks. Wish it was available three years ago! It replaces all your other chargers. It automatically recognizes NiMH and NiCad packs. A lot more features - the best thing about it is that there are no additional costs involved - no "cups" or anything to buy for differing battery packs.

From: perkins@nome.net
Message-ID: <6keu6c$96l$1@nnrp1.dejanews.com>
Source record: 142896

I have an Icom Ic-W2a HT that is modulating poorly. People receiving my signal are complaining of my being "far away...down in the mud..." This is a used radio belonging to a friend, and I would like to know if there is anything I am doing wrong. I have the manual, but find nothing relavent. Another question: Can the UHF/VHF bands be swapped right-to-left? In the normal mode, when transmitting on one frequency while listening on another, severe howling takes place. Without turning down the volume on the one band, is there anyway to stop this? Also, why is it that when a shift is installed to talk and receive on a uhf band only, that I have to put the radio in duplex mode to get the shift? Is this normal for this radio? My Alinco is not like this...

Comments would be appreciated...

There is another ham posting on this newsgroup who uses a FT-1000D with a perfectly built 40 meters antenna and he can't get the auto tuner to tune this antenna on the whole band. That should give you an idea about the quality of the Yaesu auto tuners. As for myself, I use Kenwood equipment and my auto tuner can even tune a 80 meters dipole on 40 meters with no problem whatsoever. This kind of makes you wonder. Icom equipment is also very good at tuning antennas. Maybe Yaesu engineers never got the hang of designing an auto tuner..

[Ryan's original questions never really got answered, what with the
negative comments about the hobby, hamming in big cities, cost etc].

Ryan, I'm glad you are looking into a ham radio license, and hope
you have as much fun with the hobby as I have had since getting my
own license about 1-1/2 years ago.

Recommendations on specific equipment are difficult, partly because
I don't know many rigs myself and partly because there is a lot of
personal taste involved in choosing a radio. Wait until you know a
bit more about amateur radio before you spend your money. (see below)

If you don't want to learn Morse code, a Technician license is what
you want. Probably almost half the hams now are Techs. I suggest you
make contact with hams in your area, if possible, and start to
work towards your license. With luck, a radio club in your area will
be holding classes. Ask about clubs in local radio/electronic stores,
or contact the ARRL: http://www.arrl.org to ask about clubs and ham
radio classes.

If you can't find a ham class in your area, then yes, I suggest you
buy 'Now You're Talking' at a Radio Shack, and start studying it.
Also, look for sample tests on the web. The best sites let you take a
test and then grade it immediately. Try:

http://w5ac.tamu.edu/ham-exam-v2/ham-exam.html

You also may be able to get a program that runs on your own PC and
gives you mock-tests. Check out the QRZ software repository:

http://www.qrz.com/files/index.html

Finally, contact the ARRL to find out a testing site near you. Try their web site: http://www.arrl.org for starters.

Once you are licensed (or close to getting it, anyway), head for your local ham radio club and ask to see members' HTs. I am sure they will be willing to extoll the virtues of whatever they are carrying. With some luck, you may find someone willing to tell you what's *wrong* with their gear, as well! In lieu of a radio club, head for your local public library and start reading the equipment reviews. Dual-band handhelds have been reviewed at least twice in the last year or so. Many readers of this list will strongly advise you to buy a mobile radio instead of an HT, and for good reasons (not repeated here), but consider whether you will be operating from more than one car, or on foot or bicycle. I prefer an HT.

As for phone calls, you may be able to place local calls using a repeater. Radio clubs often install an "autopatch" (the device that connects a radio to the phone line) on their repeater. You key in a DTMF activation code to turn on the autopatch, then key the telephone number to call. Usually use of an autopatch is limited to club members.

Good luck, and I hope to hear you on the air sometime. Don't let the negative comments of others dissuade you. Most amateurs I know are friendly, albeit shy and sometimes reluctant to answer a CQ call.

Hi the name is Lloyd, I have a sinclair model Q-202 duplexer for sale, and I am
asking $425 in Canadian funds, for those of you in the USA, that is about $277
in your money. This unit was hamified, by a pile of would be ham tech's, you
know the type, big mouth knows everything about everything, has no test equipment
only a hammer and screw drive, and will fix anything anywhere. Well this
got fixed !!

So what is the problem with it? Well some super tech's redesign the phaseing harnness
as they know more then any real engineer dose, right ? So here is the deal, I have
tested each can on my HP network analyzer and each can checks out OK with about
.4 to .5 dB of loss per can. So all it really needs is a new harness, and a REAL tech
with REAL test equipment to set it up and tune it. The $425 includes shipping as long
as it is not over $35, anything above that and you will have to pick up the extra.
I can be reached at my shop at {604} 990-4130 or by email at novatech@mail.direct.ca
And last of all NO would-be ham tech's that think all you need is a hammer and screw
driver to fix anything. Or any hams that think, gee if my FT-890 puts out 100 watts
with 12 volts DC input, what would it put out on 220 volts AC. And if you think I am
trying to be funny, you should have been here to see the rig that, that was done to in real
life !!! No joke, I had a FT-890 on my bench that was pluged into a 40 Amp stove
plug ! Now that took some real brains, or the lack of.

.

You can try E.H. Yost company at http://www.mrnicd-ehyostco.com/.
This gets you to home page but none of the URL's seem to work.
Don't know about their prices (good/bad). I generally look for vendors
at local hamfests and learn to open the plastic cases so they can be
glued, taped, or clamped back together. Works if your patient.

From: "Christopher R. Crabtree" <dckidd@clark.net>
Message-ID: <356B2872.7092@clark.net>
Source record: 142907

I have an Alinco DJ-560T that has quit transmitting audio. It
seems to be transmitting the carrier on both bands, but no audio from the
built in mic or external mics. No DTMF tones can be heard on the receive
side, either. I've taken it apart to look for any 'obvious' problems and
everything looks okay. It has been modified for out of band reception
and has worked for several years since the mods. Can anybody help before
I have to send it in and then decide to buy a new one anyway?
Thanks for any help.

>
>Read the federalist papers. They explain it all.

Our "RIGHTS" come from God and given by him to "The People" in the USA
who in turn "loan" to our government what is needed to manage our
nation. In European and Socialist countries they believe that the
"rights" (power) comes from God and go to the King (or government) who
then loans those rights to the people (their subjects). This concept
is what makes the USA so unique.

5686. FS: AEA HF remote

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-26 00:00:00 UTC
From: NE7X <NE7X@amsat.org>
Message-ID: <356AFEFB.13F@amsat.org>
Source record: 142909

Have a busy lifestyle? Need to make a schedule and can't be home
to make it? Out with the family and don't want to miss the HF swap net?
Need to work that DXpedition before they go QRT and your working late at
the office?

Well don't miss a single QSO with the HamLink HL-80 telephone remote
controller by AEA! This is a commercially manufactured product by the
now defunked AEA Corporation. This is not a kit or a homebrew unit.

HamLink allows you to fully operate and control your home HF station,
including antenna rotors and amplifiers, from any telephone in the
world! Even operate your HF station from a cellular telephone when stuck
in rush hour traffic, or a cordless 49 MHz telephone from anywhere in
the house or yard!

Operate all modes, SSB, FM and even CW! With the use of the OpLink
remote and the built in TiCK CW keyer, you can even operate CW up to
speeds of 40 WPM from any telephone!

Just plug in the HamLink HF remote controller into any telephone line,
the radio's mic, spk, cw key jacks, and the radio's computer data port
(for freq and mode control, supports ICOM/Kenwood/Yaesu), and away you
go.

All commands are given by the telephone's DTMF key pad. QSY up/down the
band, change modes and key the transmitter. The unit even has a voice
synthesizer to tell you what mode and frequency your transceiver is
currently set to.

The unit is FULLY passcode protected to allow ONLY those individuals in
who you want to have acess to the remote.

This is a GREAT solution for individuals who live with CCR restrictions
and can't put up antennas. These individuals can create a ham club at
another location, then dial into the remote from their home and work the
rare ones!

Total below package: $175 + $10 UPS ground shipping ($185 total)

AEA HL-80 HamLink telephone remote (original cost $285)
5.0 firmware upgrade (Original cost $15)
AEA OpLink remote interface (original cost $99)
Built in TiCK electronic CW keyer (original cost $22)
DTMF key pad (original cost $39)
Both HamLink & OpLink user and programmer manuals

Payment will be a cashiers check to me sent to my callbook address.

For "serious" buyers ONLY! Send me a valid convincing eMAIL request
and I will eMAIL you the telephone number and passcode to test the
remote out LIVE from your own telephone.

Tom, NE7X...

From: delano@PROBLEM_WITH_INEWS_GATEWAY_FILE
Message-ID: <6kf1mc$gjm@fcnews.fc.hp.com>
Source record: 142911

My T8 came disconnected from the battery while the battery was clipped to my belt. It fell to the ground - it still works fine! I am concerned about this happening again. I would feel more at ease if the radio were attached to the belt clip and the battery were attached to radio. At least the radio would be spared.

One more interesting thing, about the battery (BP200), is upon arrival the battery pack was all open and the batteries were not secure. I had a friend use super-glue to to keep it closed.

One final thought is, that the user battery pack holds only 3 AA batteries. I have seen the inside of the BP200 and there are enough cell there to provide 9.6V. The user battery back should be an empty BP200 case or something like that.

Using two stop bits instead of one just increases the inter-character
time during transmit. I don't think it affects receive - the UARTS
I've looked at should only need the first stop bit to end the character.

So a computer set for N/8/1 should talk to a radio set for N/8/2.

Dave

Source record: 142923

I own am FT-50 and have had it for about 9 months, I am very pleased with
it.
I usually get 8 to 10 hours of battery life with probably 1.5 hours of full
power talk time in there.
the audio is loud buy if you are using in an auto with an an external
antennae go ahead and plug in a mic and speaker unless you have a quiet car
it is just easier.
you can group memories but it does not divide them in to banks(something I
wish it did)
the basic functions are fairly easy to learn and ember but unless you use
some of the others you'll want to remeber where you kept the manual or
reference card.
I am happy with my FT-50 there are a couple of things I wish it did though.
full duplex receive, bank scan, and dual VFO's for same time monitor and
scan.
If you get one R&L sells a very nice hard leather case for it with police
type belt loop www.randl.com 30.00 plus shipping
73 and happy shopping

Too weak. I say good thing about AT-600
(http://www.radiotelephone.net/amateur/at600.htm) but the audio is
not something you want to get it from this HT. You cannot
technically hear anything in the busy streets. I also realize that
the tone of the audio is too high.

>2. The manual is a riddle in places, but I have managed to get all functions
>to work

this HT has lots of features that you don't see with same $$.

>3. The customer service is superior - I have never been placed on hold and
>forgotten and my questions have been answered

seems ADI released PC programmable software. it's nice if they
provide it with AT-600 in near future.

I have a VERY nice Midland 13-513 220MHz transceiver for sale or trade. Rig runs 1W/5W/25W output (front panel selectable), is synthesized with standard +/- repeater offsets and covers 220-225 MHz. Excellent condition with Microphone. Am looking for a 2M Yagi with Rotor, 10M or 6M FM rig but am open to any attractive offers. Make an offer.

>"overpower" the reciever? I'm thinking for now any of the Radio Shack
>antennas like the discone or the smaller ones.

I use a PRO-2003, a PRO-2004 and two PRO-2006 scanners. I get adequate results when I use the telescoping whips, but I've found that ANY antenna is better than those! The 2006's each have a set of $19 K Mart rabbit ears. I've heard 30 MHz skip on both of them as well as 2x 15 MHz shortwave images. The PRO-2004 uses a Radio Shack all-band mobile whip, the one with the two loading coils. The PRO-2003 has one of those funky RCA jacks in the back, and it uses a broken down mobile whip. At times it seems somewhat more sensitive than the 2006, which sits on top. The 2004 and other 2006 are at a different location.

For mobile use, I have a PRO-51 handheld. Attaching any external antenna other than the rubber ducky sometimes causes overload if I'm in the city. Using the Radio Shack mobile from above, I was able to hear the local dog catcher on 158 MHz at a distance of about 65 miles. The local police on a 453 MHz repeater system were heard out to about 50 miles or so.

If you've got the room, by all means, put up an external antenna. I have sometimes used a magnetic mount mobile antenna hung upside down with the base clamped to the top metal frame of the window.

RACES and ARES activity take place entirely within the amateur band, so no mods are necessary. CAP and MARS activity is just outside the ham band, and may require a mod. That mod involves removing a very small, surface-mount diode from the main circuit board. I have a posting on it, but have never tried the mod myself. If you want a copy of the posting I have, send me e-mail (remove the "xx" in my reply address).

Actually, when in my truck, I use either my headset or the full size
handheld microphone and the RS amplified external speaker.

My preference does dip towards the headset though as my truck is
standard and talking with a handheld mike while shifting is a bit of a
pain.

(Now some people out there are gonna say "get a mobile!", trust me I'd
love to, but I cannot afford one, so I do my best with what I have).

I believe Mr. Cheek is in error. The restriction on cellular capable or easily modified to be capable scanners only addressed those units manufactured or imported for sale. Thus the scanners would not in themselves be illegal nor would importing or building one for one's personal use be illegal. This distinction might be lost on a Customs person but if you read the act I think you will find it is true. OTOH using you scanner in a manner contrary to the ECPA is illegal unless of course you are a democrat.

5724. IC-T8A Broken Battery Clip!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-26 00:00:00 UTC
From: eric_fre@hotmail.com
Message-ID: <6kdeip$5e4$1@nnrp1.dejanews.com>
Source record: 142947

Mine broke the second time I took the battery off I had it not even 1/2 hr. I
purchased a new one and told them I want a complete refund when I send the old
one back because with out the battery it is useless. I didn't pay $500 not to
have a radio for a month!! by the way that was 6 weeks ago and I am still
waiting for the battery! Just imagine how long I would be with out a radio.
By the way the design is sound if the right plastic is used and the shape is
tapered to relieve the stress from one point!
I had an Icom M1 and it broke as well!!
They really need to get their act together.
At the moment the whole lot is being held together with the soft case!

Apart from that great radio!.

I recommend to every body that has one of these do not remove the battery if
it is on the radio at risk of brakeage!!

Cheers
ERIC.

Grandfather clauses don't outlaw cell capable
scanners before April, 1994. I can't interpret
the law for after....... You'd need a lawyer.

> Is it illegal to own a cell modified pro-2006,

It sure would seem not. It's "grandfathered"....

> or to use it?

Use what? The cell capability? Yes, that's illegal.
Since 1986, no less.......

> Is it legal to modify a scanner to make it cell capable?

Apparently not for private owners. The FCC has said they
were coming after commercial concerns that did it, but not
individuals.

> Is it illegal to publish *how-to* ifo. on modifying scanners to
> make them cell capable?

You can publish information on how to make atom bombs.
Information, so far, has few if any legal constraints.

Not a joke!!!With a 1x1 call you would think he would know how to hook up
coax to a freakin' tuner....ever heard the word LID???

I cannot really speak about the 870, but I have owned the 756 since
March and I am liking this radio more with each passing day. In terms
of "bang for the buc", I think you would be hard pressed to beat it.

5730. Needed: Mic for HTX-100

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-26 00:00:00 UTC
From: Joe Denison <mjd@ntr.net>
Message-ID: <356A4C83.D01B7374@ntr.net>
Source record: 142953

First, my apologies if I already posted this here.

Second, I need to find someone who has or knows where I can find out what the part number is on the mic element inside this mic (I think I might have burned it up when I soldered the wire back on it last night). If that isn't available, could someone tell me where I could find a mic that will work with this radio that doesn't cost as much as the replacement from RS ($42.97 + s&h). Could someone tell me if I can use a standard electret condenser mic element to replace the one I think I smoked. And as if this isn't enough to ask, could someone tell me what the pin-outs are on the mic input. I may have to rig something up to work with it. The documents available from RS are not very helpful and I don't have the service manual. If someone has the specs on this, please let me know. I want to play on 10m. I didn't learn the code for nothing.

Thanks and 73,

Joe Denison

>Does the rig come with software to run on my computer (& any
>necessary interfaces other than the garden variety rs232 cable) or do I
need to
>buy the software/interface seperately?

Extracted from Yaesu FT-847 Manual :
"...Yaesu Musen does not produce CAT /Computer Aided Transceiver/ System
operating
software, due to the wide variety of personal computers, operating systems,
and applications
in use today."

"You will need a serial cable for connection to the (RS-232C) COM port of
your computer."

There is also section that " will allow the programmer to undertand the
command structure and
opcodes used in the FT-847's CAT System ".

That's it.
Hope your stisfied with the answer.

5735. FT920: Use of AM filter on CW?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-26 00:00:00 UTC
From: Henk Remijn <hremijn@zeelandnet.nl>
Message-ID: <6ke37cccf1@news.zeelandnet.nl>
Source record: 142958

I like to use the AM filter position of the 920 for CW. In this way I can use
the 400Hz filter as default and a 250Hz in the narrow posiotion.

What Ive seen from the schematic these could be done with the internal
software. Maybe there is a hardware solution as well.

Any tips?

73, Henk PA3EOB (at PI4ZLD during WPX CW)

> be getting into ham radio..

Well, you'll get that in most big cities... certainly London, even a little bit Down Under in Sydney, Australia...

Part of the problem is a large concentration of people, and the ready availability of rigs from unscrupulous (or ignorant) dealers.

Another part is the ease of operation - the average 2m FM rig is no more difficult to operate than a CB. Try HF sideband or CW - your average ratbag isn't smart enough to operate a clarifier (much less a key :-) so you get much less of that kind of behaviour.

I have for sale various ham related books and cd's, also some software I don't need anymore. All software includes manuals. All prices include shipping. Here is the list.

Books:
Antennas and Techniques for Low Band DXing by John Devoldere $15.
Vertical Antennas by William Orr W6SAI $10.

ARRL books and CD's
Your VHF companion $5.
Your Packet Companion $5.
Vertical Antenna Classics $10.
Radio Buyers Sourcebook vol. 1 $10
VHF/UHF Radio Buyers Sourcebook $10.
Operating Manual 5th edition $15.
1998 Radio Amateur Callbook on CD $30.

Non ham related software all on CD's
Microsoft Visual J++ Professional $25.
Corel Cad version 1 $50.
Norton Utilities for Windows 95 version 2.0 $25.
Comanche 3 helicopter game $15.
Activision Spycraft $15.
Tom Clancy's SSN submarine game $15.

Please inquire by email if interested.

Attention Fellow Computer Enthusiast:

***** C O M P U T E R S O F T W A R E F R A U D A L E R T *****

%%%%%%%%%% C O R E L S O F T W A R E E X P O S E D %%%%%%%%%%

HERE'S A TIP TO HELP YOU AVOID SOME FUTURE GRIEF (AND SAVE SOME OF YOUR HARD EARNED MONEY)

PC World Magazine, in their February issue made reference to a particular software title as

'THE SOFTWARE FROM HELL'.

I've never used the product they were referring to, so I can't comment about it.

Nevertheless, if PC World had been talking about software from

COREL CORPORATION (Word Perfect, etc), it would have been MOST APPROPRIATE.

COREL SOFTWARE PRODUCTS, IN ALL THEIR FORMS, TRULY DESERVE THE TITLE

****** S O F T W A R E F R O M H E L L ******

because they are buggy (and dysfunctional) beyond belief. Corel products make Microsoft look like the knight in shinning armor, even including Windoze 95.

YOU CAN'T READ INFO LIKE THIS IN THE COMPUTER MAGAZINES BECAUSE COREL SPENDS FAR TOO MUCH MONEY VIA ADVERTISING REVENUE WITH ALL THE COMPUTER PUBLICATIONS, AND THEY DON'T DARE EXPOSE ONE OF THEIR BIGGEST ADVERTISERS, FOR REASONS WHICH SHOULD BE OBVIOUS. THEREFORE, WE CAN ONLY HOPE TO PASS THE WORD VIA NEWS GROUPS AND SIMILAR OUTLETS.

Corel Corporation, a Canadian firm, based in Ottawa, Ontario, has zero regard and zero respect for their customers, and is probably the best example of why Ziff Davis (publishers of dozens of computer magazines, both on the PC and Mac platforms), are now calling for a mandatory (and legally binding) 30, 60 or 90 day software money back guarantee.

Using data from Corel's own website, the following is more than sufficient proof to demonstrate the dysfunctional character of Corel's Word Perfect product:

THE FOLLOWING BUG LIST IS TAKEN FROM COREL'S WORLD WIDE WEBSITE:
==========

ftp://ftp.corel.com/pub/WordPerfect/wpmac/-WPMac ftp Index.html

(scroll way down, almost to the bottom)

What follows is the list of bug fixes initiated by Corel in an attempt to repair their cockroach infested product known as Word Perfect, version 3.5, which can easily be construed as a clear admission of bugs which existed with version 3.5 as shipped to customers on CD ROM. What makes this issue all the more criminal is the fact that Corel refused to inform customers who sent in their warranty registration cards that bug fixes had been released for this product. Corel Corporation refused to send warranty/registered customers the patches on floppy disk, and if this was too expensive, Corel Corporation even refused to send registered customers a postcard informing their customers where they could find the patches on the Internet. Customers were simply left to struggle with a totally dysfunctional product. And customers like myself who finally figured out Corel Word Perfect could NOT be made to function properly, and who first requested assistance, were ignored, and who later requested a refund, were also ignored.

TO THIS DAY, 17 MONTHS AFTER THE PURCHASE OF THE DYSFUNCTION AND COCKROACH INFESTED COREL WORD PERFECT PROGRAM, THIS COMPANY CONTINUES TO IGNORE ALL INTERNET E-MAIL MESSGES AND ALL UNITED STATES AND CANADIAN POSTAL SERVICES LETTERS.

==========

Corel Document ID: 10339

The information in this document applies to:
WordPerfect 3.5 for Macintosh

This Updater works with all versions of Corel WordPerfect 3.5. Including: Novell WordPerfect 3.5, Corel WordPerfect 3.5.1, Corel WordPerfect 3.5.2 and Corel WordPerfect in the CorelDraw Suite.

The Corel WordPerfect 3.5.3 patch replaces all previous patches for WordPerfect 3.5, including the Corel WordPerfect 3.5.2 patch shipped in October of 1996.

Fixes in 3.5.3 patch
==========

- Conversions should now function normally under System 7.6.
- A bug was fixed that repairs some display problems.
- Sporadic warnings that the common library could not be found will no longer occur.

Fixes in 3.5.2 patch
==========

- Text Selection now works properly.

- The Print Envelope feature will print addresses in the correct position on the LaserWriter 8.4 printer driver.

- Deleting to the right at the beginning of a line will no longer cause the cursor to reposition incorrectly in the text above.

- Deleting just before a Style no longer causes the cursor to reposition incorrectly and delete text within the Style.

- Editing a document in ?Show Codes? no longer causes the cursor to reposition incorrectly.

- Headers/Footers with text attributes (bold, underline...) are no longer affected by text attributes that cross a page break.

- Deleting addresses in the Print Envelope delivery or return address window now functions properly.

- The German Dictionary no longer stops and marks incorrect every word that contains a ? (esset).

- The French Dictionary on a Power Macintosh no longer stops and marks incorrect words that contain a ? (acute).

- Delivery Point of a bar code is no longer automatically calculated.

- Import of tables from various document types has been improved.

- The title of the ?WP6.x Export? now reads ?WP6.x,7.x Export? in both the patched and resale CD product from Corel.

- HTML export now saves Corel WordPerfect graphics or .wpg formatted images as JPEG?s.

Fixes in 3.5.1 patch
====================

- Editing some long blocks of Japanese characters will not crash the computer.

- Screen display is faster after scrolling through large documents or tables, or making editing changes.

- Captions can now be positioned above a graphic or text box.

- Return and delivery addresses in Print Envelope will now allow 255 characters (including line breaks).

- Dictionaries are now listed under the Dictionary menu instead of the Check menu.

- Ruler Bar display problems with PCI Power Macintosh computers have been fixed.

- WP 6.x and WP 7.x conversions can now be canceled.

- While working in subdocuments?such as headers or footnotes on black and white screens, Corel WordPerfect does not quit unexpectedly when clicking in the ruler area of the subdocument.

- Zip codes beginning with zero which did not have extended zip code digits now function properly in the Print Envelope feature.

- Font menus in Preferences and Print Envelopes now work properly on small monitors.

- Cleared tabs will no longer unexpectedly reappear on the ruler.

- Hyperlink copy and paste are now working.

- Cell Protection now disables the deletion of the contents of a cell.

- The bottom border of a table which crosses a page break is now visible.

- Patterns in a cell will no longer disappear when performing a Split or Join.

- Joining with the first cell of a table now functions properly.

- Row selection of tables in a text box is now available.

- Scroll bar does not stick when scrolling.

- Corel WordPerfect will use the Language Resource file designed for your system if present, or default to English (USA).

- Page Setup is now enabled in the Print Envelope feature (this allows the selection of paper sizes and envelope trays).

- Changing QuickCorrect preferences with no documents open will no longer crash the computer.

- Tables and Page Borders now work together.

- The PowerTalk Mailer can exceed 4096 characters.

- In the new Corel WordPerfect 3.5 CD-ROM, Norton Utilities will no longer report an error in the WordPerfect Installer Read Me. This fix is not available in the patch, but if you use Norton Utilities, we suggest you delete the WordPerfect Installer Read Me since it is not required for proper operation of the software.

- Corel WordPerfect Dictionaries and QuickCorrect word lists will no longer be replaced during installation.

==========

Postscript:

The above represents the bug list for Word Perfect 3.5, as I purchased this product, these revelations coming directly from Corel's website. Considering all these problems, it is little wonder that Ziff Davis Publishers are now suggesting we have a SOFTWARE LEMON LAW to protect computer consumers from future issues of this sort of software larceny.

If the reader will examine the websites of PC Week, PC World, and a few other leading PC-platform computer magazines, he will discover that Corel's Word Perfect, Suite 8 (the latest offering from Corel) is likewise

full of bugs. Don't take my word for it--- check it out for yourself.

MORAL OF STORY::::

SAVE YOUR MONEY--- DO NOT BUY ANYTHING WITH ���COREL��� ON THE LABEL, WHETHER IT BE FOR IBM COMPATIBLES OR THE MACINTOSH !!!

5748. FS: Kenwood Station

From: #fleet@mbl.edu
Message-ID: <#fleet-2605980901410001@pom1.mbl.edu>
Source record: 142972

I've just installed the FC20 tuner with my 847. When i try to load a certain antenna, it throws a carrier for a second then shuts off. I never receive a high SWR indication on the radio, as the manual states. I know the swr is high on this antenna, does that mean the swr is so far out of wack, that it justs shutsdown without tuning or do I have a problem with the tuner? Tnx in advance for any input.

5750. Motorola Low Band Maxtrac to Six Meters

Need Info,

I have a Motorola Maxtrac 300, 32 Ch.. low band radio (42 - 50
Mhz).
Would like to modify it to cover 6 meters (50 - 54 Mhz) i.e. add 4 Mhz
to top of band.
Need info on how to modify software to do this.
If you have this info,
post here in this news group or e-mail direct to
jc9010@injersey.infi.net
Any assistance would be greatly appreciated.

Thanks

I'm a big TT fan myself, but don't forget the Drakes. If you can
find a 2-C with a 2-NT or T-4X (or some other combos) they will
serve you well for under $500. If you find a nice Drake transciever
in that ball park, just make sure it has at least one CW filter!
Drake still services these and there is always lots of help to be
had on the Drake reflector as well.

5760. Cushcraft AR270B antenna problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-27 00:00:00 UTC
From: jrhodes@iti2.net
Message-ID: <356c71c3.98343399@news.newsguy.com>
Source record: 142734

I have had a Cushcraft AR270B antenna for nearly a year. I never had an SWR meter so I assembled the antenna as per the enclosed instructions and it seemed to work fine. I recently moved to another house about 3 miles away and the antenna did not seem to work as well as it did at the old location, even though I was now feeding it with 9913F coax instead of RG8 mini. I obtained an SWR meter and on high power at 146.000MHz, my SWR is over 4:1. On 446.000, my SWR is less than 1.5:1. I was careful in moving the antenna and don't think I damaged anything. I don't even see anything that could get damaged without being obvious.

Can anyone give me any help in resolving this problem? I don't understand why it would work fine on UHF but be very bad on VHF. BTW, the SWR at 144.000MHz pegs the meter (>5:1) while at 147.995, it is a little above 2:1. Can lengthening the antenna make that much difference? If so, should I adjust it at the lower adjustment point or the higher one? Will adjusting it make my SWR at UHF worse?

I'm hoping to get some good advice before bringing the thing down again. Thanks.

5763. An Astron problem .. fixed

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-27 00:00:00 UTC
From: bobdavis@cadvantage.com
Message-ID: <896309281mnewsbobdavis@cadvantage.com>
Source record: 142737

My nearly ten year old Astron 20A power supply, powering
my Yaesu FT747GX, recently failed.

The symptom .. the power supply regulation would not hold,
the output voltage would fall from 13.8 to 12.6 volts under
load. Up to about 4 amperes output, it would work OK, more
current than that, and the voltage would drop off, and hum
would appear on the output.

Solution:
Surprise! The regulator board is attached to the large
filter condenser with machine screws and lockwashers.
The lockwashers dig directly into the PC board copper
around the screw holes.

Aften some years of use, the copper on the PCB around the
screws just vanished. I suspect the heavy current flowing
into and out of the filter condenser just ate it away.

So I put spade lugs under the screw heads connected to the
PCB by heavy wire. The Astron works again, and the 747
therefore, works too.

Who lost an HT? I picked one up that someone had set down and walked off without. If you can identify it and where, what time/date, and I can be reasonably sure that it is yours, you will get it back. Hint-hint. The serial number will be stamped on the box.

I kept checking with the head table in the arena, there were no announcments of lost radios. If you can't identify it, then I may keep it. It is nice, but I already have one.

The same thing happened to a friend of mine. (and we used the same fix) I would also suggest anyone having one of these occasionally open the cover & make sure the screws on the capacitors are tight. A loose connection here can cause thermal runaway that results in exactly this problem.

73 Doug

This is really a tough one. You are comparing rigs designed for totally different uses. Kinda like comparing an orange to a horse to a computer.

However, if you are only interested in HF, then the 1000 or 1000D is a good selection. For less money, but the same high quality, try an FT 990 (sadley, it is no longer in production). The other rigs are not in the same league receiver wise, but do offer expanded coverage into the upper bands.

It all depends on what you want. A station all in one box (HF, VHF, UHF) or a high quality HF station.

Myself, I prefer HF equipment for HF. But the wave of the future may well leave me in the dust. See the Icom 706 MkII and the coming Yaesu FT-100.

Damn, and just when I had most of the bugs worked out of the DX60 on AM and got the Hammerlund 110 realigned.

>bits, the 8250/16450/16550 will generate 1.5 stop-bits when using a
>5-bit word length, and I vaguely recall other UARTs supporting 1.5
>stop-bits.

I must have used inaccurate terminology, since by split stop bits I
was referencing to 1 stop bit in Rx and 2 stop bits in Tx (or 2 Sbits
in Rx and 1 Sbits in Tx). This is definitely not the same as 1.5 stops
:-). You can set most UARTs to 1, 1.5 or 2 stop bits, but I haven't
seen one in which the transmitter works with 2 Sbits and the Rx with 1
Sbit in full duplex.

Having a full duplex link with both transmitters using 2 Sbits and
both receivers using 1 Sbit would require split-stopbits support at
both ends of the link. So it is much more practical to run the whole
system (both ends) at 2 stop bits, if one receiver requires 2 stop
bits.

Compare this to 75/1200 split-speed, this is not 0.0625 speed or
637.5 (arithmetic mean) nor 300 bit/s (geometric mean).

Once and for all: owning a cell-capable receiver is legal. Modifying one may be illegal. Offering info on modification is legal. Listening to cell frequencies is illegal. However, the risk of prosecution for the casual eavesdropper is nil, none, nada. If you record cell conversations and then publicize them, then you hit the jackpot. End of story.

> And if it should be repaired could somebody recommend a place?
>
Sorry, but there appears to be no fix for this problem to the best of my knowledge. It is basically a design error -- wide-band FM mode is wider, but not wide enough for the FM broadcast band. It seems to work nicely on TV audio, but you're right about it being terribly distorted on music from an FM broadcast station (88-108 MHz).

At least they didn't make the same mistake with the VX-1, from what I've heard. (No, I don't intend to trade DOWN from an FT-50 to a VX-1!) In fact, rumor has it that there was another mistake they didn't repeat, namely a huge notch in the RF frequency response around 222-225 MHz.

Don't get me wrong, I love my FT-50. In fact, I dropped it off for service a few hours ago and I miss it already! (I probably should NOT have used the word DROPPED, as that's why it's in for repairs -- one too many falls to the hard pavement, this time resulting in damage to the LCD display. Dumb, dumb, dumb. Or maybe too complacent from all the other accidental abuse that it survived without a hint of damage!)

There is no doubt that he would have killed them any way this NICE
LITTLE BOY was found to have at least 3 bombs that were made out of
common household items that are in almost every house. But we can
eliminate this problem by banning or at least registering and having a
waiting period on these every day items or maybe ban ar register the
knowledge. What do you think? Ban or register every chemistry book and

teacher in this country and make sure we include an import ban on all common household material that could be combined in some manner to create a bomb. How does this sound?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-27 00:00:00 UTC
From: !*dimitrip@tiac.net
Message-ID: <356b8d4e.30162829@news.ecom.net>
Source record: 142776

Is there a known intermittency problem with the ICOM 730 HF radio?
It seems to lose contibuity from the anntenna connector to wherever it
goes so the receiver can "hear".

Tapping at the top of the case makes the connection OK and the
receiver alive again.
Does this ring a bell to anyone ?

Source record: 142778

I don't know what I have done. I opened my Kenwood TS-940S to just blow out the dust with a air can and hand push down any connectors to make sure they were tight. I hooked the radio back up and No Receive and No Transmit Power. I can barely here a local station but it is not moving the meter. Everything else is working fine. When I key the transmitter there is absolutely no power out. Could anyone help. Basically no receive signal.......and no transmit power. Everything else is normal.

5799. FS: Drake Manuals on CD ROM

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-27 00:00:00 UTC
From: HAManuals <dturini@aa.net>
Message-ID: <01bd8928$714534e0$010ab488@matilda>
Source record: 142779
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

How would you like to have manuals, schematics, modifications and references for Drake radios available at your fingertips for viewing any time you have a question?

HAManuals is pleased to announce the availability of the first in a series of reference CDs for the radio collector and restorer. With the permission of R.L. Drake and other equipment manufacturers we are able to offer a very complete library of equipment, service and accessory manuals on CD for Drake radios.

HAManuals Series 1, the R.L. Drake Company, is a two CD set that contains:

* manuals for Drake radios from the 1-A to the R8, including many commercial models
* service manuals for the R7, TR7, R8 and numerous commercial radios
* modification and historical information from Sherwood, Sartori, Fox Tango and others
* manuals for Drake addons and accessories, including DX Engineering Speech Processors and E-TEK Frequency Readouts
* the new update to Wayne Montague's Drakemod 6 - Version 6A
* manuals for the TV-7 and TV-10 tube testers including updates to the latest tube reference data
* a bibliography of Drake related articles
* a complete listing of all Drake amateur and commercial radios
* screen saver images of Drake manual covers
* and much more!

These CDs are viewable on any computer that supports Adobe Acrobat Reader, available free of charge from Adobe at www.adobe.com. You can view this CD on a MAC, PC, Unix, Linux, OS/2 and other computers.

Purchasing these manuals individually would cost you over $1,000 for the complete set. Now, for less than $80 you can own a reference library of Drake material, including many hard to find manuals and schematics.

HAManuals Series 1 - R.L. Drake Company made it's debut at the Dayton Hamvention to an enthusiastic crowd.

Following is a list of the Drake manuals on the HAManuals Series 1 CDROM. In addition to these manuals, there are numerous modifications, data sheets, a bibliography and the new update to Drakemod 6.

Some time ago, I posted to this group regarding a need for a TS-600 and a TS-700. Well, I have found really nice TS-700SP that is now mine, but I still am looking for a Kenwood TS-600 6mx all mode. Anyone have one or know of someone with one for sale, gimme a holler at <ve6inm@aol.com>. Thanx and 73's

Ham License plates for sale

All are Ohio plates, with no year listed (Ohio has not put the actual year on
the plates for some time), except the last one.

Several different plates are available, as follows:

W8EK - Blue lettering - good shape $ 20

W8EK - Red lettering - not quite as good condition as the one above $ 18

N8AJU - Blue lettering - looks almost new $ 15

WA8ETX - Red lettering - slight rust at bottom -
1965 year on the plate $ 15

Prices do not include shipping from NE Ohio.

Thanks.

73,

Ken, W8EK

5806. Re: DCS for FRS different? what the heck?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-27 00:00:00 UTC
From: chappel@eot.com
Message-ID: <356ba031.3212663187@news.polaristel.net>
Source record: 142786

I recieved the following message:

>Chris,
>I think you are a little confused. The FT-50 has tone squelch as well as digital squelch. The tones start at (frequencies of) 67.0, 69.3 etc. The digital starts with (octal codes of) 023, 025, 026 etc.
>You have to enable the DCS feature before you can edit the digital code selection. If you are in tone squelch mode it will edit the tone value. If you are in carrier only mode it won't let you edit them at all.
>I too have been interested in the Yaesu FRS radios for my family, but would like to use my FT-50. Let me know it you get it to work. It should.
>Bob KI6WO

I _guess_ I was a little confused. I've been using tone squelch, but
still seemed to confuse DCS with CTCSS. It still felt good to vent a
little, and I really appreciate all the helpful advice available here.
I'm going to try out a VXF-1 as soon as I can scrape up an extra $109.

Joe,
Sorry to say, can't be done. It was designed for ham-bands only, and mods
would not be practical.
Great little rig though, enjoy it as it is.

FT-50 (and VX-1 and IC-T[278] and ...) uses 9600,N,8,1.

You might like to look at my Linux-based programming software, which
supports FT-50,
VX-1 (and soon IC-T7, -T8 and -T2). The package includes protocol and
data descriptions
which might be very useful. It's free and available from

ftp://ftp.funet.fi/pub/ham/rigctrl/linux/yaesu-0.2alpha.tgz

It is probably the best advice you can get. Importing ham radio equipment
without a ham license is difficult at best. Importing it with one is
still a hassle.

Why put yourself through it? There are plenty of dealers in the US. Most of them
will offer you better prices as the US dollar is much "stronger" than the
Canadian.

Geoff.

Dean,

My advice is to buy a good used TenTec rig that is solid state (transistors),
and if you can call TenTec and buy a used rig from them. When you go looking
at hamfests buy Tentec. I have been screwed buying Kenwood and other models
by nice looking older men telling me that it works great, then finding when
I get home that the equipment had major problems. TenTec will repair their
older equipment if you do get stuck. I've learned my lessons (been a ham
since 1967) and don't buy anything but TenTec.

Serge,

The distorted audio is normal. Yaesu didn't make the wideband (WFM) wide enough so it sounds pretty bad. I was sort of disappointed when I got mine but that's OK. I still like my FT-50r very much - it goes where I go!

Hope this helps

Hmmmmm....what else is there to be "normal"?

Make sure all the front panel controls (buttons, squelch knobs, etc) are in the correct positons. There is a knob which controls output power and another which controls RF gain (and a button which is an RF attenuator).

Once had a Ts-440 which "died". After getting ready to take it to Kenwood, I discovered that I had accidentally tweaked a couple of knobs while moving it -- and that was the only problem.

5820. TM742 6 Meter question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-27 00:00:00 UTC
From: soak4me@hotmail.com
Message-ID: <356bd0f7.52766965@dnews.pacificnet.net>
Source record: 142800

All,

I just installed a 6 meter module (UT50S) module into my Kenwood TM-742A radio and the module insists on a 1 mhz. offset rather then the 600 Khz. split used here in LA, CA. I can fake the thing out in memories by setting a specific offset but would prefer the radio to default to 600 Khz. so that I can use repeters from the VFO.

Anyone else have this problem? Is there a way to change the default?

Thanks in advance,

Tommy

Is there anybody out there that has both of these great radios and can make comparisons/contrasts? I'm most interested in receiver performance and also ease of operating in pile ups. Many thanks, de John, K7JY, Seattle.

How hard did you "push" on the components inside your rig while cleaning it?
Was it hard enough to break the foil on a circuit board or pop loose a
solder joint? Sounds like something isn't making solid contact....

The heterodyne oscillator is unplugged, either on the PLL unit(most
likely) or the IF unit. The PLL unit end is a coaxial plug at the right
front corner of the board and very easy to miss.(Looking at the front of
the radio).

Bob,

I use a Skyscan wideband outdoor antenna on my Yupi 7100 - it's pretty essential really. You will onlu overload it if there's a powerful transmitter next door. It is a very good scanner, a lot of people here in UK use them and usually say they are as good as the AR8k without the features. I read the whole of that thread you started because I am visiting the US in a couple of weeks and I want to bring my Yupi with me. No, I don't want to listen to drugs deals and radio phone-in contestants on 800Mhz like most of you guys seem to want to, but I would like to know what kind of hassle to expect from US customs.

Ken

Ken,

Unless you give them reasonable cause to search your bags, you should
have no problems taking the scanner with you into the US. A lot of people
in the US own a Yupi 7100 as well.

>Are any of them able to interface to a computer for programatical
>operation ?
>
>Are there any good multiband HT's with an Application program interfaces
>(API) published by the manufacturer ?
>

I just spoke with ICOM Tech Support. Their dual and tri-band HT's
can be programmed using their software, but they don't provide an API.
They are considering it for some of their older radios.

I mentioned to them that an API, perhaps requiring a non-disclosure
agreement, is needed to write software which might be useful for
handicapped hams to operate their equipment.

Does any one have any suggestions on HT's to look at ?
My requirements are:
Power output: 4-5W PEP
Tx Freq: 144-148Mhz, 440-450Mhz
Rx Freq: similar or extended
Application program interface so that I can write or use software
(OS=Linux, Winnt, etc) to control and operate the HT.

And in fact it does work. I finally tried it last night. There is an option to add some delay between characters in the Stramp Basic SEROUT command. Adding just a couple milliseconds seems to do the trick. Likewise, there is a software settable option in the Yaesu called "pacing" which allows delays between bytes returned from the radio to the computer.

So thanks to all for your help. Still a long ways to go on the software for this project. I'm modifying the Remote Base Controller (May QST) for use with Yaesu's. Will post all when completed. In the meantime, I know I'll be back with some more questions.

I had also tried this and it works okay. A better method is to get
a wire outside somehow. I ran a 20 gauge wire on outside of building
up past second floor. Its only runs 20 feet up building, but works
much better than my 40 foot loop on inside of apartment. Signals
are often several S units higher on the outside wire.

With 20 foot vertical wire, I've talked from Denver to Japan, New
Zealand, Austalia, Europe, and Hawaii.

Hi,

A friend of mine is in the process of changing ISPs so he asked me to
post for him.
He got hold of an IC-706 Mk II recently but unfortunatelly he has no
manuals whatsoever. With all the different menusettings it's nearly
impossible to use the radio (even only 10%).

Is there anyone who can help with info about this TRX? Copy of the
manual or info how to order one?

Thanks,

bye Maurice

>missing that the W32 has and would I need or miss it?

The W32 has 200 memories, while the W31 has 100. There are some interface differences, with most users finding the W32 easier to program. The W31 has some DTMF paging and code squelch functions that were not included on the W32, due to the fact that they're not very popular here in the U.S.

I just bought a used W31 in decent shape for $185 shipped, while a W32 will most likely run you more than that. Money wasn't really a consideration for me, though. I chose the W31 because I was able to restore the full broadband receive with relative ease.

Both radios seem to be of fairly high quality and are ergonomically pretty sound. The backlighted keyboard and display are particularly nice. If you'd prefer the extra memories over the wider receive range and don't mind paying a few extra bucks, then go for the W32. If, like me, you'd like the wider coverage, the W31 is the way to go.

Good Luck,
Scott

Just a cold solder joint or dirty corroded connector not making contact, or
it could be a circut trace opened up.

Here's what I would do...I would take the cover off the radio just like you
did before and retrace all your steps with the power turned on. That way
when you push here and push there and you hit the spot everything will come
to life, When you find that magic spot then the real work will start. You
will have to lift up that board and check with a magnifing glass for cold
solder ect, it could be kind of frustrating, but thats what us hams get
paid for, right Remember there is 115 vac in the radio so watch your
fingers, I know you know this but its always a good idea to remind. Good
luck and happy hunting.

>Any tips?
>
If you can accomplish this with software, that is the way to go. A
hardware modification could reduce the value of the FT920, because a
buyer may not be interested. Also, there's less risk of damaging the
transceiver.

The popular Zilog SCC (Z8530, i82530, etc.) gives the option of 1.5 stop-bits, the 8250/16450/16550 will generate 1.5 stop-bits when using a 5-bit word length, and I vaguely recall other UARTs supporting 1.5 stop-bits.

I am just as happy switching 20.00 hamstick antennas. I do cw on 10, 15, 20, 30 and 40. I always pull over. Therefore changing the stick is no big deal. I rarely do anything but fm on 2 meters, so I have a seperate antenna for that. If they are stolen, no big deal. I do suggest an amp for the 2 meter side. 20 watts doesn't cut it if you're out in the field a lot like I am. A bigger issue might be having a mike with tone controls built in so you can phone patch over a repeater. I also put in coax switches under the seat with coax attached so it's easier to set up the beams when I want to go mountain topping.

5850. Yaesu FT1000MP Wanted

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-27 00:00:00 UTC
From: dscully@conectus.com
Message-ID: <354e8674.796993@news.ftel.net>
Source record: 142868

Looking for a very clean recent version of the Yaesu FT1000MP. Send an email to dscully@conectus.com or call my office @ 800-350-0373. Ask for Dennis

5851. DCS for FRS different? what the heck?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-27 00:00:00 UTC
From: chappel@eot.com
Message-ID: <356b696e.3198643578@news.polaristel.net>
Source record: 142869

I got a FT-50 a couple months back, having spent several months learning about features and options. Among other uses, I would like to be able to use the Digital coded squelch feature to communicate with non-hams using Family Radio Services frequencies. I know they also use DCS, and frequencies that are within the FT-50s spectrum. I was a little extra excited when I read about the Vertex (Yaesu) FRS radio support for the Yaesu ARTS feature (which will beep when the radios go in or out of range of each other). But, as I read further, to the freq. listing on Yaesu's home page, that the DCS codes used for the FRS are DIFFERENT from the codes available on a FT-50 (the FRS uses 023, 025, 026, 032, 036, 043, the FT-50 starts at 67). WHY? These radios are made by the same company, the '50 supports about as many other codes as I thought anyone could possibly use. What possible reason, beyond FCC bullshit, could anyone want to make something that should be SO EASY into something SO IMPOSSIBLE?

I think I've gotten some of that out of my system. Now, is there any possible solution to this? Has anyone tried an FRS radio with a ham radio? I'd heard someone mention that it should work, as long as the ham were set to a low enough power setting, and the FCC didn't notice that the ham radio isn't specifically licensed on that band. Can DCS be disabled on FRS radios? Can the DCS codes be altered on the FT-50?

I guess I'd like to use my FT-50 the way anyone else would use an FRS radio, without having to buy one. The odds of my wife becoming a HAM are even slimmer than the odds of Yaesu shipping me a replacement, compatible radio, with the FCC paying for the shipping.

I have a Ten Tec Delta 580 HF rig for sale. It operates 160-10 meters, including WARC bands. Has both CW and SSB narrow filter options. Comes with hand mike, power connector and a copy of the manual This is a QSK rig that works great, never mobile, clean, used by non-smoker, and was used as my backup rig. Nice looking, too.

I bought an expensive new rig, is why I am forced to part with this beauty.

$425.00 shipped lower 48 states.

Ten-Tec's "T-Kit" line contains some really interesting, useful products, and they're quality stuff. I've built a couple of them myself. Ten-Tec's service is also second to none!

There are a number of suppliers of QRP kits that carry some nice stuff. If you do some net surfing, searching for QRP pages, you will find links to many suppliers.

I don't care for Ramsey kits. They're inferior in my book (this is my personal opinion, based on some experience... everyone keep your "flames" to yourself if you feel otherwise!).

Dean - K5DH

5860. Re: FT847/ FT920/ FT1000 Comparisions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-28 00:00:00 UTC
From: "Peter A. Klein" <pklein@seattleu.edu>
Message-ID: <Pine.GSO.3.95.980528094528.25403A-100000@mozart1.seattleu.edu>
Source record: 142629

In response to John Toscano's questions about the FT-847 vs. dedicated HF rigs. . . First, a couple of my own questions about the FT-847. Then, an explanation of what many dedicated HF operators look for in a rig.

If anyone has tried the 847 side-by-side with a "performance" HF rig like the FT-1000 series, andd has some impressions of receive performance, I'd love to hear them. Particularly close-in unwanted signal handling ability.

Similarly, I'd like to hear how the 847's receive performance is on 2m and 70cm. The 847 is supposed to replace the FT-736R. My FT-736R is a great, convenient satellite rig, but the its strong-signal handling ability is not so great, especially on 70cm. (This has been noted in the QST reviews). Nearby strong signals overload the receiver, the noise floor goes up, and spurs appear all over the dial. Has the FT-847 improved this?

John: I think the main thing Bill is talking about is real-world HF receiver performance. HF is a crowded, dirty environment. Many low and medium priced radios, and many "do-it-all" radios like the IC-706 have their design compromises weighed in favor of small size, (relatively) low cost, and as many cool "bells and whistles" as possible.

Many experienced HF operators want their radios designed with much more weight given to selectivity, good filter "skirts," the ability to use any filter in any mode, low noise floor, low phase noise and good performance in the presence of close-in strong signals. These strengths are commonly referred to as DXing/contesting features. But they really make a difference in operating pleasure, the ability to separate two close signals, and the ability to hear weak signals on a crowded band.

The FT-847 sounds like a wonderful, "everything in one box" radio. You'll notice that a lot of people are asking about its computer control capabilities, whether you can do crossband dual receive, and how effective the auto antenna tuner is. That's what I call the "cool stuff."

Not much has yet been said about its basic HF receive performance. To a dedicated HF operator, the latter is much more important. I would love to hear from a DXer or contester who compared an 847 to his FT-1000D or Ten Tec Omni V or VI. *Then* we'd begin to get the picture on its HF performance.

The fact that an IC-706 can hear signals from New Zealand is nice, but it doesn't tell us anything--most radios made today are sensitive enough. What matters more is whether it could hear that same signal if there was a strong signal 2-5 kHz away. Or a weak CW signal if there was another strong one 300 Hz away.

To cut to the chase, I'd give the basic receive performance of an FT-1000 or Ten-Tec Omni an "A" grade. The FT990 is probably a "B," the IC-706 is a "C". This is not to knock the 706--it's HF performance is good enough for many, it has two meters, and it's impressively tiny. I'm just calibrating the receive-quality scale.

Now, the FT-847 costs a bit under $1900, street price. For a similar price, you can get a grade "B" HF-only radio. But the 847 has added both VHF and UHF, and satellite/duplex capability. The question is, what compromises were made in other areas to keep the price down? Unfortunately, current marketing practice tends to keep the "cool feature" count up at the expense of basic receive performance, because the latter is harder to sell to the average ham.

73,
Peter - KD7MW

Message-ID: <356DDCF7.C3313689@postoffice.ptd.net>
Source record: 142641

Hello,name here is Dennis,call is WY3F...
I have a Icom IC-706 rig.
I noticed that Icom is closing out the matching antenna tuner (auto) the AT-180.
I would like one of these tuners the at -180,but I see that they list a new tuner the AH-4 auto tuner,but I herd that u need to use this antenna tuner for wire antennas only?
I have a mobile antenna I want to use,that is why the at-180 seems to be the better route.
My question is what other auto tuners has anyone tried beside the AT-180 ?
Im interested in finding out if any one tried the Kenwood AT-50 tuner with a 706 ?
I dont really need a tuner on 6 but the other bands are a must.
That is why i am trying to work around the AT-180,and because the price too.
Any input would be great 73 de Dennis WY3F....

Then one must wonder why you would choose to repost the entire ad,
even including the sig :-(

BTW, as you claim to have a copy of the charter for this newsgroup,
would you please post it or email it to me.

Ive had my rig for a few weeks now. I love it. Recieve is excellent.
Its a great 20 watt radio. The radio came along on a trip to a country inn
over the Memorial Day weekend. We convinced the inn keeper to let me put
up a G5RV jr. I worked 20 & 40. Was able to keep a schedule with a friend
1200 mile away. Radio has all the features you will need. I also picked up
an LDG automatic tuner for the 2020. The tuner also workes great.

I have used the 2020 on battery power but not for a very long time.

If 20 watts is enough for you this radio is tops... IMO
Its easy to use, has a band pass filter and band width adjustmet that
help a great deal in removing interfearing stations.

I have scanned an image of the rig sitting on the LDG tuner if you need o
get an idea of the size.

LDG can be reached at http://www.radix.net/~ldg

According to the manual, the auto tuner and computer control are NOT
compatible!

I just put up my G5RV dipole and should have the auto tuner by tomorrow.
I'll try the CAT control with the tuner hooked up and advise! Also, I did
discover a bug. I you have a memory channel with PL 118.8 encode/decode and
you turn off the radio and then back on, it will not decode 118.8. Yaesu has
verified this bug and assured me that they will come up with a fix very soon
for it.

Besides Ten-Tec, as recommended by K5DH (and I heartily agree), another source that MIGHT be of interest is Down East Microwave. They have a wide selection of kits in a narrow field of interest, transverters and related items. These are devices that you add on externally to your 10 meter HF or 2 meter VHF transceiver, and convert it to work on a different VHF/UHF/Microwave band. The quality of the kits is excellent, although the assembly instructions are definitely not "Heathkit quality" (for those of us who have been around long enough to remember that famous, defunct kit company).

DEM has transverters to convert a 10 meter rig to 6 meters, 2 meters, 1.25 meters (222-225 MHz), or 70 cm (432 or 435 MHz). They have many transverters that convert a 2 meter rig to many of the bands from 902 MHz up through MANY GigaHertz.

You can find them on the web at:
http://downeastmicrowave.com/

Enjoy!
John (KB0ZEV)

Source record: 142671

Ken,

I've had my SG2020 for abt 10 days now...

The rig goes 1-25+ watts and does SSB and CW. Nice small package....

It's an excellent SSB rig for the price...I got great audio reports even with the stock mike also as good as my Heil 5.... rx is good, maybe an "s" unit lower than the Knwd 850 (which speaks highly of the 2020) I worked 30+ DX countries in the first few days testing it out with a Gap Titan running 5 watts... it's max is abt 27 watts as tested here.

For CW it would keep the average user happy but not the heavy qrp cw one. I found the digital filters and the agc to cause some ringing and slight pumping during use with a strong nearby station... The straight key clacks the relay with every key hit (a noise pain to me) but the built in keyer made it a little better only releasing the relay after each letter...

Noise blanker seems to make no diff, passband works ok but shifts freq too at times. All other function work well.

Current draw is higher than spec'ed...5 watts cw drawing 3 amps and rx at abt 600ma.... On a 7ah battery , I ran it (ssb) for abt 4 hours without maxing out the battery,...anyway,so it's not a backpack unit but more of a mobil unit type for weight and current.

I'd rate it an 8 of 10 for SSB and abt 5 of 10 for the CW op...in all , I'll keep mine for now until the K2 or FT100 come out.

Tom aa2vk

Glenn,

The only negative comment I have about my MFJ4035MV is the cooling fan is quite noisey, IMO. The fan's speed varies and cycles with current loading. If I had it to do over again, I would have paid the little extra and got a Astron RS35M.

Most local electronic stores stock pocket DTMF dialers for use on none DTMF
phones. Some even store autodial frequencies. They usually run around
$20. Something extra to keep up with, but cheaper than the optional mic.

5909. Help with FT-8500 mute

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-28 00:00:00 UTC
From: Steve <n8nyu@provide.net>
Message-ID: <356CEB70.2E8A25BC@provide.net>
Source record: 142679

I turned off auto mute, no time set for delay mute and set off instead
of selecting uhf or vhf.
When I hit D-8, the word mute appear's on both bands and both bands are
muted.
I am looking for setting it so when I hit D-8 the opposite band is muted
or toned down. It seems the instructions say it can be done this way,
but I'll be darn if I can get it to work that way. HELP!

Bill, I would love to know more about what you mean by the phrase,
"...not in the same league... as a high quality HF station". Not
because I'm trying to dispute you, but because I really don't know.
I've only been in Amateur Radio for 18 months, and have lots more to
learn. And I own both an IC-706 MkII and an FT-847. And my HF
experience so far is limited to 10 meters, since that's where my
phone priveleges stop (so far).

I guess I can believe that by cramming extra bands and extra features
into compact packages, something had to suffer. But WHAT am I missing
by not owning a "real" HF rig? The IC-706 has pulled in signals from
New Zealand on 10 meters, even though it was connected to a 6 meter
vertical antenna at the time; I didn't get the opportunity to see if
it could be HEARD all that way, as the guy was ragchewing with a
station here in the US, and when he finished that QSO he shut off the
radio to go to work for the day! Anyway, it _SEEMS TO ME_ that the
IC-706 hears pretty well. And it's way too early for me to have a
useful opinion on the FT-847 based on actual usage, as it has only been
on the air for 2 hours, for half of the 432 Sprint contest -- I have
not yet even tried the other bands!

Anyway, I'd like to know more.

Racal RA1792 Receiver

£780 o.n.o

150Khz to 30Mhz Coverage, 1Hz steps with list search
AM/FM/CW/USB/LSB
Filters fitted
0.3KHz 1KHz, 3.0KHz, 6.0KHz, 16KHz and 2.7Khz USB/LSB
SCORE board fitted and working!
Internal A8 frequency standard fitted.
For the technical amongst you the precise model is a GB/S/1/0/S/1/A s/n 8797 except that the 3.2KHz usb/lsb filters have been replaced with 2.7KHz filters. I have in stock a number of other narrower filters if anybody is interested.

Drawing Number is ST 80730

New Liquid Crystal Display Panels have been fitted so no 'going black' problems.
New on-board Ni-Cad battery fitted so no nasty leaking battery acid on the processor board.

This receiver has been fully tested and aligned by an ex. Racal Radio Engineer (me!!) and is in very good condition. Sensitivity is better than spec. and I have a full history including full build state information.

Contact me by e-mail mike@gibsonmb.demon.co.uk or phone me on 01494816342

5923. FT-847 Bug and shortcomings

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-28 00:00:00 UTC
From: Dave <rocket@ultracom.net>
Message-ID: <6kjmdt$ip8$1@supernews.com>
Source record: 142693

Hi All, Just received my 847 and found the following bug:

Program 443.450 rpt into memory 1with PL 118.8 encode/decode. Goto memory 1 and turn radio off then back on. It will not unmute unless you hit the tone button 4 times to cycle back to encode/decode or go to Menu 12 (tone select) and select another PL then go back to 118.8. I've emailed Yaesu and am waiting reply.

Also here are three shortcomings of the radio. Makes you wonder about design engineers!

1) Cannot have DCS encode only (either CSQ Rx or PL Rx). Even tried split memory. Yaesu had said it would be able via split memory (this was BEFORE radio was released though).

2) CAT cannot be used when auto tuner is hooked up and operating. Dumb idea!

3) Beep on channel activity during scan. You cannot turn off the beep on activity during scan without turning off the keypad beep also.

Unfortunately Yaesu is the only game in town if you want HF through 440 in a single radio.

Message-ID: <6kjn9k$1o@bgtnsc02.worldnet.att.net>
Source record: 142702
Body handling: Binary attachment payload not displayed: vcard.vcf

I have an out of warranty version A105 Yaesu VX-1R. I have been scanning my 70 memories, programmed with the ADMS-1D software, with no activity being received for two days. This was very unusual for the Cleveland Ohio area. I found the problem to be the radio's digital display showing approximately 15 khz lower on VHF and approximately 40 khz lower on UHF from the actual frequency. Looks like my memorized frequencies are also off by 15 and 40 khz from the actual frequency. CPU reset via keypad did not cure the problem. Has anyone experienced the same problem? Does is sound like the radio will make a trip to Yaesu?

Thanks,
Peter

I have an FT-757GX II and I suppose I will wait for the FT-847 II! It
sounds like a great radio so far which needs a few "real world"
improvements.

Source record: 142714
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.cb

Hi,
I am trying to rig up an external PTT switch and a mic to a handheld
CB radio. I am looking at UNIDEN/Radio Shack and Maxxon models. On
radioshack I have found that it has a 2.5 mm mic jack which is also the
PTT. How do I activate the PTT. I would like to keep an isolated push
button switch to activate PTT and talk into the mic.
On searching the web I found that there are some circuits for
connecting TNC in ham radios but those require the mic to be powered
externally and I dont want to do that.
Is there anyway I can get the wiring diagrams for connecting an external
mic and PTT switch.

Thanks,
Jay Samuel

About a year ago I purchased an serial adapter from a website and cannot find that site again. I lost/misplaced the instructions for connection of the four wires to the rig. If the owner of the site should see this or any one that may have purchased one also, please get in touch with me butchkay@netdoor.com

The serial adapter has 25 pin male with din plug at other end and a din plug plugs into that and it has standard phone cord from there to rig, black, red, yellow and green. I must have tossed the instructions and hope one of you guys can help me out.

tnx, Butch KF5DE

> > you want.

Yeah, if you want to stick to >= 50MHz it's a piece of cake to get it But if you have the time, the 5WPM code you need for Tech+ can be achieved quite easily, and in fact with good study technique (see http://griffy.nmt.edu/sara/sara/finley.morse.html for the one I used and recommend) you can even get to 13WPM or more in a month, if you care to.

> > If you can't find a ham class in your area, then yes, I suggest you
> > buy 'Now You're Talking' at a Radio Shack, and start studying it.

NYT is highly recommended. If you're even a little technically inclined you'll find the level of the Tech/novice written exams quite simple, but if you're not then you should find that NYT explains it well enough.

> > Also, look for sample tests on the web. The best sites let you take a
> > test and then grade it immediately. Try:
> >
> > http://w5ac.tamu.edu/ham-exam-v2/ham-exam.html

This is a good one, but I've found that http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html is even better. It not only generates random tests and grades them on the spot, but you can establish an 'account' which stores the history of your exams between sessions, and has a "selected" option which picks questions you've gotten wrong more often than those you tend to get right, so you drill where you need it. An *excellent* resource, I used it to study for the Novice, Tech and General exams, and I think my summer project will be Advanced.

> > Once you are licensed (or close to getting it, anyway), head for
> > your local ham radio club and ask to see members' HTs.

Good advice. I'd also recommend finding someone who's willing to share a large number of back-issues of QST so you can study reviews. Although I've yet to read reviews that completely trash a given product, you can get a feel for the weaker points of a given rig.

> > Many readers of this list will strongly advise
> > you to buy a mobile radio instead of an HT, and for good reasons
> > (not repeated here), but consider whether you will be operating
> > from more than one car, or on foot or bicycle. I prefer an HT.

And with a docking booster amp, a speaker mic and a magmount antenna you can have something that is approximately a mobile rig when you need one. I won a second HT in a contest, and decided not to spring for the mobile rig (I'm a cheapskate), opting for the booster amp solution which suits me Just Fine here in NM where the repeater coverage is excellent.

David,

I recently put up a used tower. I found that although parts are
available.... Nobody would sell me a base. I suspect liability
problems. I was able to fabricate a new base just like the new base. A
welding shop should be able to make you a base. Better check the cables
and pulleys. Rhone was great...they sent me a manual with all the specs.

Just a quick email requesting the address of a company selling antenna
kits or components.

I am looking a making a 15 element Yagi array with 5.8mm diameter rods.
The frequency is in the 1.5GHz region.

What is required are:

A 1" rectangular section boom.

Clips for fixing the elements to the boom.

Specific clips for attaching the active element to the boom, allowing for
an interface between elements and a bazooka balun.

approximately 5.8mm diameter rods (to be cut to size) for the elements.

Thanks,

Andrew Randle

Source record: 142526

The 2020 sure seems like an interesting radio. I've downloaded the operations manual from SGC's web page and it has a small section devoted to circuit description. An unusual approach to a receiver but apparently quite workable! Has anyone seen the schematic and feel able to describe the synthesizer? The manual states that frequency increments smaller than 10KHz are handled by direct uP control of the reference. It sounds like there is no feedback ("phase-lock") after the 10KHz synthesizer loop, hence all the attention to calibration problems. It also appears from the manual that there is a simple oven (PTC thermistor?) somewhere in the frequency control department. My initial impression is that no engineer wants to put an oven in a rig destined to run on batteries. Admittedly, I'm guessing- but I would love to know more before I buy.

Thanks for the pointer to the MFJ manuals site, but the online manual has one part missing - the schematic. I need one to make modifications to improve the VLF reception and phasing.

Hi Guys;
For SALE:
Kenwood TS-820S Digital version w/optional CW filter, exc.condx+, non-smoker, no manual, everything works fine except it does not xmit at all, nada, no bias, no current, nothing. All tubes are in, the inside looks like new, no obvious burns or arcs.
I am not a tech or even close. I was just looking for a loose "watever" but no such luck!
The receiver works just great, along with the rest of the features, but no xmit!
I will double box and sell for $240 plus shipping!
Anybody up to the challenge?
Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

David,

I'm just putting my 52SS back up in the air at its 3rd QTH in 17 years. You need to know that HyGain is getting out of the tower business--a new base will cost you $326--I just bought one. If you ever plan on moving you may want to consider buying an extra one; know that sounds silly, but I'm in the military and I'll probably move again. It is a great tower however--not sure what one is worth on the used market. If you do get it and buy a new base you may want to consider getting the two cables that raise/lower the tower and re-rig it before erecting it; I did that too. You'll need about 2 1/2 cubic yards of concrete to fill the hole for the base--check out the price of 3000 psi concrete with your local cement companies. I've been thru this three times so I feel like an "expert". If I can help just yell.

A friend of mine bought one. Mike Burton N6KZB. We ran it through
extensive battery of tests on all bands. It failed miserably. It is
now back at the factory. If it comes back OK and in proper working
order he says he will keep it. If not he wants a refund.
In my opinion, having played with it, I wouldnt buy one on a bet.

Dimitri,

I had what could be the same problem. When I switched the preamp in, I would get lower signal strength (i.e. the preamp was behaving as an attenuator). The fix was to clean the contacts of the relay used to switch the preamp in and out. It has been a real long time, but I think the relay was located on the left side of the rig - schematic will tell you for sure.

Hope this helps.

5972. TS-450S/AT xmit problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-29 00:00:00 UTC
From: Jim McGhee <jmcghee@cyberramp.net>
Message-ID: <356E4FA4.578F@cyberramp.net>
Source record: 142536

Hi all,
I have two Kenwood TS450S/AT's that were struck by lightening I am in
the process of fixing. I have both to the point where the receiver
works, but when I press the 'send' button in, nothing happens.
The problem seems to be that the TXI (xmit inhibit) line from the cpu is
staying low when it should be high thus inhibiting xmit.
The service manual does not list what must happen before the cpu desides
its OK to xmit. I know valid ham freq must be tuned, but what else?
I'm stumpped.
Am I overlooking something obvious?

Thanks all,
Jim McGhee

A small point of information, the early radars e.g. CH (Chain home of
WWII vintage) were VHF, but more recent radars have been at 200MHz,
400MHz and 600MHz as well as microwave.

Note the frequencies given above are deliberately vague!

BTW what does the question (?) "so ...radar is microwave?" mean?

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment,
.homebrew,
and .space are for more specialized areas of ham radio: discussions
about
antennas, the older tube based amateur, military, and commercial gear,
commercially-made equipment, homebrewing, and amateur radio space
operations.
The .equipment group is not the place for buying or selling equipment;

that's
what rec.radio.swap is for

^^^^^^^^^^^^^^^^^^^^^^^^^
. Similarly, the .space group is specifically
about amateur radio in space, such as the OSCAR program and SAREX, the
Shuttle
Amateur Radio EXperiment; other groups cover other aspects of satellites
and
space. Homebrewing isn't about making your own alcoholic beverages at
home
(that's rec.crafts.brewing), but rather construction of radio and
electronic
equipment by the amateur experimenter. The .dx group is devoted to long
distance amateur communications.

Taken from the "Guide to the Rec.radio Newsgroups".

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both | Plectron and Motorola Alert Monitor receivers in June 1998 | Monitoring Times magazine. |

You can buy the proper replacement power cords but it's | much cheaper to drill a hole on the rear panel and solder |

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Collector Premium Quality Grid-Dip Meter made by James Millen Mfg. Co. Inc., Malden, MA., U.S.A. Model Number 90651.

Photo at:

http://www.geocities.com/Athens/Forum/3417/GRID-DIP.JPG

This unit is like new and is in amazing condition! See Photo. It even has the original box, packing and manual with it. One lucky person apparently sold a unit for $325 in this super condition and I have seen them for $65 as well in decent condition.

Candidly, this meter is priced for either a collector or someone who wishes to pay a premium to have one in new extraodrinary cond. in the original box and not the operator who just could use a meter. Again, similar models in lesser condition can be had for well under $100 if simple utilitly alone is the objective.

Will take best offer between $160 and $175. Due to the amazing condition of this unit cannot consider offers less than $160. This is a rare find. Will also consider some type of swap for a Hickok Navy or Air Force military 118 cardmatic tube tester.

Thank you.

ZENITH TRANS-OCEANIC 1955 - INFO PLZ!

I was closing out my Mom's house a couple of weeks ago, and ran across a radio that was my Dad's, a Zenith, All Transistor, Wave Magnet, Trans-Oceanic Radio, made in about 1955 - the radio appears to be in good condition, haven't been able to test it yet as I didn't have the size batteries needed on hand, but was wondering if such a piece has any value today? It seems to have all the info that it came with some type of a time booklet for all sorts of countries - many of which no longer exist under the name they were called in the 50's; it has a built in antenna in the handle; .can anyone tell me anything about this piece, value, etc.,
Thanks in advance for your assistance - please respond via e-mail.

Thanks again.

Beau

Could you share a little more detail on this J-pole? It sounds like it might be what I need. I have a HT capable of 5W, but I can't hit anything. I only have the helical that came with the radio. I was ready to hook up a 30W amp, but that seems like the wrong thing to do.

Source record: 142562

I replaced my 2020 stock mike with a smller higher quality Kenwood mike mode MC-43s.

I think its a little odd that one would compare he 2020 to an FT-100 which has 2m , 440, 6m & HF. On HF it has 100 watts. The 2020 is HF with 20 watts.

The Ft-100 will cost about $1500 and the 2020 is $600.

There is no similarity at all for a comparison (other than they are both radios).

5999. Help Motorola Syntor XX

Source record: 142565

I got my license (Tech-no code) and got a barely used ADI AT-201. This is a 2m 5W HT. I figured the HT would give me maximum flexibility; I could take it camping, driving, wherever. So I went up to my roof, which gives me line of sight all over Manhatten and couldn't hit a single repeater. I had programmed the repeaters into the memory channels, including the proper transmit offsets, earlier in the day. Now, I'm pretty sure that if I was hitting the repeater, I am supposed to hear a tone or noise or something after I switch back to receive.

Needless to say, I am frustrated. I really have no way to confirm that transmit even works. My first impulse was to buy the 2m 30W amp from radio shack, but that seems like the wrong way to go. Any suggestions here? Maybe a different antenna? I mean, I should be able to hit a repeater or two with 5W. Otherwise, why would anyone buy a HT?

On another note, I'm thinking of putting the 30W amp in my apartment and making some sort of base station for my HT. Any thoughts here would be appreciated.

Assume it's same as the garage door openers, a lot of these operate in
the 300-320 MHz area. You might try searching around there.

At a price - HT's are cute and all, but for any serious communication, you need a
mobile unit.

>could take it camping, driving, wherever. So I went up to my roof,
>which gives me line of sight all over Manhatten and couldn't hit a
>single repeater.

Get a repeater list from a local ham club, or off the Internet somewhere.
Some repeaters use PL tones, so you may have to program some tones into the HT.

>Now, I'm pretty sure that if I was hitting the repeater, I am supposed
>to hear a tone or noise or something after I switch back to receive.

You'll hear a courtesy tone after your transmit, normally.

>Needless to say, I am frustrated. I really have no way to confirm that
>transmit even works. My first impulse was to buy the 2m 30W amp from

Don't. Get a 2m mobile (used or new). Grab a power supply (it plugs into your wall,
then has some leads for hooking up a mobile), and probably somewhere in your area is
a "for sale" net. People post all their forsale stuff there. Listen and find a
decent mobile unit, or buy a new one.

Your BEST BET all around is to join a local Ham club. Ask questions, make friends,
etc.

>On another note, I'm thinking of putting the 30W amp in my apartment and
>making some sort of base station for my HT. Any thoughts here would be
>appreciated.

See above. I did the "HT everywhere" thing and found it crappy at best.
Mobile sounds better and has more power.

6007. Power supply rating

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-29 00:00:00 UTC
From: Rodney Isom <rodneyi@mindspring.com>
Message-ID: <6kmrn0ngj1@camel0.mindspring.com>
Source record: 142571

Got a technical question:

I have a pretty good understanding of electronics theory, but I don't think I have a good grasp of the PEP (Peak Envelope Power) concept. For instance, if I have a SSB/CW transceiver with a power output of 200W PEP, what would be the recommended current rating of a power supply for the rig & how do you go about figuring it out?

Thanks for the help,

Rodney

Hi Peter,

I would definitely make sure the transmit is working before you buy anything else -- I think you should at least be able to bring up some repeaters in such a densely populated area. Find another ham or someone with a scanner to check out your xmit. If that's not possible, go to radio shack & see if they might be willing to turn on one of their scanners in the store & just confirm that your radio is working OK. There is no substitute for other hams to help you out, though, especially when you're just starting out.

Also, you should definitely be able to hear activity on at least some of the repeaters in your area if your radio is working properly...

Good luck,

Rodney - KF4COV

Message-ID: <356EF59F.2A5E84C8@yahoo.com>
Source record: 142573

Without being a techno dork, here's the basic jist of it:

First This depends on the voltage required by the transceiver.

So, let us assume 13.8V required by the transmitter.
Typical efficiency of a transmitter in class AB service (typical
of SSB) is between 40% and 60%.
Let's take the "safe" route and assume a mere 40% efficiency.

So, if the transmitter output is 200W, the input is 500W (again,
gross assumption of 40% efficiency).

P=V*I

500W=13.8V*I

Solving for I, you'd need about 36 amps of current at 13.8Volts to
power that new radio. Of course, the 36 amp rating is peak current
required to develop 200W of output power. SSB does not normally
require this current continuously, only on peaks.
So a power supply capable of handling 36 amps at IACS would work.

Ok techno dorks -- it's all yours. Flame retardant suit is in place!

>Mobile sounds better and has more power.

It's true that the mobile units have more power. However, depending how densely populated your area is, and what the RF environment is like, and where your local repeaters are located, I would dispute the claim that a mobile will always sound better.

For example, where I work (Fremont, CA), there's a 2m/440 repeater located on a tower 400' above ground level on the side of a hill. I can reach that repeater with a full quieting signal on 500 mW from my HT.

In areas where repeaters are less plentiful, and/or the terrain does not provide as good of a line of sight, a mobile rig will give a substantial advantage over an HT. But I don't believe it always will.

(Of course, there's also the fact that with an HT, you're not restricted to operating just in your car, at home, etc...but that's a different issue entirely.)

Matthew

Usually no tone but that may depend on how the repeater is set up..... did you also set the pl tones for the repeaters (given the population density there I would bet that they use a pl and tone squelch) ? If you have a repeater directory it should note the proper tones to use.

>

Depending on the physical location of the repeater antenna you should be able to hit quite a few.... I can "key up" a repeater 25 miles away from my living room with the ht but can't hit another 11 miles away...

Email me if I can be of any help.....

You bring up a good point. Thinking of the original post, he could see the whole city from his rooftop? Maybe an HT would be ok at that altitude...

In my area though, for my particular situation, a HT was handy and portable, but came under scrutiny when accessing a repeater. I'm on ground level, and lots of trees and other buildings are between myself the the repeaters.
The signal sounded weak and poor, and frequently people would proclaim: "You on a HT?!"

>For example, where I work (Fremont, CA), there's a 2m/440 repeater located

I'm looking for opinions -
I have another question to add:

Is the MIT Flea a good place to acquire a used HT ? How about for a TNC?

And also:
What's the fabrication/marketting cycle like for the major HT
manufacturers? Do ICOM and Kenwood adhere to a particular annual cycle
for the release of new radios or what kind of cycle if any?

How's the third market for HT accessories?

I'm wondering if I should wait for the next MIT Flea (6/21) or buy a used
rig some other way or buy a new rig. Right now, in new HT's, I'm looking
at either the ICOM W32A or the Kenwood TH-G71A

Source record: 142587

I am going to be in the position to buy an HF rig very soon. I am stuck between the Yaesu FT-847 and the FT-920. My first question is: Am I right in saying that the 847 does NOT have a built in antenna tuner? OK, now that I've asked that, I can ask this: If I buy a vertical, I will not need a tuner, right?
I ask that because I am also not sure if I am going to have anough room to hang a dipole for 40 on down... I may HAVE to buy a vertical... and in that case I think I would just buy the 847.

Well, if anyone has any suggestions reguarding these choices, please let me know.

Thanks!

From: radiofreq0@aol.com
Message-ID: <1998052922503100.SAA13316@ladder01.news.aol.com>
Source record: 142600

I have an opportunuty to buy a FT900CAT w/ CW filter.
I will put in the other SSB as well.
Should I wait for the FT100?
Is my IC735 just as good?
Granted it has no auto tuner and no seperating fronpanel. In terms of pure HF
Rx performance is the FT900CAT as good as itgets for mobiule/portable use.?
Is the IC706MKII good as needed for moblie use?
Or do the lesser selectivcity and rejection problems of ther 706MKII make the
FT900CAT the ultimate? How about the DX70TH????
Shoiuld jusdt make my 735 work in my small car?

Depends on the dealer.....AES (Amateur Electronic Supply) has a ten day replacement deal...if it fails within ten days of purchase, you can send it back (on your own dime, unfortunately....since the dealer has no control over radio failures)...and they will check it out, confirm the problem, and either fix it or replace it, whichever is easier.....73.....Jared

Source record: 142604

The FT100 isn't out yet, so who knows what it will or will not do.

The 735 was a bullet-proof rig service wise. I have used one mobile and fix several years ago. It was very good. I think the used ones on today's market are over priced, however. After all, the 735 is a couple of generations old.

You didn't mention it, but the 728/729 might be worth looking at. Very quiet receivers and small foot print.

The world is overrun with used 706s and even a few 706 MkIIs. I have been giving deep consideration to a MKII for my travel trailer. The ones I hear on the air sound good. Just realize, they are menu driven and take a little time to get used to. But, if you get along with any modern full featured HT or GPS, you will do fine with the 706. Also you get 2 meters on it.

The FT 900 is about to go out of production, if it hasn't already. Good rig, but I don't think the Collins filters are all they are cracked up to be. What do you need CAT mobile for?

One of the magazines (QST I think) did a review of the Alinco and said it was a good beginner's or backup rig. I think this means it is lacking something.

Just remember, none of the small rigs will be an FT-1000, but most will do quite well - even for home use. You can always hook them to a large external speaker and improve the receive audio immensely.

You need to go to a real ham radio store and sit infront of these rigs for several hours and compare them.

My personal recommendation would be: If size is not a problem - continue using the 735. If size is a problem - go for the 706 MkII. If you want an automatic antenna tuner - look at the SGC stuff.

SPECIFICATIONS

THIS RADIO IS NEW AND HAS NEVER BEEN USED!

GENERAL
a.. Frequency Coverage (Rx and Tx)*:
146-174 MHz
b.. Channel spacing: 25 kHz, 30 kHz (12.5 kHz for narrow type)
c.. Mode: 16K0F3E (8K50F3E for narrow type)
d.. Usable Temperature Range: -25°C to +55°C; -22°F to +140°F
e.. Dimensions (with BP-160): 65(W) x 290(H) x 38(D) mm; 2.56(W) x 11.41(H) x 1.5(D) in
f.. Weight: 365 g; 12.9 oz

TRANSMITTER
a.. Output power (12 V):
High: 4 W
Low: 1 W
b.. Spurious emissions: -70 dB (0.25 µW)
c.. Frequency stability: ±0.0005%

RECEIVER
a.. Sensitivity (for 12 dB SINAD): 0.35 µV
b.. Adjacent channel selectivity: -70 dB (-60 dB for narrow type)
c.. Spurious rejection: -70 dB
d.. Image rejection: -70 dB
e.. Audio Output Power: 350 mW typical at 10% distortion
f.. Current consumption:
Receive: 70 mA (standby); 300 mA (max. audio)
Transmit: 2.5 A (4 W); 1.0 A (1 W)

Comes with:
a.. BP-160 BATTERY PACK: Voltage: 7.2 V; Capacity: 700 mAh; Output power: 2 W; Charging period: 60 min.(w/BP-79+AD-28) 13 hr.(w/AD-54)
b.. BP-174 BATTERY PACK: Voltage: 12 V; Capacity: 600 mAh; Output power: 4 W; Charging period: 90 min.(w/BP-79+AD-28) 11 hr.(w/AD-54)
c.. Programming Cable
d.. Programming Software
e.. User manual
f.. Original box

has them on special for $229. You may need a diplexer or two
depending on your antenna array, but that price is better than alot of
them I've seen in the newsgroups. I bought one, using it on a mv-3a
with 10 & 20 meters loads. It went from the top of 40 m to 6 meters!
I like it!! Don't waste the $50 for the opc-599. Assuming you can
get the 13 pin male and the 5pin female din plugs, you could make your
own cable and probably save yourself $30!!

Peter,
The repeaters might require a subaudible (ctcss) tone for access. Try
calling a ham store or local club for help. A ARRL repeater will also have
that info.

A friend of mine bought one. Mike Burton N6KZB. We ran it through extensive battery of tests on all bands. It failed miserably. It is now back at the factory. If it comes back OK and in proper working order he says he will keep it. If not he wants a refund.
In my opinion, having played with it, I wouldnt buy one on a bet.

Gee I thought S CA went the 500 Khz not 600 Khz split...but if they
had stayed with a NATIONAL standard, the Kenwood would be happy..

I had the same problem with the 220 band module...below 223.90 the rptr
offset TURNS OFF so I have to manually turn it back on for ANY rptr
below that....but one click of the up/dwn buttons and its back to
simplex!!!! ARGH!!! Kenwood was no help and does not plan to
change it! Thats what we get for wonderful bandplanning...

(PS I am in favor of a wider split on 6 like 1.6....but the 1.7 split
seems to be taking hold...though it wastes channels...)

I suspect those two may be misprint....besides the 441 with a -5
offset is ILLEGAL under Part 97....a rptr cannot have an input OR
output in the 435-438 Mhz range (or the 431-433 range for that matter!)

I've got an EDX-2 that I'd like to use with a non-Alinco radio (I'll be getting the DX-70TH soon though!), and I have a couple of questions. I know some may seem stupid, but such is life. I'll freely admit my ignorance, if it will spare me flame-mail.

1) The control cable has four wires: +13.8v, gnd, start and key. What are start and key used for?

2) My radio can generate carrier for tuning (CW); will the EDX-2 tune from that alone, or is there something else that it needs?

3) Is there some way to rig an external indicator to tell me that the tuner has tuned the antenna? (is this what the "start" line is for? can I hook an LED or something to it?)

Thanks for your time and patience with these questions. I appreciate it.

-Steve

> Does anyone know if it is possible to make a speaker/mic plug for the Yaesu FT-50 from any readily available plug? It seems that I saw info on how to do it somewhere on the net, but after an hour of searching I am unable to find this info. Any and all suggestions would be greatly appreciated.
>
> 73
> Jeff

I don't know about a speaker/mic plug, but I did make an earphone out of a standard Radio Shack earphone. I used an extremely fine file and carfully cut a second notch that divided the plug sleeve (the large section) in half and filled the void with epoxy. After 24 hours I filed it smooth and it works fine. A word of warning though- If it doesn't fit perfectly, don't force it or you will be sending it back to Yaesu for a new sp/mic jack.

In that case, I have an "original" too, except it has bencher paddles on it and a bencher spring and bencher posts and a bencher base...but the wiring was used on a Vibroplex (grin).

Folks,
Does anyone have any opinion of the Comet SMA-3 vs. the Diamond SRH-519
for use on a Yaesu FT-50?

Also, I ordered a new owners manual from them and there is a postcard size
paper insert that has a warning about using some aftermarket antennas that
don't have some part recessed and can damage the sma connector on the radio.
Anyone know what they are talking about?

6079. New duplexer

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-30 00:00:00 UTC
From: gauger@dsuper.net
Message-ID: <357045be.11176881@news.dsuper.net>
Source record: 142436

Hi everyone,

I just installed my new VHF-UHF amateur transceiver in my car, and looking
for installing a mobile antenna to operate these two amateur bands. Since
I am living in a large city (Montreal), an amateur antenna is attractive
for thieves, saying them there is a radio waiting for stealing in this car.
I was thinking about using the car radio antenna (a 32" whip) as a VHF-UHF
antenna. I made a test by cutting the whip to 19" to get 1/4 wave on VHF
and 3/4 wave on UHF. I connected my transceiver directly on it and it
worked fine! SWR readings were acceptable on both bands. The gain is
limited but just ok for my everyday needs. The FM broadcast reception is a
bit less sensitive, but this is not a problem for me.

Now I want to use the car radio and the thansceiver simultaneously, on the
car radio antenna. I would need for this purpose a device that would
separate these 2 signals: a kind of duplexer or a directional coupler. The
duplexer would have the following specs:

Car radio side: low-pass filter, cutting at 108 Mhz, high impedance coax
line (200 ohms I think?)

transceiver side: high-pass filter, cutting at 140 Mhz (no attenuation on
146 and 440 MHz bands), 50 ohms.

I would appreciate to have your ideas or comments on this subject. Is
there a commercial duplexer or directional coupler for this purpose? what
is the make and model? Did someone try this before?

Please send me your messages by e-mail to: ddufault@dsuper.net

Thanking you in advance, Daniel VE2BAP

This is probably a no no on this group, but since most hams are also into computers nowadays, what better forum to find something I want. Some years back, external 3.5" 1.44 meg floppy drives that worked off the printer port were quite common and usually used with lap/tops of older vintages. Does anybody know where I might look on the web to buy one of those drives that might be hiding in somebodys closet collecting dust???.

Maybe the repeaters are closed repeaters meaning that you would have to
transmit
the properCTCSS(PL) to access the repeater.

Well, I thought I might have judged Burt wrong with my quick reply. I thought to myself "Well, just read what he has to say. Maybe I might have been wrong. Maybe he actually has something productive to say about amateur radio. Maybe he actually might be a decent guy. " NAAAAAA! Again stated...WHO CARES?!

Matt...(and Burt for that matter)...I frankly get tired of Burts cross-posted trolling BS (might I remind you about the recent hams and guns cross-posted "series" that had absolutely nothing to do with the NG's that it was posted on.) Yea, you can say I'm having my fun...browsing these great newsgroups(don't you enjoy it?). I enjoy reading ham related postings and articles. I don't like being subjected to spam, stupidity, and Burt's trollings. Don't get me wrong, Burt has the absolute right to say anything he wants. BUT, I also have the same right to say what I feel also. Matt, it's not the power...it's the "right"...a God-given right and guaranteed by the Bill of Rights. I assume the UK has something simular. There is an old saying..."your right to double up your fist ends at the tip of my nose". I know I am not the only person that has been offended by Burt's crap. As a ham...if you enjoy being slammed by Burt...more power to ya. Me...I'm going to speak out when I get slammed.

I have a Kenwood TL-922A with 10 meters. It also has the AG6K mods so it is full QSK (quiet). The mods are fully documented. Spare 3-500Z and spare Jennings relay (the RF switching relay for QSK). Have both Operator manual and a copy of the Service manual. Prefer pickup in the New York City area, will drive some reasonable distance to meet. $1,000.

PERFECT FOR THAT NEXT HAMFEST OR SUMMER VACATION.

One of Kenwood's better HT's. The TH-225A is rugged and reliable.
This one is in MINT (like new) condition with an extra battery
and a desktop drop in rapid charger. Includes a like-new speaker
mic.

Has 10 programmable channels, scan, power saver, CTSS and most
of the other stuff found on current HT. DTMF, of course, too.

You will not be disappointed if you are looking for a fine HT that
will provide you years of easy to use service.

$145 plus shipping.

Thanks for reading,

Source record: 142459

Yes you can modify the 756 for full frequency coverage.

With a step by step color photos showing the modifictions.
If you have any surface mount soldering and desoldering experience , then
it should be no problem. These are micro-components that you will be working
with and you will need a large magnifying lens to view the work under.If NOT, I
recommend using the manual with photos and diagrams ..I can send you this
information on disk or paper. I also perform these upgrades a for $50.00.
The disk or manual costs $10.00 US....Do you have a web browser ? If so, what
Kind ex: Netscape , Explorer, AOL ?

email me for additional information.

I want to second the comment on getting old QSTs to read. I recently bought 3 boxes of them from the 60's, 70's and 80.s. What I found to be absolutely fascinating is that the hams were arguing about THE EXACT SAME STUFF THEY ARE NOW! There has been virtually no progress on any issues. It puts everything into perspective.

Here's my ham rules...based on reading old QST magazines.

Don't take anything personally. The newbie of the 60's is now the old fart of the 90's. They survived it, so can you.

Code is a rite of passage. Always has been and probably always will. At least until the law changes many years into the future.

Laugh at the people who rail so vehemently about all the hot radio issues. Nothing new has come up in over 30 years including band loss threats except for some tinkering with license classes. .

There are great clubs out there to join. I belong to two clubs. One is local. Mostly stuffy guys which is surprising since most of them are no-code techs...The other club is a younger, much more active bunch that love to get out and do things. Guess which one I spend more time with.

I found that ADI's AT-600 is quite tough (it was many features too).
I dropped to asphalt from bicycle more than two times, but it still
works perfectly although I see a bunch of scratches. If you carry
this outside, make sure you have some sort of case (and if you will
drop). The external body isn't as hard as HTX-202, for example.

There are some topics I have no interest in that appear in this group. I can't seem to get my filters to work, even though they are set up (maybe correctly). Anyone have any ideas?

Thanks, Bill W2BLC

I have an R7. I have never had an antenna with so many trap problems.
Over the last several years I have replaced all the traps at leasst 3
times! Still it is impossible to tune properly. I have it mounted on the
roof on a tripod mount. My opinion.....forget it.

6118. Re: Lithium AA's vs. Alkaline AA's

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-30 00:00:00 UTC
From: "Michael K. Davis" <zilch0@primenet.com>
Message-ID: <6kqfs5$ipd@nntp02.primenet.com>
Source record: 142475

To honor a request, here's an ASCII only table of the information
contained within the .XLS file I posted at the top of this thread.
It lacks the plotted curve contained in the spreadsheet.

OK, here's the data without the plotted points and trendline curve:

Energizer® AA Alkalines (E91 Zn/Mn02)
vs. Energizer® AA Lithiums (L91 Li/FeS2)

Continuous Current Drain (mA)	Alkaline Duration to 0.90 V (hours)	Lithium Duration to 0.90 V (hours)	Lithium Performance Advantage (factor)
0.3	8700	8700	1.00
30	72.00	83.00	1.15
100	19.50	25.00	1.28
125	12.00	17.50	1.46
250	5.90	8.75	1.48
300	4.50	8.20	1.82
500	2.25	4.83	2.15
750	1.00	3.17	3.17
1000	0.40	2.00	5.00
1100	0.30	1.66	5.53
1250	0.23	1.58	7.04
1500	0.08	0.90	11.25

If the specifications for a device give Watts instead of mA, use:
Watts * 1000 / Volts = mA
where Volts is the sum for all batteries in series.
For example, 0.75 Watts @ 6 Volts (four AA's) is equivalent to 125 mA.

Surprise! The performance of Lithium AA's increases relative to Alkaline
AA's as the current requirements of the device increases! For example,
Lithiums can last more than 9 timeslonger than Alkalines in high drain
devices pulling 1400 mA, but not quite twice as long in devices drawing
only 400 mA.

If longevity is your only criteria for choosing between Alkaline AA's and
Lithium AA's, Lithium AA's are the obvious choice for all applications
with current requirements at or above about 25 mA.

If cost is to be fully considered however, you should divide your cost for
Lithium AA's by your cost for an equal number of high quality Alkaline
AA's to determine your cost ratio. Then, knowing the load of your
device, use the above table to find the performance ratio had at that
number of milliamps. If the performance ratio exceeds your calculated

cost ratio, buy Lithiums instead of Alkalines.

Lithiums offer other advantages that might deserve consideration: A weight of 15 grams vs. Alkaline's 23 grams, a shelf life of 10 years vs. 5 years, a higher initial voltage of 1.8 volts vs. 1.6 volts, and superior performance at low temperatures.

This document (the spreadsheet) was not produced by Eveready Battery Company, Inc. It is an original creation. It correlates independent performance data which was extrapolated from curves plotted in datasheets provided by Eveready Battery Co., Inc. I requested these data sheets from Eveready Customer Service in January, 1998, so I consider the data to be current, but there is some inaccuracy inherent to my having obtained the numeric values by extrapolating the x-y coordinates associated with points on a curve. In other words, I can not guarantee the accuracy of this data.

Datasheets: Energizer L91 datasheet, Form No. BE 381
Energizer E91 datasheet, Form No. EPS

6119. FT-50RD - Any new software mods?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-30 00:00:00 UTC
From: bg683@scn.org
Message-ID: <EtqzzF.G5E@scn.org>
Source record: 142476

I've been successful in performing the software freeband mod on two FT-50s using the ADMS 1C v1.05 software. However, I just encountered a new FT-50, S/N 7L23XXXX, which won't accept the mod.

It appears Yaesu has changed the radio again. Does anyone know if I can mod this new radio using either the old hardware mod or a new software mod?

Please advise.
DJP

You did not specifically mention that you programmed in the proper
PL tones for each repeater. Without them you could be standing next
to the repeater, and it wouldn't work. Many repeaters, in their ID,
tell you exactly what tone the repeater uses, or scan the web or the
ARRL repeater directory. That's my guess. Good luck and welcome to
amateur radio. K2gt

For Sale: Very nice Timewave DSP-59+ in excellent, like new condition.
Works great! An excellent station accessory for anyone plagued by
hetrodynes (makes them disappear -- try it on 40 meter SSB at night!), QRN,
or crowded bands. Great for DX'ing and contesting.

Included are all cables, manual, and original box.

Selling for $180. I will pay shipping and insurance for any destination in
the continental USA.

E-mail Steve at STEVE.W3SY@EROLS.COM

Thanks and 73....
Steve

Does Svetlana even make a 3CX800A? Maybe this amps uses a 4CX800.

6129. New Ham Needs Help With TS-520S Questions.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-30 00:00:00 UTC
From: Dave Morrow <dmorrow@lightspeed.net>
Message-ID: <356FB1C8.3D445CF2@lightspeed.net>
Source record: 142486

I've been a Tech + for a while now. Just purchased my first HF radio. I got a good deal on a real clean Kenwood TS-520s. My question has to do with the matching antenna tuner. I believe there was a matching antenna tuner for this radio (AT-520 perhaps?). From a functionality standpoint, is it better to try and find the matching tuner to go with the radio or would it be better to go with a newer unit from MFJ or whoever? What is the model number of the antenna tuner that goes with the TS-520s? Does anyone have one they want to sell?

Thanks for any and all comments.
Dave

I once dropped a Standard UHF HT from the top of the LASH crane aboard S/S American Kestrel to the deck, a fall of about 70 feet. Case cracked, but still worked. Repairs were made with a foot of duct tape. I witnessed the old man on my present ship drop his Motorola UHF HT from the bridge wing to the dock, again a fall of about 70 feet. Case cracked and warped so badly the mic key was inoperative, but still worked fine. A lillte surgery and some superglue and it was all but cosmetically as good as new. I dropped an identical unit into a ballast tank full of seawater where it remained for about 6 hours. Once it was rinsed and dried and the battery recharged, it worked as good as it ever did.

It is amazing what some of the commercial gear can take, and appalling at how little some of our ham gear can stand. I don't DARE pack my TS-50S in checked baggage when I fly out to meet my ship. It goes in my briefcase and I am mighty careful with the briefcase. Best advice for FT/IC/TH/ETC owners is... don't drop them. wear them in a secure pouch and use a lapel speaker mic rather than pull out the rig.

If you're having a problem inadvertently hitting functions when using
the MH39, you'll *really* have a problem with the FS-10. I use the
MH39 on my 8500 because it is difficult to avoid accidently hitting
functions on the FS-10 while just handling the microphone.

I've bought many batteries from W&W Associates(AKA batteries are us, and
battery-tech).
Their prices are within reason, and the quality is at least adequate.
They also make a rather good universal batery pack charger.

>
>Bob Weiss N2IXK

In the US political lexicon, "Liberal" has come to mean state/corporate control of the individual for the benefit of a state/corporate agenda. It is a synonym for Big Brother. This is very different from the classical meaning of the term.

Similarly, in the US political lexicon, "Conservative" has come to mean freedom from state/corporate control of the individual (except, unfortunately, in matters of sex and religion). Again this is very different from the classical meaning.

In classical terms, a conservative is a defender of the status quo, of the tried and true, while a liberal is open to new ideas and new ways of dealing with situations. In that respect, the Founding Fathers were flaming liberals. After 200 years, defenders of the Founding Fathers' ideals are conservatives since they wish to defend these now tried and true ideas against the encroachments of the statists.

This inversion of language tends to make these sorts of political namecalling matches confusing at best. Newspeak rules. Black is white, and white is black. The modern liberal is really a fascist/communist/statist/corporate manipulator of the individual while the modern conservative is the defender of individual liberty and freedom from state/corporate control.

In reality, the state and the corporation are the same sorts of entities. They are both heirarchical wielders of power, intent on preserving and expanding their influence, control, and dominance. The satirical press release now making the rounds which announces that Microsoft has detonated a nuclear device is not far from the mark. Corporations now do behave as states in their own right in many ways (though generally not yet to the extent of blatant use of their own private armed forces, but there have been cases of that).

So true. Audio delay can make a signal sound louder, but it usually doesn't add
at all to intelligibility. It often makes it worse.

> If you are an experimenter, I'd build and play with various audio

Adding audio gating can make a dramatic improvement in processed audio.
Audio clippers should generally be "soft" clippers, and the gating should be
soft as well. Otherwise, you add so many distortion products that intelligibility
is impaired. (RF clipping sidesteps this by putting most of the higher order
distortion products out of the passband.) Dolby-like companding can also be
used to advantage, if used at both ends. This is a worthwhile area for experimentation.

Then it is time to learn how. It isn't difficult. It just requires learning a few simple techniques. Watchmakers have been working on this scale for over three centuries, and jewelry makers for over two millenia. Many of the techniques they developed translate directly to work on SMD equipment (though SMT rework is generally *much* easier than either watch or jewelry repair).

IMHO repairing modern radio equipment is easier than repairing older equipment. SMT rework is easier than rework of equipment using through hole or tiepoint technology. And troubleshooting is simplified due to VLSI so that generally you only have to work at the functional level. VLSI tends to encapsulate entire functions into single components, so you rarely have to descend to the discrete circuit level when troubleshooting, IE you don't have to care which of the several thousand transistors in a chip has failed, it is enough to know the functional block has failed. You have to replace the entire chip anyway.

>pop, pop, pop of ignition noise cuts right through the noise blanker.

The firing potential across the plug gap increases under load due to the
higher cylinder pressure. This higher potential requirement can lead to
"sideflashing" in the high tension circuit. I know you've replaced all the
likely suspects for sideflash, IE wires, cap, and rotor, but you may still
have routing problems which permit sideflash under load. Since this
only happens under load, the usual technique of observing the engine
in the dark to spot the sideflashes won't work. This can be a hard nut

to crack. You may have to experiment with wire routing to eliminate it (if this is in fact the problem).

The requirement for a greater potential build up before discharge under load also means the discharge waveform becomes sharper. This also increases radiated RF noise even if the HT system isn't sideflashing. Adding an additional resistive suppressor in the coil lead can help here by dampening this waveform. (Resistor plugs and wires help, but sometimes not enough, and an additional resistance needs to be added to deal with the problem.) If you add too much resistance, however, the engine will start to misfire.

Another possible source of ignition noise-like problems is the fuel injection system. The injectors are solenoids pulsed at the same rate as the ignition system. Often the wiring to the injector solenoids is neither shielded nor suppressed. Shielding and suppressing this wiring can sometimes eliminate the "ignition" noise. This is somewhat load sensitive because the duration of injector opening is increased at higher loads. That allows the solenoid coils to reach saturation, and the back EMF when they close becomes greater. Flyback diodes mounted directly on the injectors can help here. (There are already flyback diodes in the ECU, but they are separated from the injectors by the harness length, and this can become an antenna. Putting the diodes directly at the injectors short circuits this.)

If all else fails, trade the PU in for a diesel. :-(

This radio is *not* manufactured by Icom. It is manufactured for RS by
Maxon. It *is* similar in design to the old IC02AT, and was designed to
accept accessories from that radio line, but it isn't the same radio. It is
a very good radio. It has tight front end filtering, so it isn't bothered by
out of band signals the way many of the wide band scanner substitutes
are. It is *not* a scanner substitute. It is an amateur radio *only* rig.
(That's a plus, not a minus.)

From: David <davhayes@netcomuknospam.co.uk>
Message-ID: <01bd8bb7$8632e3c0$ace82ac2@ukpppdavhayes>
Source record: 142501

Can anybody out there help with a problem I have with a 757GXII.

It goes like this: when on FM and running anything other than full power (from five to ninety watts) the output power indication is jumping about all over the place, when put on an external power meter and the radio set for five watts the actual power output would surge upto 50-60 watts and back again, this happens all the time.

Giving the radio a tap on the back end stabilizes the problem for a little while.
If you can help or have had the same problem and rectified it, please let me know.

Many thanks and best 73s

Dave.....Sherwood Forest U.K

My FT50 has accidently been dropped a half dozen time and has not failed yet. I'll lay it on the seat of my truck while driving and when I get out it wants to follow me. Once I set it on the hood of the truck and a rain storm developed and I forgot about the FT50. The only problem I have found is the poor antenna that came standard with it.

6146. Re: ADI 600 Programming Software

Source record: 142503

>...ADI software...to program the 600...
>...worth the $40.?

My ADMS-1 software for the Yaseu FT-50RD and my commercial Vertex software for my VX-10 "look and feel" about the same as the new ADI software - and I sure appreciate the heck out of computer programmibility!

You will enjoy it. You can set up multiple data files for anything: trips, commutes, et al. Very functional - very easy to use. I have seen a couple of screen shots of the ADI software - it sure looks like they have a winner!

The ADMS-1 software package comes with the necessary cable. About forty bucks
at HRO or AES.

Tough, indeed. "Cracked" has some sort of chip on his shoulder regarding Yaseu products, and, by his post, cannot be trusted for objective information.

Alas, it is an economic fact of life. Few if any dealers will
exchange a radio that's been used for another new one.
That's because they can't resell the radio as new after it
is repaired (against the law), and their margins are too
small to allow them to eat the loss of having to resell it
as used. (Good dealers *will* exchange radios that are
dead right out of the box. After repair, those can legally
be resold as new.)

Most radio faillures are infant mortality failures and
occur in the first 90 days of use (when in that 90 days
is the luck of the draw). That's what the warranty is for.
Ideally, the manufacturer would eat the shipping cost
for warranty repairs, but again the economics of
the ham market doesn't make that feasible.

If hams weren't so determined to save the last nickel
on up front purchase cost, there would be enough margin
to allow better return and repair policies. But hams are
avid price shoppers, and that drives the way the market
works.

Unless you need to have all matching equipment it does not really
matter, however I would try to find an AT(xmatch) that has as heavy
as possible components especially the roller inductor. My personal
favorite is the Heathkit SA2060. If you are going to buy from MFJ get
the one with the highest power rating you can afford.

>obviously) method of getting what I want.

If you have any intention of operating 75m or 40m, I would strongly urge
you to consider a center loaded antenna rather than a base tuned whip.
Efficiency of the center loaded design will be much better. I'm using a
screwdriver antenna which eliminates the need for a tuner (the antenna
is the tuner in a sense). Bugcatchers are also good, though you have
to get out and move the coil tap to tune them. Least desirable of the
center loaded designs would be something like a Hustler, though that
will still work better than a base tuned whip.

For 20m and up, a base tuned design will suffice, but much cheaper
will be to use Hamsticks and just swap them for each band. Ideally,
you want the antenna to be as long as feasible. That's limited by the
clearance height. For interstates, that's 13.5 feet. So a bumper mounted
antenna can be longer than one mounted higher on the vehicle. I have
my screwdriver antenna mounted on a trailer hitch mount. GLA makes
a trailer hitch mount which pivots over when you pull a pin. This allows
you to operate the tailgate (or hatch in the case of a SUV). I highly
recomend this mount for pickups and SUVs.

This set is in perfect working condition, and includes the Kenwood external speaker. I have the original boxes and manuals. Although the cabinets are clean, some lettering has been worn off the front of both units, but can easily be replaced with rub-on lettering. The receiver is missing one of the lock-down buttons on the hinged lid. I've only owned them for a couple of months, but just found something else I want more (Kenwood TS-940). Will sell for $325 for the set. Will include a Kenwood MC-50 for $60 more.

No, I will not make copies of the manuals, but I will forward your request to the next owner.

Double-box packaging is included in the sale price, however, shipping is not.

ZIP CODE: 29577
WEIGHT: about 50 pounds, three boxes.

Source record: 142520

> I replaced my 2020 stock mike with a smller higher quality Kenwood >mike mode MC-43s.

I tried the Mc 43 and a Heil 5 on the 2020... from local to DX, there
wasn't that much difference...All reports were good for audio. In fact a
local didn't even notice I had changed to the Heil till I told him.

>I think its a little odd that one would compare he 2020 to an FT-100 >which has 2m , 440,
6m & HF. On HF it has 100 watts. The 2020 is HF >with 20 watts.

I didn't compare them, I said I'd keep the the 2020 till either the K2
or the FT 100 comes out.

What I'm looking for is a small package that works well on SSB and
CW...the 2020 is a little poor on the cw side for me. I hope the newer
units have a cystal filter over digital which would prob solve the
problems.

> There is no similarity at all for a comparison (other than they are >both radios).

But , if you wanted to compare them (not talking price) they both are
smaller package radios and are designed for the mobil type setup over
backpack/base station and cover hf.(yes, the ft100 will have more bands
and bells/whistles...more like a 706... but those bells+ are a low
importance to me as to great basic features/functions)
The K2 will have a low current use and the FT100 will prob be in the
range of the 706...the 2020 falls in between.
When more info is out on these units , then maybe a comparison!
Can't tell more till the units are released

73
Tom

PS For those that don't know abt the K2...check out;
www.elecraft.com
It's a LOW current draw CW/SSB kit from some of the top QRP buliders.
Basic unit is CW for all HF bands with options for SSB / built in tuner
/build in battery power...etc

6166. LOT SALE OF RADIO/TV TUBES ON EBAY

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-30 00:00:00 UTC
From: beauaa@aol.com
Message-ID: <1998053014134000.KAA19019@ladder03.news.aol.com>
Source record: 142523

So many folks were so kind to help me sort out a collection of radio/tv tubes my husband acquired that I wanted to let you know that I had decided to sell the "collection," and they are currently on the Ebay Auction on the WWW....here is the information should you be interested:

WOW! 325 RADIO & TV TUBES NOB LOT SALE WITH CASE!
NOW AT AUCTION ON EBAY
THE FOLLOWING URL TAKES YOU RIGHT TO THE PICTURE AND POST AREA
FOR THIS GREAT PIECE.
http://iguana.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewItem&item=15596285

325 RADIO & TV TUBES NEW IN ORIGINAL BOXES
I posted a note on the usenet new groups requesting insight and help regarding a collection of radio/tv tubes which I had acquired, and which I knew NOTHING about. ❒As I shared in my note to a usenet newsgroup, I was out of town and my husband who knows no more about tubes than I do, bought these while I was gone thinking I could do something with them! At the moment neither of us knows exactly what he thought I should do with them, as we are antique dealers who handle European antique furniture, ❒❒this will teach me to leave my husband alone again!!!!

I was amazed at the number of kind, helpful folks who e-mailed with information and suggestions, and who helped me decide what to do with this "collection," I had acquired and want to sell. Some suggested I review on line price lists, which I have, and I have done a sample of a few of the current prices some of these tubes are selling for.

THE RESERVE ON THIS COLLECTION IS NOT <BASED ON THESE PRICES, BUT MUCH MORE REASONABLE. A SAMPLE OF SOME OF THE TUBES AND THEIR CURRENT ON LINE PRICES ARE :
12BF - $3.00
12AT7 - $15.00
12AU6 - $3.00
6DR7 - $5.00
6J6A - $3.00
12AV7 - $4.00
12BL6 - $3.00
6BU8 - $5.00
6BQ5/EL84 - $15.00
6LQ6 - $35.00
6AV5GCA - $6.00
6LB6 - $25.00

6JB6A - $18.00
I think that is enough samples there were just too many to look up all the prices for each one

I understand, from some of the helpful gentlemen who wrote me , that these tubes are know as NOB, that is they are new in their boxes. They are also in a professional carrying case. I have counted and re-counted the collection, and there are approximately 325 plus tubes. You can see the vast number in the picture above.

The following is the list of tubes in the case.there may be some typos, but since none of this means anything to me, (that is none of it represents anything in my experience) it is impossible to proof the list. IF there is some specific number you need clarified, please let me know. Please DON'T ask me technical questions as I am not experienced in this field. Thanks.

Hash: SHA1

I can't speak for the FT-50, since I've never seen one in person, but I have
dropped my FT-470 dual bander on concrete and other hard surfaces on a number
of occasions and it still works.

In addition to the shocks, I once dropped it into SALT water (I lived for 5
years on a 42' sailboat) and it disappeared into the fluffy mud of the bottom
of
my slip. It took me almost 1/2 an hour to find it, with mask and snorkel and
my arms nearly shoulder deep in the mud under about 8 feet of salt water.

When I found it, I hosed off the muck and took it below decks where I opened
the
case and rinsed the whole thing out thoroughly with fresh water, then dried it
with a blow dryer.

The battery was toast, but the RADIO still worked and is in use to this day.

6168. TS930 Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-30 00:00:00 UTC
From: ac4uo@my-dejanews.com
Message-ID: <6knlif$s8c$1@nnrp1.dejanews.com>
Source record: 142621

I have a Kenwood 930 with problems, 1. I hear a tone when on CW, I don't think its the sidetone. 2. My audio is nasty on 20 meters only. Is there anyone that can help???
Thanks

Source record: 142622

Complete Icom 706 (HF + 6meter + 2meter) station. Options inclueded are: Speration cable, Mobile Mounting bracked(never used), SSB filter, Voice Synth module, SM8 Desk mic, 4 to 8 pin adapter for mic and a Mirage 310 power amp for 2 meters. This will give you 100watts on every band inculding 2 meters. Everything is in mint condition and less than a year old. Total price for everything is $950. Sorry but I do not want to trade as I need cash for my next radio and I will not split up the accesories.

6170. Re: Help with FT-8500 mute

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-30 00:00:00 UTC
From: enrich@aol.com
Message-ID: <1998053001135500.VAA25106@ladder03.news.aol.com>
Source record: 142623

Unfortunately with the 8500 you can't set it to mute one band while the other is receiving like you can with the Icom 2350. A major flaw with this rig in my opinion. you can only tell the radio to mute either VHF or UHF "all the time or not at all". The 2350 is great in that whichever band you choose as the Main band, the other is automatically muted, but with the press of the sub bands dial you get that bands audio and the other is muted.

I am cross-posting this to rec.photo.digital as it is particularly
relevant to digital cameras where AA alkalines seem to perform
particularly poorly and high-capacity AA NiMh rechargables are popular.

Actually, I think the "skirt" on the original antenna is part of the
moisture protection. So an O-ring seal might be more than cosmetic.
>

FS: One Kenwood TS 180S w/filters(CW, SSB) and WARC. Rig is cosmetically in good shape. Some scratches and a few chips on case but the face looks real good. Rig has normal output 160-10 except output is low on 12 & 17 meters. Needs adjustment. Everything else works perfectly. All digital & solid state. 4 memories Has copied manual, noise canceling mic & DC power cord. Will take $325.00 plus shipping. It is well worth the price!

I have for sale a mint TR-7A drake line, comprises following equipment:

- PS-7 power supply
- TR-7A HF transceiver (NB and filters factory installed)
- MS-7 external speaker
- RV-75 external synthesized VFO
- MN-2700 2 kW antenna tuner, balun option installed
- Drake desk-top microphone

Transceiver,speaker, microphone and VFO are like brand-new out of the box, not a scratch. No modifications were done, everything is in factory condition.
The MN-2700 ATU is a 9 on scale 1 to 10.

All equipment comes with its original Drake manual.
Will also include original Drake advertisement leaflets

$1900 plus shipping

6188. FS: Atwater Kent Type E3 Radio Speaker

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6krsoj$gt5$3@csu-b.csuohio.edu>
Source record: 142293

Atwater Kent Type E3 Radio Speaker. The unit's chassis appears to have the original paint job and the paint is in good faded shape for its age. Meaning the gold is not bright as it was when new. Of course there's some chips, etc., but overall I'd call it good. If you want perfect in every way, this unit is not for you, but if you're reasonable with expectations for something that was made in the 1920's--you can use it without repainting it as is. The two cloth covered leads appear to have the original pins on them. Two of the six brown felt pads are missing on the base (not a big deal at all and easily dealt with).

The negatives are that the cloth grill will need to be replaced as it is torn in one spot both front and back of the unit. Also the speaker will have to be re-coned at it is visibly torn from inspection through the cloth grill opening. That is all I can say about the unit, I do not have an A-K to plug it into to test it.

$100 plus shipping.

If you are usingf the ICOM T8A perhaps you can answer a few question about
the rig.
1.Is there an intermod problem
2.Is there a low bat. indicator/PL encoder
3.What are the pros/cons about your experience with the rig
4.How audio xmt/rx quality
5. Would you recommend this radio

6191. Q: Yaesu VX-1R power plug source?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: jdc@cci.com
Message-ID: <6krrj7$ih0@bmerhc5e.bnr.ca>
Source record: 142296

Where can one find the non-standard coax DC power connector
that the Yaesu VX-1R uses? I asked a fellow at the Yaesu booth
during the Rochester hamfest, but his only reply was to
purchase the car adapter for $35.

Any ideas? Are there any other gadgets out there that use the
same connector?

Wollensak 5730 Stereo Reel to Reel Portable tape recorder. Solid state commercial quality/duty model. It has nice quality of tone just from the internal speaker system. You can play it just like that. Handles the 7 inch reels, Has left and right record & VU meters, left and right tone/volume knobs, 3 spds, etc. The unit is in good operating and physical condition. Has optional black valise cover carrying case with attachments pocket.

My photos are underexposed, and the unit looks far better than the photos. You'll get an idea of what is looks like.

http:www.geocities.com/Athens/3417/WOLL5730.JPG

$100 plus shipping costs which won't be much as it is very compact for a full featured deck.

Near-mint condition- has been in original box in garage almost since new. Just got it from a divorce sale- now I found something else I want more. No manual, but I'll include a non-amplified D-104 microphone wired and tested. I've been using it for two weeks, and it works flawlessly. One small ding in front panel under meter face, about one-sixteenth of an inch wide. Rear panel still shiny, power cord as flexible as new. $400 firm plus shipping for this 9.8 out-of-ten example of Yaesu's great 101 series model line!

Shipping weight: 50-60 pounds (estimate)
Shipping zip-code: 29577

Write to: kr4wmNOSPAM@bigfoot.com

Don't forget to remove the NOSPAM before sending!

People:

I just bought a Yaesu FT-8500 mobile vhf...it doesn't quite fit comfortably in my car. I need to put the RF deck in the trunk, and use the remote feature to put the control head in my cabin.

Unfortunately, the cost of remote kits is too high...$65 for a length of cable and some connectors! Does anyone know how to build a remote cable for the FT-8500, or where I can get a non-Yaesu unit?

I've owned a FT-50R for 2 years...it was my first rig. Needless to say, I was pretty wreckless with it, taking the MIL spec advertising to heart. It was splashed numerous times, dropped on countless occasions onto every surface imaginable, and even run over by the front wheel of my lawn tractor! It worked fine through all this; in fact, the only thing that phased it was when I accidentally dropped it into a bird bath. I had to send it to yaesu, because the watertight seal on the antenna connector had broken and the LCD header connector had corroded.

Since then, it's given me lots more loyal service, including plenty more drops. I also work in the ambulance service...it takes quite a beating when I go on calls with it, as it's modified to work on the frequencies of our rigs.

I am constructing a cable to use with a BayPac modem with my FT-50R. The diagram in the owner's manual shows using a 2k resistor on the PTT wire, but the instructions included with the BayPac modem specifically say not to use a resistor. Could someone please tell me whether or not I should use the resistor. Many thanks in advance, hopefully I'll have my little packet station on the air soon =)

Source record: 142317

Hi,

I'm about to put up a Cushcraft R7000 and need some advise. I've been told that the masts from Rad. Shack won't be strong enought and they are the wrong size. What would be a good mast to use? I'd need about a 20 foot length. Someone suggested a pipe used for chain-link-fences work well.

Thanks for any help,
Mike

6213. Question on an Old Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: jeff hawkins <jwhawk@ix.netcom.com>
Message-ID: <6ksebl$c34@dfw-ixnews5.ix.netcom.com>
Source record: 142318

I listen to a bit of SW, mainly the "Biggies" for the news/informational aspects (BBC, Russia, Cuba etc,).

I recently unearthed the SW radio I had a kid many years ago. It's a Realistic DX-120. It seems to be in working order except that it needs some work like fixing the tuning knob and a new speaker.

I had two questions (1) where could I take it to get it repaired and (2) Is there any place I could get an owners manual or specs about this receiver.

Thanks for any info.

Hi!, all.
I have a TH-5 for sale in pristine condition, with boxes and manual.
The antenna is down in Scarborough (Toronto) and I've left it assembled so
you can see it all together.
I used it for about a year or so.
Price: $ 450 canadian (oh, yes and remember, no taxes) :-)

My e-mail is: emontana@interlog.com
Txs, all.

>would it be better to go with a newer unit from MFJ or whoever? What is
>the model number of the antenna tuner that goes with the TS-520s? Does
>anyone have one they want to sell?
>
The model number of the matching antenna tuner for the TS-520S is:
AT-200 (I have one, and no I will not sell it). From a functional
standpoint, it makes no difference whether you use this antenna tuner or
any other tuner. The AT-200 just looks a little prettier next to the
TS-520S.

6222. FT-920 no longer works with computer

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: Lawrence Ober <leo@jove.com>
Message-ID: <6ksk3e$24f@sjx-ixn6.ix.netcom.com>
Source record: 142327

I have an FT-920 and Log-EQF logging software. Up until now I've been able to use the CAT serial port on the FT-920 to automatically read frequency and mode data into Log-EQF. I plugged in the computer for a session and now the radio/computer connection is dead.

This happened once before and reloading Log-EQF did the trick. This time it did not help. I also tried another computer and a different serial cable to no avail. Has anyone experienced similar problems with this radio?

>paper insert that has a warning about using some aftermarket antennas that
>don't have some part recessed and can damage the sma connector on the radio.
>Anyone know what they are talking about?

To prevent excessive bending stress on the SMA connector's mounting in the case, you need the antenna to put a "shoulder" down against the case when it is screwed down. This absorbs some of the bending stress and helps prevent ripping the SMA connector out of the radio. Most SMA antennas provide this collar. In some cases you may need to add a small O-ring to close the gap and provide this collar. You can look at this as the male SMA of the antenna being recessed into the antenna to create this load bearing collar.

Where you really can get into trouble with SMA connectors is if you use a SMA-BNC adaptor. That has no collar, and puts all the bending stress on the SMA flange mount to the case. It can easily allow the SMA to be ripped out of the radio.

This is a mechanical problem, not an electrical one.

Just for interest the IC-T8 has a full dicast Al chassis I've dropped it heaps from pockets and off the bench but I do have the soft case to protect it. I go for Al chassis as they might make it heavy but give it strength.
My Mitsubishi analogue phone is built with the same construction its been off the bike at over 100MPH twice and once in a 100MPH accident its got half the case missing but still works fine I thinks its over 8 years old now!

Cheers
ERIC.

6227. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6kqq5k$i74@news.Hawaii.Edu>
Source record: 142332
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Lots of open repeaters use CTCSS tones as well. When I lived in Chicago, CTCSS tones on repeaters were pretty much mandatory; Chicago was a sufficiently RF-dense environment that a repeater that did not use a CTCSS tone would be rendered pretty much useless from RFI.

One of the repeaters here (Fremont, CA) is an open repeater that pretty much only has a CTCSS tone enabled to weed out the clueless people who go to Radio Shack or Fry's (local geek store chain), buy a rig, possibly get a license, and then get on the air with no clue how to use a repeater. Sort of a crude anti-lid filter.

I would agree, though - if a ham in a densely-populated area could not hit at least one repeater from an HT, CTCSS tones would be the first thing I'd double check as well.

Is that the one with the little adjustable contacts, and the magnet which holds the battery on? If so, I'd be curious to hear about any experiences people have had with that. I've seen what appears to be the same charger sold under 3 or 4 brand names (W&W, Maha, and a couple of different generics). How well do those actually work? I've been trying to decide if that would be a reasonable alternative to buying the KSC-14 charger from Kenwood for 2x the price.

Comments?

I would probably not suggest an HT like this for a primary radio. It's a
handy one to have as a backup to a 'heftier' HT (something to throw in your
glove box, for example), but not really a good primary radio. Also, you
definitely don't want to run any HT primarily off of batteries, unless you
either:

a) are close enough to your local repeaters that you can use very low power
and still get a solid signal, or
b) don't mind changing batteries every couple of hours.

The latter gets expensive REALLY fast. I have an AA battery pack for my
Kenwood, but it's loaded with the Energizer AA Lithium batteries, and is
used ONLY in the very rare cases (such as parade communications and whatnot)
where I manage to exhaust both of my NiCad batteries.

For what it's worth, I'd take into account the fact that you prolly don't
need to buy an HT that often, and I'd spend a little extra money to get a
good, solid one. If cost is a significant issue, I'd suggest identifying
whether most of your local repeaters are 2M or 70cm, and based on that
buying a good solid mono-bander HT for that band. (Such as the Alinco
DJ-191T for 2M. If most of your local repeaters are on 70cm, a dual-bander
(Alinco DJ-G5T, Kenwood TH-79, or Standard C510, for example) might end up
being smarter, as 70cm single-band HTs tend to be a bit pricey.

>more. And maybe I need a decoder and a carrying case too. <sigh> And I don't
>even know the frequency pair the local repeater(s?) uses.

I'd strongly suggest getting a copy of the ARRL Repeater Directory. It's not
expensive ($8), and it is very comprehensive. Then, listen on the repeaters
listed for your area, and see what the "flavor" of those repeaters is like.
If you belong to a local ham club, I'd encourage asking them for recommendations
as well.

>Maybe I should stick with 20M QRP CW but I thought it might be
>friendly and sociable to meet the local hams (none of whom I know) on the
>repeater(s?).

Depends. Some repeaters are really friendly, others have nothing but a group
of 4 or 5 friends who talk to each other all the time and never talk to

anyone else. It's best to listen, ask around, and find a repeater whose people and atmosphere you like.

Good luck!

/MC

>Seems by the time I get all the accessories it's not very inexpensive any
>more. And maybe I need a decoder and a carrying case too. <sigh> And I don't
>even know the frequency pair the local repeater(s?) uses.

I bought one at Dayton for use as a backup, knock-about radio. It works
pretty good. You don't need any other accessories (though you may later
want some). It is definitely bare bones compared to most of the other full
power HTs out there, but it works as advertised and is certainly cheap
enough.

The only other things you might really want are an external antenna
for use at home or in the car (that's true for any HT) and one or both
of the DC cables to let you run it off external power at home and in
the car. It only makes 1.5 watts on the AA batteries, but if you feed it
13.8 VDC, it will make 5 watts. That extra power may be necessary
depending on the path loss to a particular repeater you may want
to use.

Battery life on the AAs is pretty good, so you probably won't want to
bother with the rechargeable batteries, especially if you buy the DC
power cords. Speaker-mics are a personal preference item. I don't
use them very often. The tone decoder is also a luxury item. You probably
won't need it or use it. The radio has tone *encode* built in so you can
access tone squelched repeaters without buying anything extra.

If you haven't operated VHF FM, it is a very different operating
style than you're used to on HF. Listen a bit before jumping in.
Most of the activity revolves around club repeaters. They tend
to serve as watering holes for groups of local hams. You may
want to join one of the clubs if what you hear on their repeater
strikes your fancy.

Every repeater tends to develop its own personality. If you don't
like one, try another. Repeaters are extensions of local social
clubs, and as with any club scene, you may fit in better with one
than with another. (Note, you usually don't have to be a club
member to use a repeater, but if you use it often you should
consider supporting the club which sponsors it.)

Have fun. The VHF scene is a very good way to meet and
make friends with locals. And once you do, you'll use it as

an intercom to keep in touch with them and plan activities
together. There's also a public service aspect. You may
find that there's a local Skywarn group or ARES group that
you want to join too. With the crazy weather we're having,
they perform a very valuable service.

Non-standard :-) ?

This is a type A plug conforming to the EIAJ RC-5320 standard.

There are 4 such plugs, usually recognized by their yellow plastic insert,
that are sized according to voltage range. Almost all Japanese portable
electronics have used these for the past 3 years.

>Any ideas? Are there any other gadgets out there that use the
>same connector?

Radio Shack has sets of these designed for use on wall warts using their
"Adaptaplug" interchangeable plugs. One set has slide electrode,s the
other bi-pin. With a little work you could connect one of these to another
power supply.

Does the 'mil-spec' include the enclosure? It might not. It may be the case material only that meets mil spec. Ever seen a piece of military gear packaged like an FT-50? At any rate anyone can have bad luck with a product, why not just fix the damn thing and move on? Lousy products? hardly, there are thousands of satisfied users so all of a sudden Yaesu sucks because YOU had a problem. I don't think so.

From: Jay Kobelin <pcb4u@ix.netcom.com>
Message-ID: <357219EF.6C19@ix.netcom.com>
Source record: 142355

Has anyone tried to interpret the TTL data stream that comes out of the TS950 series radio from its main CPU?

The manual supplied with the radio shows an output for the "IF" command (information command) and data positions. It doesn't explain what the format is (octal, hex, whatever), what the actual stream looks like, start-stop conditions, etc.

I am trying to interpret the data from the INFORMATION command to read only the frequency component.

Thanks

Jay

6251. Icom 820H cross band repeat?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: Royal Moore <royald@ipeg.com>
Message-ID: <35721039.574FDEF2@ipeg.com>
Source record: 142356

I have an Icom IC-820H and would like to use it to cross band repeat. I know this much; a diode must be installed between D27 and D28 on the logic unit. I do not know where this location is exactly. The components are not labled and most are surface mount devices. Their are several diodes all in a row just to the left of the main tuning control on the pc board and I suspect these are the items I should be interested in. There are pc pads for eight diodes and five are installed at this time. This must also change the Recvr. coverage of the radio. The manual specs the two meter side at 136 to 174 Mhz but mine is limited to 139 to 149 Mhz. This seems odd but the board shows no signs of tampering so it must have been a factory default setup. I purchased this radio used and would like to be able to utilize all of its functions.
Any assistance would be appreciated and welcomed.

Al,

The intermod is bad - at least on 2m where I have had a chance to test it. The battery life is a little on the short side, but it helps if you run low power TX. The antenna is too long for comfort, but probably too short to be any good for 6m.

Nice radio otherwise. I like the layout and it is easy to use. Quite intuitive to use, except for a few - more advanced - features. I like the ability to receive the BCL FM band.

The following books are for sale:

Electrical Machines by Siskind - both DC and AC motors and generators - 2nd edition - 1959 - book in good shape $ 12

Direct and Alternating Current Machinery by Rosenblatt - 1963
This one has some motor diagrams drawn in by someone (not me) inside the front cover. Doesn't distract from book, and maybe makes it better, but not in "new" shape. Otherwise, book is in fine shape. $ 12

Electric Circuits and Machines by Lister - 5th edition - 1975
Technician level (not as much depth)
Covers basic electrical theory and then into motors and generators.
We used it for a course that we taught to mechanical students.
Some marks inside, where I have used it (problems marked, etc.)
$ 10

Prices do not include shipping from NE Ohio.

Thanks.

I have an IC720A with PLL voltage lock problems.

The rig did work, but was off frequency. But when I tried to align it as per the two books I own, the PLL voltages in the L4 and L18 circuit will not set properly.

I know the books have many type-o's, am I doing somthing wrong?

Please help!!!!!!!!

For Sale: Standard Bencher Paddle. Good Condition. Black base, Iambic style dual clear paddles. All original, $50 + shipping. Money Order only.

Thanks,

Chris KX0Y

6270. FS: Vibroplex 1952 "Original"

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: tubepwr813@aol.com
Message-ID: <1998053102004000.WAA02099@ladder01.news.aol.com>
Source record: 142397

For sale: 1952 Vibroplex "Original", SN# 172363. All chrome is very good however, the unit is not perfect. Many years ago it was modified to be used with a keyer. The base is original, but was black wrinkle originally and now is chrome as chrome was under the paint. The damper is missing, I have made one that works. The spring portion is fixed to vibrate and works quite well. All other items are original, including the black and red paddle. This unit can easily be made original. $80 + shipping. Money Order only.

Thanks,
Chris KX0Y

If you interpreted the First Amendment like you do the Second then,
you don't have any such right. It would only be government employees
that have those rights.

Of course you're not. You have to bob and weave all over the
internet so that no one can figure out where to respond to. I knew
that you wouldn't hang around TPG for very long. You ain't got the
nads for a real debate. Infact you aint got the nads for a debate on
any subject.

Don't take this as a flame, but you're incorrect about the tabs on the back of the mic. I install Motorola radios and the mic clip
with this type of mic does not have to be grounded for the scan, etc to operate. Some mics do have to be grounded, but not this one.

6280. FS List with pictures

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: Bill <bill@halcyon.com>
Message-ID: <01bd8c46$3d77c260$3b203fce@bill.halcyon.com>
Source record: 142407

I am selling some of the items I am no longer using. Each item on the list
below has a hot link to a picture or pictures of the item.

My terms of sale are as follows:
I will not ship outside the US.
Payment should be by cashiers check or money order.
Buyer pays shipping and insurance.

You can view my high integrity rating on eBay. My name there is "bill".

You may contact me by email at bill@halcyon.com

Here are the items!

MM-3 Keyer

This is one of the famous keyers from AEA. These are now collector's
items. AEA has not sold them for about 3 years now. There won't be any
more of these!

The keyer has more features than any I have ever used, memory, contest
mode, contest simulator, serial number, paddle reverse, and much more. I
have included a picture of the label on the front of the keyer that has a
list of all of the functions. The keyer comes with a manual.

The link to the function label is below:

http://www.halcyon.com/pub/users/bill/mm3-lab.jpg

The front of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-fnt.jpg

The rear of the keyer can be viewed at:

http://www.halcyon.com/pub/users/bill/mm3-rear.jpg

Sale price is $150.00

Kenwood TS-450S

This is an all band HF rig. It is in good shape with just a few minor
scratches on the case. There are no accessories or a manual.

If you have been looking for an inexpensive HF rig with all the
bells-and-whistles this is the rig for you.

Because of its small size and handle this rig would make a perfect
DX-pedition transceiver!

A picture is available at:

http://www.halcyon.com/pub/users/bill/TS-450S.jpg

The sale price is $700.00.

6282. Help Moto. HT 90

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: Don Jennings <ki0eo@frontiernet.net>
Message-ID: <3570D886.5E5F@frontiernet.net>
Source record: 142409

Hello,
I'm posting this for a friend of mine who has a motorola HT 90 that is
crystalled in the 460 mhz. range.
The question is, has anyone ever crystalled the ht 90 down to the 440
mhz ham band?
If so did you have to lengthen the resonator coils or was the radio able
to tune that low?
My friend would like to crystal it to get into my 440 repeater.
Thanks in advance !
Don

6285. Amidon Assortment Kits

Newsgroup: rec.radio.amateur.equipment
Date: 1998-05-31 00:00:00 UTC
From: tracy@orlando.com
Message-ID: <3570fdd5.56001915@news.earthlink.net>
Source record: 142412

This is a Request For Comment. Replies to this RFC should be addressed to tracy@bytemark.com, with the subject line RE: Amidon Assortment Kits. (Simply reply to this message.)

Currently, Amidon offers six (6) assortment kits of powdered iron and ferrite cores. Although popular, they scarcely represent the assortments that would seem desirable to the experimenter or project builder.

We would like to expand this line of kits to include more targeted assortments. Do you find yourself ordering the same basic bag of parts when you order toroids or beads? If you have suggestions for logical assortments or specific bundles, please let us know. We will take the most popular suggestions and offer them as new additions to the assortment line.

We would also like to offer kits for specific projects published in various journals. If anyone is willing to compile a comprehensive list of these projects and their required Amidon components, contact tracy@bytemark.com to arrange compensation for your efforts.

We have a history of providing excellent discounts on the various kits and special assortments. The current six assortments generally save 30% to 50% over purchasing the components separately. We expect that we will be able to bring any new assortments into the product line with similar savings.

Any assistance offered in this area will be most appreciated and will benefit the experimenter / builder community as a whole by allowing Amidon, as a long standing provider of inductive components, to more precisely serve your needs.

Thank you in advance for your suggestions,
Tracy Markham, N4LGH

It does seem a little funny when we spend upwards of $300. on a piece of electronic equipment, but absolutely refuse to expend about 10% of that cost for a protective case.

> for use on a Yaesu FT-50?

The Comet SMA-3 is an excellent performer. I like how it "mates" with the FT-50's SMA, too - it does show a little metal, but the mating surfaces match up well in circumference. Some have suggested finding a little "O" ring to fill the gap (cosmetics only).

> Also, I ordered a new owners manual from them and there is a postcard size
> paper insert that has a warning about using some aftermarket antennas that
> don't have some part recessed and can damage the sma connector on the radio.
> Anyone know what they are talking about?

Got the same "warning" with my Vertex FX-10. I CAREFULLY screwed the SMA-3 on, felt when the inside connector mated with the units, and know that they fit welltogether (on the FT-50, too). The wording on that warning is a little weird - they make it sound like "electrically" you have to use caution. It appears as if it's only cosmetics in question...at least with the SMA-3.

"Thierry Guichon" <tguichon@ix.netcom.com> wrote:

>Does anybosy has any comment (good or bad) on the IC821H,?

Thierry,

I have used an IC-821H for nearly a year now, mainly for SSB work on 2 m. I also have a lot of other radios, including an FT-221RD with muTek front end, an IC-202S (not with a muTek front end *yet*), etc. The IC-821H is every bit as sensitive as those, and it is also quite good at handling big signals. I expect that the 202S will be much superior when it has the muTek front end, but that is an exceptional radio.

I also use the 821H with a TE 350 W linear, and with that combination and 4 by 7 el Eagle beams, I can work out to 700 km or more even under quite poor conditions. I have also done a little contesting (again 2 m SSB) without any problems. During some contests, I have a 400 W 4 by 17 el /P station operating within 1 km of my QTH: although this makes it hard to work within +/- 20 kHz of them, I have managed QSOs even within that. So even such a big signal does not drown the 821H completely!

Some really nice features about the 821H include the speech compressor, which makes its 35 W very effective, variable output from 4 to 35 W (PEP, measured by me), and easy use of controls. It is also now pretty well the only 'real' all-mode 2 and 70 rig available, I think, and much superior to the 2 m facilities on the new HF+VHF rigs (IC-746 and the FT-847).

The one thing it does need is a good pre-amp: my linear has a 15 dBW pre-amp which makes the S-meter more sensible. Otherwise almost all your DX is at a meter indication of S0! (Of course the pre-amp does bring some signals out as well). The 821H does not have any DSP facilities, so I use it with a Timewave DSP-599zx, which is an excellent combination. What would I like to add to the 821H? Probably a bandscope as on my IC-756, perhaps IF DSP.

Would I buy an 821H again? Certainly!

I hope that helps,
73,
Howard M1BWR in IO90JO, on 6 m (IC-756) and 2 m (IC-821H)

You buy a HF transmitter and the antenna costs 10% - 50% of the
transmitter. What a bull****. Get away from ham radio. That's
the best way to save $$.
